## VISION SERIES

The Vision Series video panels offer the highest quality LED binning and bright, clear output. All models are front and rear serviceable. Each model has 4 individual mini modules for quick and easy servicing. All models are built on the same frame allowing panels with different resolutions to be used together. The Vision Series panels use the same rigging bar and all fit into the same road case. All models have moveable corner protects that safe guard the corners while they are not connected. There are magnets on the top and bottom of the panels that allow users to temporary connect two panels together, let go of the panels, then securely latch them on the rear. This allows for a single user to install a full wall of panels.

There are 4 LED modules per panel. This allows for easy serviceability. The panel connections include PowerLock In/Out and DataLock In/Out. Each panel features the Novastar A5s receiving card built-in. Up to 8 VS2, VS3 or VS5 video panels fit inside the VSFC8 flight case, and up to 8 VS3IP panels fit in the VS3IPFC8 flight case. Hang up to 20 VS Series Video Panels vertically with the VSRB1 rigging bar.

ADJ offers full packages with video processors, software, cabling, rigging bars and flight cases so that you have everything you need to get up and running.
