Important Safety Instructions

Consignes de sécurité à lire attentivement

This power amplifier can produce dangerous output voltage, power and sound pressure levels. In order to minimize the risk of injury, damage, or hearing loss, please read the entire owner's manual.

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. To reduce the risk of fire or electric shock, do not expose this apparatus to rain or moisture.
6. Do not use this apparatus near water.
7. Clean only with dry cloth.
8. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
9. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
10. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong is provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
11. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
12. Only use attachments/accessories specified by the manufacturer.
13. Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
14. Unplug this apparatus during lightning storms or when unused for long periods of time.
15. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
16. To completely disconnect this apparatus from the AC mains, disconnect the power supply cord plug from the AC receptacle.
17. The mains plug of the power supply cord shall remain readily accessible.

Cet amplificateur de puissance peut produire un voltage et une pression acoustique qui pourrait être dangereuse ou pourrait même causer des problèmes ou perte accuité auditive. Consultez le manuel d'instruction et observez les consignes.
Introduction

Congratulations on your purchase of an Ashly KLR-Series amplifier. The KLR-Series is made up of powerful, high-efficiency, lightweight amplifiers incorporating the latest technologies. We are confident that you will be pleased with the high performance, superb sound quality, reliability, and more.

About Ashly

Ashly Audio was founded in 1974 by a group of recording engineers, concert sound professionals, and electronics designers. The first products were elaborate custom consoles for friends and associates, but business quickly spread to new clients and the business grew. The philosophy we established from the very beginning holds true today: to offer only the highest quality audio tools at an affordable cost to the professional user – ensuring reliability and long life. More than thirty years later, Ashly remains committed to these principles.

FCC Compliance

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference
2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in both a commercial and residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
The KLR Series

KLR-Series amplifiers are high-efficiency, lightweight high power amplifiers incorporating the latest amplifier technologies.

The series provides a power range of 1000 to 2500 watts per channel at 2 ohms (20Hz-20kHz, 1% THD). The KLR series is available in 2 channel versions at four power points. All models will drive 2, 4, or 8 ohm loads.

*The KLR 3200 can also be used as a two channel 70V distributed output amplifier providing up to 800W per channel. For 70V applications, Ashly recommends setting the amplifier’s HiPass filter switch to 50Hz (see page 5).

- Inputs are via 3-pin Euroblock, XLR, and ¼” TRS connectors.
- Switch mode power supply provides high efficiency and low weight
- Output connectors are four pin Speakon type.
- Rear panel switches include: Gain and Operation Mode, Limiter, and HPF.
- Forced air cooled (front panel intake, rear panel exhaust)
- Front panel indicators for output level, clip/protect, and power on/off
- Gain selectable switch for both channels
- Removable dust filters on front panel
- Rack ears for permanent installation in a standard 2RU 19”(rack mount width) enclosure

Protection

KLR-Series Amplifiers come standard with several protection circuits:

- Output over-current protection
- DC output protection
- Chassis internal temperature monitoring
- Inrush limiting
- Mains circuit breaker (Mains fuse used in KLR-5000)

WARNING: Do not remove the mains connector ground.
Physical Description

Each model in the KLR-Series is 2RU. The model number is indicated on the left side of the front panel.

Amplifier Front Panel

1. Mounting Holes – For rack mounting.
2. Air Inflow Vents – Cool air enters here.
3. Channel Attenuators – These knobs adjust the attenuation of the input signal of each channel from $\infty$ to 0.
5. Power Switch and LED – Switches the unit on or off. The KLR 2000, KLR 3200, and KLR 4000 use a switch with a built in mains circuit-breaker. The KLR 5000 uses a non-breaker switch and an internal mains fuse instead.
6. Rack Handles – Handles on newer models can be removed using a 3mm hex wrench.

Amplifier Rear Panel  (Note: KLR 5000 rear panel has different feature locations)

1. AC Cord – For connection to the AC mains
2. CH 1, CH 2, Bridged Output Connector – This connector provides the amplifier’s Channel 1, channel 1 and 2, or bridged output.
3. CH 2 Output Connector – This connector provides the amplifier’s Channel 2 output.
5. Gain Switch – The Gain switch sets the gain for both channels. Gain selections vary between models. Check specifications for each model.
6. Mode Switch – This switch selects the amplifier’s operating mode (Bridge, Stereo, or Parallel Mono).
7. 3-Pin Euroblock Input Connectors – These connectors are used for balanced or unbalanced input signals. For parallel mode or bridged mode, use INPUT 1 only.
8. Combination XLR, 1/4" TRS Input Connectors – These connectors are used for balanced or unbalanced input signals, and are wired in parallel with the Euroblock connector.
9. Limiter Switch – This switch engages the limiter. There is a separate limiter for each channel.
10. HPF Switch – This switch selects the input HiPass filter to 30Hz, 50Hz, or Off.
Installation

KLR-Series amplifiers are designed for use in both fixed and mobile sound systems. Each amplifier is shipped (unless otherwise specified) with the following factory settings:

<table>
<thead>
<tr>
<th>Front panel:</th>
<th>Rear panel:</th>
</tr>
</thead>
<tbody>
<tr>
<td>On/Off Switch = Off</td>
<td>High Pass Filter(s) = Off</td>
</tr>
<tr>
<td>Attenuators = ∞</td>
<td>Gain Selector = Max Gain Position</td>
</tr>
<tr>
<td></td>
<td>Mode Selector = Stereo</td>
</tr>
<tr>
<td></td>
<td>Limiter Switch = Off</td>
</tr>
</tbody>
</table>

Before connecting to mains power, make sure that the switches are set to the configuration needed for your particular application. Always switch the amplifier off before making any changes to the settings. Failure to do so could result in damage to the unit or other components in your system. **CAUTION:** When mounting or connecting the amplifier, always disconnect it from the mains. Use four screws and washers when mounting the amplifier to the front rack rails. Rear support is also recommended, especially for mobile or touring use. To reduce the risk of fire or electric shock, do not expose this apparatus to rain or moisture.

**Requirements**

KLR-Series amplifiers have specific physical, electrical and signal requirements for proper operation. These requirements will vary depending on your specific application, setup, and the settings on the amplifier. When setting up and testing your system, please take special care to double check all connections and settings. Please refer to the specifications section of this manual for specific input, output and other figures.

**Installation Density**

KLR-Series amplifiers produce substantial power output from a small chassis. When driven at the higher-end of their potential, they do produce heat that must be dissipated. In cases where multiple KLR amplifiers are mounted together (or a single KLR with other equipment), it is recommended that a 1RU space is left between units to allow for proper air circulation. If the amplifier overheats, it will go into ‘thermal’ protect mode to prevent damage to itself and any connected components and speakers.

**KLR Dimensions**

![KLR Dimensions Diagram]

- **H** = 3.47” (88.1mm)
- **W** = 17.6” (447mm)
- **D** = 16.0” (406mm)
- **D1** = 1.5” (38.1mm)
Typical Applications  *(Note: KLR 5000 not shown – see page 5)*

**STEREO Mode**

The most common use of a KLR-Series amplifier is a 2-channel source driving 2 speaker channels. In this illustration, the amplifier is receiving a stereo signal and is driving two stereo speakers. The amplifier is in STEREO mode.

**PARALLEL Mode**

Another use of a KLR-Series amplifier is a single channel source driving both speaker channels. In this illustration, the amplifier is receiving a signal and is driving both channel speakers with the same signal. The amplifier is in PARALLEL mode.

**BRIDGE Mode**

KLR-Series amplifiers are well suited to BRIDGED operation to drive a speaker load such as a subwoofer. This illustration shows a KLR driving a signal in BRIDGED mode. Note the special wiring to the channel 1 connector for Bridge mode. Minimum Bridged load impedance is 4Ω (2Ω per channel).
Connectors & Polarity

KLR-Series amplifiers utilize three types of professional audio connectors. For the inputs, 3-pin Euroblock connectors are utilized with their polarity clearly marked on the amplifier’s rear panel, and combination XLR and 1/4” phone jack are all wired in parallel. Outputs are four pin Speakon type connectors. The polarity for these connections is marked on the unit’s chassis. Note that polarity changes when the unit is operated in BRIDGED mode. Be sure to read the Operation section of this manual for important information on the operating modes.

**Speaker Connections** *(Note: KLR 5000 speaker outputs not shown – see page 5)*

![Speaker Connections Diagram]

**Stereo Speaker Wiring**

In this mode, the amplifier’s channels operate fully independent of each other. Each signal enters the unit and is amplified separately and wired using different connectors.

![Stereo Speaker Wiring Diagram]

**Stereo Speaker Wiring Using Single 4-Conductor Speaker Cable**

In this mode, the amplifier’s channels still operate independent of each other. Each signal is amplified separately, however both channels are wired using the Channel 1 connector.

![Stereo Speaker Wiring Using Single 4-Conductor Speaker Cable Diagram]

**Bridged (Mono) Mode**

In this mode, a single input is connected to channel 1 and is connected to the two output channels that have been “Bridged” together using the Channel 1 connector. Minimum Bridged load impedance is 4Ω.
## Troubleshooting

Ashly Audio Inc. LIMITED WARRANTY (USA ONLY)

(Other countries please contact your respective distributor or dealer.)

For units purchased in the USA, warranty service for this unit shall be provided by ASHLY AUDIO, INC. in accordance with the following warranty statement.

ASHLY AUDIO, INC. warrants to the owner of this product that it will be free from defects in workmanship and materials for a period of FIVE years from the original-date-of-purchase. ASHLY AUDIO INC. will without charge, repair or replace at its discretion, any defective product or component parts upon prepaid delivery of the product to the ASHLY AUDIO, INC. factory service department, accompanied with a proof of original-date-of-purchase in the form of a valid sales receipt. This warranty gives you specific legal rights, and you may also have other rights, which vary from state to state.

EXCLUSIONS: This warranty does not apply in the event of misuse, neglect, or as a result of unauthorized alterations or repairs made to the product. This warranty is void if the serial number is altered, defaced, or removed. ASHLY AUDIO, INC. reserves the right to make changes in design, or make additions to, or improvements upon, this product without any obligation to install the same on products previously manufactured.

Any implied warranties, which may arise under the operation of state law, shall be effective only for FIVE years from the original-date-of-purchase of the product. ASHLY AUDIO, INC. shall be obligated to only correct defects in the product itself. ASHLY AUDIO, INC. is not liable for any damage or injury, which may result from, or be incidental to, or a consequence of, such defects. Some states do not allow limitations on how long an implied warranty lasts, or the exclusion, or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

OBTAINING WARRANTY SERVICE:

For warranty service in the United States, please follow this procedure:

1) Return the product to ASHLY AUDIO, INC. freight prepaid, with a written statement describing the defect and application that the product is used in. ASHLY AUDIO, INC. will examine the product and perform any necessary service, including replacement of defective parts, at no further cost to you.

2) Ship your product to:

ASHLY AUDIO, INC.
