EMC Information

FEDERAL COMMUNICATIONS COMMISSION INTERFERENCE STATEMENT: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

The device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**FCC Caution:** Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

**CE Warning:** This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

**KCC Statement**

이 기기는 업무용 A급 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정 외의 지역에서 사용하는 것을 목적으로 합니다.

Suggestion: Shielded twisted pair (STP) cables must be used with the unit to ensure compliance with FCC & CE standards.
RoHS

This product is RoHS compliant.

User Notice

All information, documentation, and specifications contained in this manual are subject to change without prior notification by the manufacturer. The manufacturer makes no representations or warranties, either expressed or implied, with respect to the contents hereof and specifically disclaims any warranties as to merchantability or fitness for any particular purpose. Any of the manufacturer's software described in this manual is sold or licensed as is. Should the programs prove defective following their purchase, the buyer (and not the manufacturer, its distributor, or its dealer), assumes the entire cost of all necessary servicing, repair and any incidental or consequential damages resulting from any defect in the software.

The manufacturer of this system is not responsible for any radio and/or TV interference caused by unauthorized modifications to this device. It is the responsibility of the user to correct such interference.

The manufacturer is not responsible for any damage incurred in the operation of this system if the correct operational voltage setting was not selected prior to operation. PLEASE VERIFY THAT THE VOLTAGE SETTING IS CORRECT BEFORE USE.

Battery Safety Notice

- There is a risk of explosion if the battery is replaced with an incorrect type. Dispose of used batteries according to the relevant instructions.

Batterie avis de sécurité

- Il existe un risque d'explosion si la batterie est remplacée par un incorrect tapez. Jeter les piles usagées selon la pertinente instructions.
Package Contents

The KVM over IP switch package consists of:

1. KN2116VA / KN4116VA / KN2132VA / KN4132VA / KN8132V / KN4164V / KN8164V Switch
2. Power Cords
1. Mounting Kit
2. Lok-U-Plugs
1. Lok-U-Plug Installation Tool
2. SA0142 Serial Adapters
1. Foot Pad Set (4 pcs.)
1. User Instructions*

Check to make sure that all of the components are present and in good order. If anything is missing, or was damaged in shipping, contact your dealer.

Read this manual thoroughly and follow the installation and operation procedures carefully to prevent any damage to the switch or to any other devices on the installation.

* Features may have been added since this manual was published. Please visit our website to download the most up to date version of the manual.

About This Manual

This User Manual is provided to help you get the most from your KVM over IP switch system. It covers all aspects of installation, configuration and operation. An overview of the information found in the manual is provided below.

Overview

Chapter 1, Introduction, introduces you to the KVM over IP switch. Its purpose, features and benefits are presented, and its front and back panel components are described.

Chapter 2, Hardware Setup, provides step-by-step instructions for setting up your installation, and explains some basic operation procedures.

Chapter 3, Super Administrator Setup, explains the procedures that the super administrator employs to set up the KVM over IP switch network environment, and change the default username and password.

Chapter 4, Logging In, describes how to log in to the KVM over IP switch with each of the available access methods: from a local console; an Internet browser; a stand-alone Windows application (AP) program; and a stand-alone Java application (AP) program.

Chapter 5, The User Interface, describes the layout and explains the components of the KVM over IP switch user interface.

Chapter 6, Port Access, describes the Port Access page and how to configure the options it provides regarding port and power outlet manipulation.

Chapter 7, User Management, shows super administrators and administrators how to create, modify, and delete users and groups, and assign attributes to them.

Chapter 8, Device Management, shows super administrators how to configure and control overall KVM over IP switch operations.

Chapter 10, Maintenance, explains how to upgrade the KVM over IP switch firmware, as well as the firmware of the KVM Adapter Cables used to connect its ports to the installed devices.

Chapter 11, Download, describes how to download stand-alone AP versions of the Win Client, the Java Client, the Log Server, and Power Over the Net (PON) programs.

Chapter 12, Port Operation, provides detailed information on accessing and operating the devices connected to the KVM over IP switch’s ports.
Chapter 13, *The Log Server*, explains how to install and configure the Log Server.

An Appendix, at the end of the manual provides technical and troubleshooting information.

**Conventions**
This manual uses the following conventions:

- **Monospaced** indicates text that you should key in.
- **[]** indicates keys you should press. For example, [Enter] means to press the **Enter** key. If keys need to be chorded, they appear together in the same bracket with a plus sign between them: **[Ctrl+Alt]**.
- 1. Numbered lists represent procedures with sequential steps.
- ♦ Bullet lists provide information, but do not involve sequential steps.
- → Indicates selecting the option (on a menu or dialog box, for example), that comes next. For example, Start → Run means to open the Start menu, and then select Run.
- ! Indicates critical information.
Terminology
Throughout the manual we make reference to the terms Local and Remote in regard to the operators and equipment deployed in a KVM over IP switch installation. Depending on the point of view, users and servers can be considered Local under some circumstances, and Remote under others:

- **Switch’s Point of View**
  - Remote users – We refer to a user as a Remote user when we think of him as someone who logs into the switch over the net from a location that is remote from the switch.
  - Local Console – The keyboard mouse and monitor connected directly to the switch.
  - Servers – The servers attached to the switch via KVM Adapter Cables.

- **User’s Point of View**
  - Local client users – We refer to a user as a Local client user when we think of him as sitting at his computer performing operations on the servers connected to the switch that is remote from him.
  - Remote servers – We refer to the servers as Remote servers when we think of them from the Local Client User’s point of view – since, although they are locally attached to the switch, they are remote from him.

When we describe the overall system architecture we are usually speaking from the switch’s point of view – in which case the users are considered remote. When we speak about operations users perform via the browser, viewers, and AP programs over the net, we are usually speaking from the user’s point of view – in which case the switch and the servers connected to it are considered remote.

Product Information
For information about all ALTUSEN products and how they can help you connect without limits, visit ALTUSEN on the Web or contact an ALTUSEN Authorized Reseller. Visit ALTUSEN on the Web for a list of locations and telephone numbers:

Overview

The KN2116VA / KN4116VA / KN2132VA / KN4132VA / KN8132V / KN4164V / KN8164V switches are IP-based KVM control units that allow both local and remote operators to monitor and access multiple servers from a single console. The KN8 Series series can control up to 16/32/64 servers, and by cascading compatible KVM switches, as many as 512 servers can be controlled on a complete two stage installation. The KN8 Series of KVM over IP switches provide superior video quality with resolutions up to 1920 x 1200, faster virtual media transmission speeds for accessing USB drives and support of IPS 140-2 level 1 security standards.

The KN8 Series of switches are differentiated according to the number of buses they support and the number of KVM ports they provide – as shown below:

<table>
<thead>
<tr>
<th>Model</th>
<th>Bus Support</th>
<th>KVM Ports</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

Each bus permits a separate user session so that up to 3 (1 Local; 2 Remote), 5 (1 Local; 4 Remote) or 9 (1 Local; 8 Remote) concurrent independent connections to the attached servers can take place. The diagram on the next page shows how the KN8164V switch can be connected and accessed locally and remotely.
Since the switches use TCP/IP for their communications protocol, they can be accessed via their IP addresses from anywhere on the LAN, WAN, or Internet – whether the connecting computer is located down the hall, down the street, or half-way around the world. Remote operators can log in via their browser or make use of stand-alone Windows or Java GUI applications. Java allows the switches to work with JRE (Java Runtime Environment) enabled operating systems – ensuring multi-platform operability.

The client software allows operators to exchange keyboard, video and mouse signals with the servers attached to the switches just as if they were present locally and working on the equipment directly.

Up to 32 users can share the switch’s buses. A Message Board feature allows them to communicate with each other to facilitate port sharing.

Administrators can handle a multitude of maintenance tasks with ease – from installing and running GUI applications, to BIOS level troubleshooting, routine monitoring, concurrent maintenance, system administration, rebooting and even pre-boot functions.

Local console operation is easily accomplished by entering hotkey combinations from the keyboard with a full screen GUI display.

Monitoring the installation’s activities couldn’t be easier. A convenient Auto Scan feature permits automatic switching from port to port at user-specified intervals, while the Panel Array Mode can display the video output of up to 42 servers at the same time.

The switches feature RJ-45 connectors allowing them to use CAT 5e cable to link to the servers. This space-saving innovation means that a full 16/32/64
port switch can be conveniently installed in a 1U-/2U system rack, and the installation can take advantage of the internal network wiring built into most modern commercial buildings.

Setup is fast and easy; plugging cables into their appropriate ports is all that is entailed. Because the switch intercepts keyboard input directly, there is no need to get involved in complex software installation routines, or to be concerned with incompatibility problems.

Since the firmware is upgradeable over the Net, you can stay current with the latest functionality improvements simply by downloading firmware updates from our website as they become available.

With its powerful security features, the KVM over IP switch provides the fastest, most reliable, most cost effective way to remotely access and manage widely distributed multiple server installations.

KVM over IP switches have an Adapter ID function that stores port information like the adapter ID, OS, keyboard language, adapter name, operation modes and more, so that when you move a KVM Adapter Cable from one port to another, the switch recognizes the same adapter cable at the new location. Also, for greater ease of use when moving the adapter cable to another switch, the adapter ID, OS, keyboard language, adapter name, and operation modes of the port stay with the adapter.

The KN8 V-Series supports advanced virtual media functions that allow higher transmission speed and mapping of USB DVD/CD/hard drives and other storage media directly to a server. Virtual media support allows you to conduct file transfers, install applications and OS patches and perform diagnostics remotely. You can upgrade your entire installation from a single remote console located anywhere in the world.

The KN8 models offer dual power supplies so that if one of the power supplies fails, the second power supply automatically takes over. In addition to supporting dual power, they guard against power failure from your server room outlets. If your server room has more than one power source, connecting the power supplies to different power sources is a wise choice. If one of the server room power supplies loses power, the switch will automatically adjust the power it draws from the second source to keep functioning.

The KN2116VA / KN4116VA / KN2132VA / KN4132VA / KN8132V / KN4164V / KN8164V models support temperature sensors that can control internal fans. The sensors regulate the fans so that they run at optimum speed depending on the server room temperature – throttling down when necessary, to use energy more efficiently and prolong the life of both the fans and the switch.
The KN8 Series are also audio enabled. Microphone and speakers are supported on the Local Console for the servers; speakers are supported on the remote users’ computers.
Chapter 1. Introduction

Features

Hardware

- High port density – RJ-45 connectors and Cat 5e/6 cable connect up to 16-ports (KN2116VA / KN4116VA) or 32-ports (KN2132VA / KN4132VA / KN8132V) in a 1U housing; or 64-ports (KN4164V / KN8164V) in a 2U housing
- Separate buses provide 2/4/8 remote connections for KVM over IP access
- Two 10/100/1000 Mbps NICs for redundant LAN or two IP operation
- Supports PS/2, USB, Sun Legacy (13W3) and serial (RS-232) connectivity
- Local console provides USB keyboard and mouse support
- Supports multi-platform server environments: Windows, Mac, Sun, Linux and VT100 based serial devices
- High video resolution – up to 1920 x 1200 @ 60Hz – 24 bit color depth at the local console up to 50 m from the computers; up to 1920 x 1200 @ 60Hz with 24 bit color depth for remote sessions
- Monitor and control up to 16, 32 or 64 computers on a single level, or control up to 512 computers in a cascade*

* Cascade-compatible KVM Switches include the following: CS9134, CS9138, CS88A, KH1508, KH1516, KH1508A, and KH1516A

Management

- Up to 64 user accounts – up to 32 users simultaneously share the control
- End session feature – administrators can terminate running sessions
- Event logging and Windows-based Log Server support
- Critical system event notification via SMTP email; SNMP trap and Syslog support
- Customizable event notification
- Firmware upgradable
- Out-of-Band Access-Modem dial-in/dial out/dial back support
- Adapter ID Function: Stores port information allowing administrators to relocate the servers to different ports, without having to re-configure the adapters and switches.
- Port Share Mode allows multiple users to gain access to a server simultaneously
Integration with ALTUSEN CC2000 Management software

Power Association enables the switch’s KVM ports to be associated with a PDU’s power outlets for remote power management of the servers from the switch’s interface

Manage browser access (Browser, http, https)

IPv6 capable

**Easy-to-Use Interface**

- Local Console, browser based, and AP GUIs offer a unified multi-language interface to minimize the user training time and increase productivity
- Multiplatform client support (Windows, Mac OS X, Linux, Sun)
- Multi-browser support: Internet Explorer, Chrome, Firefox, Safari, Opera, Mozilla, Netscape
- Browser-based UI in pure Web technology allows administrators to perform administrative tasks without pre-installed Java software package required
- Launch multiple Virtual Remote Desktops to control multiple servers from the same login session
- Magic Panel
- Full-screen or sizable and scalable Virtual Remote Desktop
- Panel Array Mode available to both local console and remote access users
- Keyboard/Mouse Broadcast – keyboard and mouse inputs can be duplicated on all the attached servers
- Video syncing with the local console – local console monitor’s EDID information stored on the KVM Adapter Cables for display resolution optimization

**Advanced Security**

- Remote authentication support: RADIUS, LDAP, LDAPS, and MS Active Directory
- Supports TLS 1.2 encryption and RSA 2048-bit certificates to secure user logins from browsers
- Flexible encryption design allows users to choose any combination of 56-bit DES, 168-bit 3DES, 256-bit AES, 128-bit RC4, or Random for independent KB/Mouse, video, and virtual media data encryption
- Support for IP/MAC Filter
Chapter 1. Introduction

- Configurable user and group permissions for server access and control
- Automated CSR creation utility and third party CA certificate authentication

**Virtual Media**
- Virtual media enables remote file transfers, OS patching, software installations and diagnostic testing
- Works with USB enabled servers at the operating system and BIOS level
- Supports DVD/CD drives, USB mass storage devices, PC hard drives and ISO images
- Supports Smart Card Readers on computers connected with KA7166, KA7168, KA7169, KA7177 Adapter Cables

**Virtual Remote Desktop**
- Video quality can be adjusted to optimize data transfer speed; monochrome color depth setting, threshold and noise settings for compression of the data bandwidth in low bandwidth situations
- High-performance graphics for the best image quality
- Full screen video display or scalable video display
- Message Board for communication among remote users
- Mouse DynaSync™ automatically synchronizes the local and remote mouse movements
- Exit Macros support
- On-screen keyboard with multilanguage support
- BIOS-level access

**KN8 V-Series Exclusive**
- Advanced FPGA graphics processor for improved video quality
- Faster transmission speed (2x) for virtual media devices
- 2/4/8 separate buses for remote KVM over IP access
- Supports FIPS 140-2 level 1 security standards
System Requirements

Remote User Computers
Remote user computers (also referred to as client computers) are the ones the users log into the switch with from remote locations over the Internet (see Terminology, page xvii). The following equipment must be installed on these computers:

- For best results we recommend computers with at least a P III 1 GHz processor, with their screen resolution set to 1024 x 768.
- IE8 or above web browser
- Browsers must support TLS 1.2 encryption.
- For best results, a network transfer speed of at least 512kbps is recommended.
- For the browser-based WinClient ActiveX Viewer, DirectX 8 must be present, and at least 150MB of memory must be available after installation.
- For the browser-based Java Client Viewer the latest version of the Java Runtime Environment (JRE) must be installed, and at least 205MB of memory must be available after installation.
- For the Windows Client AP, DirectX 8 must be present, and at least 90MB of memory must be available after installation.
- For the Java Client AP, the latest version of the Java Runtime Environment (JRE) must be installed, and at least 145MB of memory must be available after installation.
- For the Log Server, you must have the Microsoft Jet OLEDB 4.0 or higher driver installed.

Servers
Servers are the computers connected to the switch via KVM Adapter Cables (see Terminology, page xvii). The following equipment must be installed on these servers:

- A VGA, SVGA or multisync port
- For USB KVM Adapter Cable Connections: a Type A USB port and USB host controller
- For PS/2 KVM Adapter Cable Connections: 6-pin Mini-DIN keyboard and mouse ports
KVM Adapter Cables

- Cat 5e (or higher) cable is required to connect the KVM over IP switch to the KVM Adapter Cables (see page 27).
- The following KVM Adapter Cables are required for use with the KVM over IP switch:

<table>
<thead>
<tr>
<th>Function</th>
<th>Module</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connect to devices with PS/2 ports</td>
<td>KA7120</td>
</tr>
<tr>
<td>Connect to devices with USB ports</td>
<td>KA7170</td>
</tr>
<tr>
<td>(All platforms – PC, Mac, Sun)</td>
<td></td>
</tr>
<tr>
<td>Connect to Sun Legacy Computers</td>
<td>KA7130</td>
</tr>
<tr>
<td>Connect to serial based devices</td>

</tr>
<tr>
<td>Connect to devices with USB ports, virtual media and audio support</td>
<td>KA7176</td>
</tr>
<tr>
<td>Connect to devices with USB ports, with virtual media, smart card reader support</td>
<td>KA7177</td>
</tr>
</tbody>
</table>

**Note:** If you use Adapter Cables purchased prior to your switch purchase, you may have to upgrade the Adapter’s firmware. (see page 200).
Operating Systems

- Supported operating systems for remote user computers include Windows 2000 and higher, and those capable of running the Java Runtime Environment (JRE) 6, Update 3, or higher (Linux, Mac, Sun, etc.).
- Supported operating systems for the servers connected to the switch’s ports are shown in the table, below:

<table>
<thead>
<tr>
<th>OS</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows</td>
<td>2000 and higher</td>

<tr>
<td>Fedora</td>
<td>Core 2 and higher</td>
</tr>
<tr>
<td>SuSE</td>
<td>9.0 and higher</td>
</tr>
<tr>
<td>Mandriva (Mandrake)</td>
<td>9.0 and higher</td>
</tr>
<tr>
<td>UNIX</td>
<td></td>
</tr>
<tr>
<td>AIX</td>
<td>4.3 and higher</td>
</tr>
<tr>
<td>FreeBSD</td>
<td>4.2 and higher</td>
</tr>
<tr>
<td>Sun</td>
<td>Solaris 8 and higher</td>
</tr>
<tr>
<td>Novell</td>
<td></td>
</tr>
<tr>
<td>Netware</td>
<td>5.0 and higher</td>
</tr>
<tr>
<td>Mac</td>
<td>OS 9 and higher*</td>
</tr>
<tr>
<td>DOS</td>
<td>6.2 and higher</td>
</tr>
</tbody>
</table>

Browsers

Supported browsers for users that log into the KVM over IP switch include the following:

<table>
<thead>
<tr>
<th>Browser</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>IE</td>
<td>8 and higher</td>
</tr>
<tr>
<td>Chrome</td>
<td>8.0 and higher</td>

<td></td>
</tr>
<tr>
<td>Windows</td>
<td>3.6 and higher</td>
</tr>
<tr>
<td>Linux</td>
<td>3.0 and higher</td>
</tr>
<tr>
<td>Safari</td>
<td></td>
</tr>
<tr>
<td>Windows</td>
<td>4.0 and higher</td>
</tr>
<tr>
<td>Mac</td>
<td>3.1 and higher</td>
</tr>
<tr>
<td>Opera</td>
<td>10.0 and higher</td>
</tr>
<tr>
<td>Mozilla</td>
<td></td>
</tr>
<tr>
<td>Windows</td>
<td>1.7 and higher</td>
</tr>
<tr>
<td>SUN</td>
<td>1.7 and higher</td>
</tr>
<tr>
<td>Netscape</td>
<td>9.0 and higher</td>
</tr>
</tbody>
</table>

* See Mac Systems, page 252, for further information.

| 4   | PON Port                 | This connector is provided for a Power over the Net™ (PON) unit which allows servers attached to the KVM over IP switch to be booted remotely over the net.  
See Single Stage Installation, page 27, step 6 for installation details. Contact your dealer for more information regarding PON units. |
| 5   | KVM Ports                | The Cat 5e cables that link the unit to the KVM Adapter Cables (which connect to the servers), plug in here.                                                                                      |
| 6   | Power Sockets            | The power cable(s) plugs in here. The left power socket corresponds to the left power switch, and the right power socket corresponds to the right power switch.                                      |
| 7   | Primary LAN Port         | The cable that connects the unit to the primary network interface (10/100/1000 Mbps) plugs in here.                                                                                              |
| 8   | Modem Port               | For dial in connection should the unit be unavailable over the network. See Single Stage Installation, page 27, step 7 for installation details.                                                     |
| 9   | Remote Console Port      | This port is reserved and will be available for use with future upgrades as a remote console port.                                                                                               |
| 10  | Local Console Port(s)    | The unit can be accessed via a local console as well as over the Net. The local console devices (USB keyboard, USB mouse, DVI-D or VGA monitor) plug in here.                                         |
This Page Intentionally Left Blank
Chapter 2
Hardware Setup

Overview

For convenience and flexibility that allows USB interfaces, as well as multiple platforms, the KVM over IP switch design utilizes KVM Adapter Cables, that serve as intermediaries between the switch and the connected devices (see Adapter Cable Connection Diagram, page 30 for details).

A separate KVM Adapter Cable is required for each server or device connection. The model numbers of the Adapters are given in the KVM Adapter Cables section, page 9.

Before You Begin

1. Important safety information regarding the placement and grounding of this device is provided on page 231 and onwards. Please review it before proceeding.

2. Make sure that the power to any device that you connect to the installation has been turned off. You must unplug the power cords
Stacking and Rack Mounting

The KVM over IP switch can be stacked on the desktop or rack mounted in a variety of ways. The following sections take you through the procedures for each method.

Stacking

The KVM over IP switch can be placed on any appropriate level surface that can safely support its weight plus the weight of its attached cables. To place the switch, or to stack multiple units, remove the backing material from the bottom of the rubber feet that came with your package, and stick them onto the switch’s bottom panel at the corners, as shown in the diagram, below:

Note: To ensure adequate ventilation, allow at least 5.1 cm on each side, and 12.7 cm behind the unit for power cord and cable clearance.
KN2116VA / KN4116VA / KN2132VA / KN4132VA / KN8132V

Rack Mounting

The KN2116VA / KN4116VA / KN2132VA / KN4132VA / KN8132V can be mounted in a 19" (1U) rack. The mounting brackets can screw into either the front or the back of the unit so that it can attach to the front or the back of the rack.

Rack Mounting - Front

To mount the unit at the front of the rack, do the following:

1. Remove the screws at the front of the unit.

2. Use the M3 x 8 Phillips head hex screws supplied with the rack mount kit to screw the rack mounting brackets into the front of the unit.
3. Position the device in the front of the rack and align the holes in the mounting brackets with the holes in the rack.

4. Screw the mounting brackets to the rack.

**Note:** Cage nuts are provided for racks that are not pre-threaded.
Rack Mounting - Rear
To mount the unit at the rear of the rack, do the following:

1. Remove the two screws at the rear of the unit.

2. Use the M3 x 8 Phillips head hex screws supplied with the rack mounting kit to screw the rack mounting brackets into the rear of the unit.
3. Position the device in the rack and align the holes in the mounting brackets with the holes in the rack.

4. Screw the mounting brackets to the rear of the rack.

**Note:** Cage nuts are provided for racks that are not prethreaded.
KN4164V / KN8164V Rack Mounting

The KN4164V / KN8164V can be mounted in a 19” (2U) rack. The mounting brackets can screw into either the front or the back of the unit so that it can attach to the front or the back of the rack.

Rack Mounting - Front

To mount the unit at the front of the rack, do the following:

1. Remove the six screws at the front of the unit.

2. Use the M3 x 8 Phillips head hex screws supplied with the rack mount kit to screw the rack mounting brackets into the front of the unit.
3. Position the device in the front of the rack and align the holes in the mounting brackets with the holes in the rack.

4. Screw the mounting brackets to the rack.

**Note:** Cage nuts are provided for racks that are not pre-threaded.
Rack Mounting - Rear

To mount the unit at the rear of the rack, do the following:

1. Remove the six screws at the rear of the unit.

2. Use the M3 x 8 Phillips head hex screws supplied with the rack mounting kit to screw the rack mounting brackets into the rear of the unit.

3. Position the device in the rack and align the holes in the mounting brackets with the holes in the rack.
4. Screw the mounting brackets to the rear of the rack.

**Note:** Cage nuts are provided for racks that are not pre-threaded.
Single Stage Installation

In a single stage installation, no additional switches are cascaded from the original switch. To set up a single stage installation, refer to the installation diagrams starting on page 27 (the numbers in the diagram correspond with the numbers of the instruction steps), and do the following:

1. Plug your Local Console’s keyboard, monitor, and mouse into the unit’s Console Ports. Each port is color coded and marked with an appropriate icon.

   **Note:**
   1. USB keyboards and mice can plug into the USB ports on the front panel, as well as into the ports in the console port section.
   2. The KVM over IP switch does not support distances that exceed 20m between itself and the local monitor.

2. Use Cat 5e cable to connect any available KVM port to a KVM Adapter Cable that is appropriate for the server you are installing (see the table on page 9 for details).

   **Note:**
   1. If you are using a KA7120 or KA7130 Adapter Cable, refer to page 271 for mouse pointer synchronization information.
   2. If you are using a KA7140 Adapter Cable, refer to page 265 for setup and operation information.
   3. The distance between the switch and the KVM Adapter Cable must not exceed these lengths: KA7140: 300m; KA71xx: 50m.

3. Plug the connectors on the KVM Adapter Cable into the appropriate ports of the server you are installing. (See *Adapter Cable Connection Diagram*, page 30.)

4. Plug a cable from the LAN or WAN into the KVM over IP switch’s primary network interface socket.

5. (Optional) Plug another cable from the LAN or WAN into the KVM over IP switch’s backup (secondary) network interface socket.

6. (Optional) Use Cat 5e cable to connect the KVM over IP switch’s PON port to an SA0142 Adapter. Connect the Adapter to the PON IN port of a Power Over the Net™ unit.
1. For Power Over the Net™ units and Power Distribution Units, go to Device Management/OOBC/Console Port Settings of the GUI and select a Baud Rate of 38400 bps.

2. Make sure the CC Management function is disabled for both the KN and PN.

3. The PON unit shown in the example is the PN0108. See Supported Power Over the Net™ Units and Supported Power Distribution Units, page 282, for a list of suitable units.

7. (Optional) Use Cat 5e cable to connect the KVM over IP switch’s Modem port to an SA0142 Adapter. Connect the Adapter’s serial connector to the modem’s DB-9 port.

8. Ground the switch using proper grounding wire to connect the switch’s grounding terminal to a suitable grounded object.

   *Note:* Do not omit this step. Proper grounding helps to prevent damage to the unit from surges or static electricity.

9. Plug the power cords supplied with your package into the switch’s power socket, and then into an AC power source.

   When using a single power socket, be sure to turn on the correct power switch (see Power Switch, page 15). When using both power sockets, either of the power switches can be used to turn on the KVM switch. To enable dual power, turn on both power switches.

   *Note:* If you are connecting the power to a UPS or an ALTUSEN PN9108/PN0108, be sure to use the utility power cords supplied with your package instead of standard power cords.

10. After the KVM over IP switch is cabled up you can turn on the power. After it is powered up, you can turn on the servers.
Note: The diagram above shows an installation with the KN8132V. Installing other KN8 Series switches is same as the KN8132V and only differs in that it provides additional KVM ports.
Adapter Cable Connection Diagram
Adapter Cable Connection Diagram cont.
Two Stage Installation

To control even more servers, up to 32 additional KVM switches can be cascaded from the KVM ports of the original KVM over IP switch. As many as 512 servers can be controlled in a complete two stage installation.

In a cascaded installation, the KVM over IP switch is considered the First Stage unit, the cascaded switches are considered Second Stage units.

Note: The cascaded KVM switch shown in the example is the KH1516. See Supported KVM Switches, page 282, for a list of other switches.

To set up a two stage installation, refer to the diagram on page 33, and do the following:

1. Make sure that power to all the devices you will be connecting, including all preexisting devices on the installation, are properly grounded and have been turned off.

2. Use Cat 5e cable to connect any available KVM Port on the First Stage unit (the KVM over IP switch) to a KVM Adapter Cable (as described under KVM Adapter Cables, page 9).

3. Plug the adapter cable’s KVM connectors to the Keyboard, Video, and Mouse Console ports of the Second Stage unit.

Note: The distance between the First Stage unit and the Second Stage unit must not exceed 40m or 50m based on the KVM adapter cable used.

4. Use KVM cable sets (as described in the Cables section of the cascaded KVM switch’s User Manual), to connect any available KVM port on the Second Stage unit to the Keyboard, Video, and Mouse ports of the servers you are installing.

5. Plug the power cord that came with the cascaded KVM switch into its Power Socket, and then into an AC power source.

6. Repeat these steps for any additional Second Stage units you wish to connect.

7. Power on the Second Stage unit(s), then power on the First Stage unit.

8. Turn on the power to all the servers.

Note: The Power On sequence requires that all Second Stage switches be powered on first. After all Second Stage switches are powered on,
the First Stage switch can be powered on. After all the switches are powered on, the servers can be powered on.

Two Stage Installation Diagram

Note: The diagram above shows an installation with the KN8132V. Cascading other KN8 Series switches is same as the KN8132V and only differs in that it provides additional KVM ports.
PDU Installation

ATEN PDU products are intelligent Power Distribution Units that offer outlet level control combined with remote access to give IT administrators the ability to power control devices attached to the unit from practically any location via a TCP/IP connection.

**Note:** The PDU GUI shown in the example is the PE9216r. See *Supported Power Distribution Units*, page 282, for a list of other PDUs.

To set up a PDU in conjunction with KVM over IP switches, refer to the images below and do the following:

1. Connect both the KVM over IP Switch and the PDU to your Ethernet switch.

2. In the PDU’s GUI, browse to Device Management, then to OOBC. In Console Port Settings, set the Baud Rate to 38400 bps.

3. Still in Device Management, browse to ANMS. In CC Management, uncheck Enable.
4. Next, connect the PDU (Console PON IN) directly to the KVM over IP switch (PON).

5. Following this, using the KVM over IP switch GUI, browse to Device Management, then to ANMS. In Authentication, uncheck CC Management.

6. Finally, confirm that appropriate power management permission has been assigned. Browse to Port Access, then to Port Configuration. Select the relevant port number from the left tree menu.

Select Add (a power device).
The power outlet permission will then be assigned to the port you selected.

Hot Plugging

KVM over IP switches support hot plugging – components can be removed and added back into the installation by unplugging and replugging cables from the ports without the need to shut the unit down.

**Note:** If the server’s Operating System does not support hot plugging, this function may not work properly.

The Adapter ID Function

Adapter Cable information (the Adapter ID, port name, OS, keyboard language, and access mode), is stored on the adapter. The switch’s Adapter ID function takes this information and stores it along with the adapter cable’s configuration information (access rights, etc.), in its database – so that when you move a server together with its adapter cable from one port to another, you don’t have to reconfigure its settings – the Adapter ID function restores them at the new location. The only change is in the port number.

When moving the server and adapter cable to another switch, however, only the information that is stored on the adapter is retained. For the other settings you must either reconfigure them, or use the Backup/Restore function (see page 205) to restore them.

Since port settings are stored with the adapter, if you move a server to a new port without its original adapter, or if you connect a different server to the adapter, you must manually reconfigure the port settings for the new server. See Sidebar Utilities, page 100 for port configuration details.
Powering Off and Restarting

If it becomes necessary to power off the switch, or if the switch loses power and needs to be restarted, wait 30 seconds before powering it back on. The servers should not be affected by this, but if any of them should fail, simply restart them.
Port ID Numbering

Each server on the installation is assigned a unique Port ID. Its Port ID is a one or two segment number that is determined as follows:

- A server attached to a First Stage unit has a one segment Port ID (from 1–64) that corresponds to the KVM Port number that it is connected to.
- A server attached to a Second Stage unit has a two segment Port ID:
  - The second segment (from 1–16), represents the KVM Port number on the Second Stage unit that the server is connected to.
  - The first segment (from 1–64) represents the KVM Port number on the First Stage unit that the Second Stage unit links back to.

For example, a Port ID of 20 - 3 refers to a server that is connected to KVM Port 3 of a Second Stage unit that links back to KVM Port 20 of the First Stage unit:

Port Selection

Port selection is accomplished by means of the GUI. Port selection details are discussed in Chapter 6, Port Access.
Chapter 3
Super Administrator Setup

Overview

This chapter discusses the administrative procedures that the Super Administrator performs to get the KVM over IP switch set up for the first time.

First Time Setup

Once the KVM over IP switch has been cabled up, the Super Administrator needs to set the unit up for user operation. This involves setting the network parameters, and changing the default Super Administrator login. The most convenient way to do this for the first time is from the local console.

Note: For remote methods of setting up the network, see IP Address Determination, page 256.

After the local console has been connected (see Single Stage Installation, page 27), and the KVM over IP switch turned on, a login prompt appears on the console monitor:

Since this is the first time you are logging in, use the default Username: administrator, and the default Password: password.

Note: For security purposes, you should change these to a unique Username and Password. (See Changing the Super Administrator Login, page 42 for details.)
After you successfully log in, the Local Console Main Page appears:
Network Setup
To set up the network, do the following:

1. Click the Device Management tab.
2. Select the Network tab.
3. Fill in the fields according to the information provided under Network, page 159.
Changing the Super Administrator Login

To change the default Super Administrator Username and Password, do the following:

1. At the top of the screen, click the User Management tab.
   The User Management page has a list of Users and Groups in the Sidebar at the left, and a more detailed list of users – with more information about them – in the large central panel. Since this is the first time the page is being accessed, only the Super Administrator appears:

2. Click administrator in the left panel
   – or –
   Select administrator in the central panel, then click Modify (at the bottom of the page.)
The User Information page appears:

3. Change the Username and Password to something unique.
4. Enter the password again in the Confirm Password field to confirm it is correct.
5. Click Save.
6. When the dialog box informing you that the change completed successfully appears, Click OK.
7. Click on another item on the Local Console Main Page, to close this page.
Moving On

After setting up the network and changing the default Super Administrator password, you can proceed to other administration activities. These include User Management, Device Management, and Firmware Upgrade Maintenance.

These activities can be accomplished using any of the KVM over IP switch’s GUI utilities. These include the Local Console; the browser-based Windows ActiveX Viewer; the browser-based Java Client Viewer; the stand-alone Windows Client AP; and the stand-alone Java Client AP. Choose the approach that suits you best.

**Note:** Firmware Upgrade Maintenance cannot be performed from the local console. You must log in remotely with one of the KVM over IP switch’s other GUI utilities for this operation.
Overview

KVM over IP switches can be accessed from a local console; an Internet browser; a Windows application (AP) program; and a Java application (AP) program.

No matter which access method you choose, the KVM over IP switch’s authentication procedure requires you to submit a valid username and password. If you supply invalid login information, the authentication routine will return an *Invalid Username or Password*, or *Login Failed* message. If you see this type of message, log in again with a correct username and password.

**Note:** If the number of invalid login attempts exceeds a specified amount, a time out period is invoked. You must wait until the time out period expires before you can attempt to log in again. See *Login Failures*, page 175 for further details.

Local Console Login

When the local console is attached (see *Single Stage Installation*, page 27) and there is no user logged in, the KVM over IP switch’s login screen appears on the monitor:

![Login Screen](image)

Simply key in your valid Username and Password, then click **Login** to bring up the Local Console Main Page. The Local Console Main Page is similar to the Web Browser, WinClient and Java Client Main Pages. For a description of the Web Browser Main Page, see page 55.
Browser Login

KVM over IP switches can be accessed via an Internet browser running on any platform. To access the switch, do the following:

1. Open the browser and specify the IP address of the switch you want to access in the browser's location bar.

   **Note:** For security purposes, a login string may have been set by the administrator (see page 179 for details). If so, you must include a forward slash and the login string along with the IP address when you log in. For example:
   
   192.168.0.100/kn8164v
   
   If you don't know the IP address and login string, ask your Administrator.

2. When a Security Alert dialog box appears, accept the certificate – it can be trusted. (See Trusted Certificates, page 274, for details.) If a second certificate appears, accept it as well.

   Once you accept the certificate(s), the login page appears:

   ![Login Page](image)

3. Provide your username and password (set by the administrator), then click Login to bring up the Web Main Page. For a discussion of the Web Main Page, see page 55.
Windows Client AP Login

In some cases, the Administrator may not want the KVM over IP switch to be available via browser access. The Windows AP Client allows direct remote access to Windows systems users, without having to go through a browser (although you initially download the Windows AP Client program from the browser page – see Chapter 11, Download).

To connect to the KVM over IP switch, go to the location on your hard disk that you downloaded the Windows AP Client program to, and double-click its icon (WinClient.exe) to bring up the Windows Client Connection Screen:
The Windows Client AP Connection Screen

A description of the Connection Screen is given in the following table:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Menu Bar</td>
<td>The Menu Bar contains two items: File and Help.</td>
</tr>
<tr>
<td></td>
<td>• The File Menu allows the operator to Create, Save, and Open user created Work files (see The File Menu, page 50).</td>
</tr>
<tr>
<td></td>
<td>• The Help Menu displays the WinClient AP version.</td>
</tr>
<tr>
<td>Server List</td>
<td>Each time the WinClient.exe file is run, it searches the user's local LAN segment for KVM over IP switches, and lists whichever ones it finds in this box. If you want to connect to one of these units, double-click it. (See Connecting – Windows Client AP, page 49 for details.)</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> 1. The switch will not appear in the list unless its Enable Device List configuration parameter has been enabled. See Operating Mode, page 157 for details.</td>
</tr>
<tr>
<td></td>
<td>2. Only units whose Access Port settings for Program (see Service Ports, page 160) match the number specified for Port in the Server area of this dialog box appear in the Server List window.</td>
</tr>
<tr>
<td>Server</td>
<td>This area is used when you want to connect to a KVM over IP switch at a remote location. You can drop down the IP list box and select an address from the list. If the address you want isn't listed, you can key in the target IP address in the IP field, and its port number in the Port field. (If you don't know the port number, contact your Administrator.)</td>
</tr>
<tr>
<td></td>
<td>• When the IP address and Port number have been specified, click Connect. (See Connecting – Windows Client AP, page 49 for details.)</td>
</tr>
<tr>
<td></td>
<td>• When you have finished with your session and come back to this dialog box, click Disconnect to end the connection.</td>
</tr>
<tr>
<td>Message Panel</td>
<td>Located just to the right of the Server panel, the Message panel lists status messages regarding the connection to the KVM over IP switch.</td>
</tr>
<tr>
<td>Switch to Remote View</td>
<td>Once you have been authenticated (see Connecting – Windows Client AP, page 49 for details), this button becomes active. Click it to switch to the GUI Main Page. The GUI Main Page is described on page 58.</td>
</tr>
</tbody>
</table>
Connecting – Windows Client AP

To connect to a KVM over IP switch do the following:

1. From the Server List box, double-click the device that you wish to connect to.
   – Or –
   Specify its IP address and port number in the Server IP and Port input boxes.

2. Click Connect.
   The Login dialog box appears:

3. Key in a valid Username and Password, and then click OK.

4. Once you have been authenticated, the Switch to Remote View button becomes active. Click it to connect to the switch and bring up its GUI Main Page. For a description of the GUI Main Page, see page 48.
The File Menu
The File Menu allows the operator to Create, Save, and Open user created Work files. A Work File consists of all the information specified in a Client session. This includes the Server List and Server IP list items, as well as the Hotkey settings.

Whenever a user runs the Client program, it opens with the values contained in the current work file. The current work file consists of the values that were in effect the last time the program was closed.

The File menu consists of the following items:

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>New</td>
<td>Allows the user to create a named work file so its values will not be lost, and it will be available for future recall.</td>
</tr>
<tr>
<td>Open</td>
<td>Allows the user to open a previously saved work file and use the values contained in it.</td>
</tr>
<tr>
<td>Save</td>
<td>Allows the user to save the values presently in effect as the current work file.</td>
</tr>
<tr>
<td>Exit</td>
<td>Exits the WinClient.</td>
</tr>
</tbody>
</table>
Java Client AP Login

In those cases in which the Administrator does not want the KVM over IP switch to be available via browser access, but the local client users aren’t running Windows, the Java AP Client provides direct remote access to non-Windows systems users (although you initially download the Java AP Client program from the browser page – see Chapter 11, Download).

To connect to the KVM over IP switch, go to the location on your hard disk that you downloaded the Java AP Client program to, and double-click its icon (JavaClient.jar) to bring up the Java Client Connection Screen:
### The Java Client AP Connection Screen

A description of the Connection Screen is given in the following table:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
</table>
| Server List     | Each time the JavaClient.jar file is run, it searches the User's local LAN segment for KVM over IP switches, and lists whichever ones it finds in this box. If you want to connect to one of these units, **double-click** it. (See Connecting – Windows Client AP, page 49 for details.)  
**Note:** 1. The switch will not appear in the list unless its `Enable Device List` configuration parameter has been enabled. See Operating Mode, page 157 for details.  
2. Only units whose Access Port settings for `Program` (see Service Ports, page 160) match the number specified for `Port` in the Server area of this dialog box appear in the Server List window. |
| Server          | This area is used when you want to connect to a KVM over IP switch at a remote location. You can drop down the IP list box and select an address from the list. If the address you want isn't listed, you can key in the target IP address in the IP field, and its port number in the Port field. (If you don't know the port number, contact your Administrator.)  
- When the IP address and Port number have been specified, click **Connect**. (See Connecting – Windows Client AP, page 49 for details.)  
- When you have finished with your session and come back to this dialog box, click **Disconnect** to end the connection. |
| Message Panel   | Located just to the right of the Server panel, the Message panel lists status messages regarding the connection to the KVM over IP switch. |
| Switch to Remote View | Once you have been authenticated (see Connecting – Windows Client AP, page 49 for details), this button becomes active. Click it to switch to the GUI Main Page. The GUI Main Page is described on page 58. |
Connecting – Java Client AP

To connect to a KVM over IP switch do the following::

1. From the Server List box, **double-click** the device that you wish to connect to.
   – Or –
   Specify its IP address and port number in the **Server IP** and **Port** input boxes.

2. Click **Login**
   The **Login** dialog box appears:

   ![Login Dialog Box]

3. Key in a valid Username and Password, and then click **OK**.

4. Once you have been authenticated, the **Remote View** button becomes active. Click it to connect to the switch and bring up its GUI Main Page.
   For a description of the GUI Main Page, see page 48.

   ![JavaClient GUI]

   ![Remote View Button]
Chapter 5
The User Interface

Overview

Once you have successfully logged in, the KVM over IP switch’s user interface Main Page appears. The look of the page varies slightly, depending on which method you used to log in. Each of the interfaces is described in the sections that follow.

The Web Browser Main Page

To ensure multi-platform interoperability, access to the KVM over IP switches can be accomplished with most standard web browsers. Once users log in and are authenticated (see page 46), the Web Browser Main Page comes up, with the Port Access page displayed:

Note: The screen depicts a Super Administrator’s page. Depending on a user’s type and permissions, not all of these elements appear.
Page Components

The web page screen components are described in the table, below:

<table>
<thead>
<tr>
<th>No.</th>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Tab Bar</td>
<td>The tab bar contains the KVM over IP switch’s main operation categories. The items that appear in the tab bar are determined by the user’s type, and the authorization options that were selected when the user’s account was created.</td>
</tr>
<tr>
<td>2</td>
<td>Menu Bar</td>
<td>The menu bar contains operational sub-categories that pertain to the item selected in the tab bar. The items that appear in the menu bar are determined by the user’s type, and the authorization options that were selected when the user’s account was created.</td>
</tr>
<tr>
<td>3</td>
<td>Sidebar</td>
<td>The Sidebar provides a tree view listing of ports that relate to the various tab bar and menu bar selections. Clicking a node in the Sidebar brings up a page with the details that are relevant to it. There is a Filter button at the bottom of the Sidebar that lets you expand or narrow the scope of the ports that appear in the tree. The Filter function is discussed in detail on page 99.</td>
</tr>
<tr>
<td>4</td>
<td>About</td>
<td>About provides information regarding the switch’s current firmware version.</td>
</tr>
<tr>
<td>5</td>
<td>Logout</td>
<td>Click this button to log out of your KVM over IP switch session.</td>
</tr>
<tr>
<td>6</td>
<td>Welcome Message</td>
<td>If this function is enabled (see Welcome Message*, page 120), a welcome message displays here.</td>
</tr>
<tr>
<td>7</td>
<td>Interactive Display Panel</td>
<td>This is your main work area. The screens that appear reflect your menu choices and Sidebar node selection.</td>
</tr>
</tbody>
</table>

Manufacturing Number

The “MFG Number” (Manufacturing Number) is an internal serial number used by ATEN’s factory and technical support staff to identify products. This number does not affect products’ warranty. If your product requires after-sales services, you may provide the MFG Number to ATEN’s sales or technical support staff to identify the product and model number.
The Tab Bar

The number and type of icons that appear on the Tab Bar at the top of the page are determined by the user’s type (Super Administrator, Administrator, User) and the permissions assigned when the user’s account was created. The functions associated with each of the icons are explained in the table below:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Port Access Icon" /></td>
<td><strong>Port Access</strong>: The Port Access page is used to access and control the devices on the KVM over IP switch installation. This page is available to all users.</td>
</tr>
<tr>
<td><img src="image" alt="User Management Icon" /></td>
<td><strong>User Management</strong>: The User Management page is used to create and manage Users and Groups. It can also be used to assign devices to them. User Management is discussed on page 137. This tab is available to the Super Administrator, as well as administrators and users who have been given User Management permission. The tab doesn’t appear for other administrators and users.</td>
</tr>
<tr>
<td><img src="image" alt="Device Management Icon" /></td>
<td><strong>Device Management</strong>: The Device Management page is used to configure and control the overall operation of the KVM over IP switch. This page is available to the Super Administrator, as well as administrators and users who have been given Device Management permission. The tab doesn’t appear for other administrators and users.</td>
</tr>
<tr>
<td><img src="image" alt="Log Icon" /></td>
<td><strong>Log</strong>: The Log page displays the contents of the log file. The Log page is discussed on page 193.</td>
</tr>
<tr>
<td><img src="image" alt="Maintenance Icon" /></td>
<td><strong>Maintenance</strong>: The Maintenance page is used to install new firmware; backup and restore configuration and account information; ping network devices; and restore default values. The Maintenance page is discussed on page 197. This page is available to the Super Administrator (and Administrators and Users with Maintenance permission). The icon doesn’t display on the page of ordinary administrators and users.</td>
</tr>
<tr>
<td><img src="image" alt="Download Icon" /></td>
<td><strong>Download</strong>: Users can click this icon to download AP versions of the Windows Client; the Java Client; and the Log Server. This page is available to all users. The programs that can be downloaded depend on the user’s permissions.</td>
</tr>
</tbody>
</table>

There are two small icons at the extreme right of the page. Their functions are described in the table, below:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Information Icon" /></td>
<td>Click this icon to brings up a panel with information about the KVM over IP switch firmware version.</td>
</tr>
<tr>
<td><img src="image" alt="Logout Icon" /></td>
<td>Click this icon to log out and end your KVM over IP switch session.</td>
</tr>
</tbody>
</table>
The AP GUI Main Page

With WinClient AP, and Java Client AP access, once users log in (see Logging In, page 45), the GUI Main Page comes up:

The GUI Main Page is similar to that of the Web Browser. The differences between them are as follows:

1. The AP GUI version doesn’t have a menu bar below the tab bar; it has a series of tabs like a notebook, instead. Like the Web Browser interface, however, the makeup of the tabbed notebook changes depending on the items selected on the main Tab Bar and in the Sidebar.

2. In addition to Filter, there are also buttons for Scan and Array Mode at the bottom of the Sidebar. These functions are discussed in Chapter 6, Port Access.

3. There is a hidden Control Panel at the upper or lower center of the screen that becomes visible when you mouse over it. (The default is at the upper center of the screen.)
4. There is an additional icon at the extreme right of the page: 
   [X]. Click this icon to close the GUI Main Page and go to the display of the last selected port.

5. The GUI can be navigated via the keyboard as shown in the table, below:

<table>
<thead>
<tr>
<th>Keys</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ctrl + P</td>
<td>Opens the Port Access page.</td>
</tr>
<tr>
<td>Ctrl + U</td>
<td>Opens the User Management page.</td>
</tr>
<tr>
<td>Ctrl + D</td>
<td>Opens the Device Management page.</td>
</tr>
<tr>
<td>Ctrl + L</td>
<td>Opens the Log page.</td>
</tr>
<tr>
<td>Ctrl + M</td>
<td>Opens the Maintenance page.</td>
</tr>
<tr>
<td>Ctrl + A</td>
<td>Opens the Download page.</td>
</tr>
<tr>
<td>F1</td>
<td>To see About information</td>
</tr>
<tr>
<td>F2</td>
<td>To edit the port name of the selected port.</td>
</tr>
<tr>
<td>F4</td>
<td>Selects the Sidebar (left) panel.</td>
</tr>
<tr>
<td>F5</td>
<td>Selects the main (right) panel</td>
</tr>
<tr>
<td>F7</td>
<td>Closes the GUI.</td>
</tr>
<tr>
<td>F8</td>
<td>To log out.</td>
</tr>
</tbody>
</table>
The Local Console GUI Main Page

The Local Console GUI Main Page is similar to the Java and Windows AP GUI Main Page:

The major difference is that the Local Console Main Page doesn’t have a tab for Download.

In addition, there are two small icons at the bottom right – as described in the following table.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Speaker Icon" /></td>
<td>Speaker. Allows sound output from the servers connected to the switch’s ports to be heard on the speakers connected to the Local Console. Click the icon to toggle speaker support On and Off. When Off, a red X displays across the icon.</td>
</tr>
<tr>
<td><img src="image" alt="Microphone Icon" /></td>
<td>Microphone. Allows microphone input from the Local Console to be sent to the servers connected to the switch’s ports. Click the icon to toggle microphone support On and Off. When Off, a red X displays across the icon.</td>
</tr>
</tbody>
</table>
The Control Panel

WinClient Control Panel

Since the WinClient Control Panel (for the ActiveX Web Viewer and WinClient AP) contains the most complete functionality, this section describes the WinClient Control Panel. Although the Java Control Panel (for the Web Viewer and Java Client AP) does not enable all of the features that this one does, the functions that they do share are the same, and you can refer to the information described here when using it.

The Control Panel is hidden at the upper or lower center of the screen (the default is at the upper center), and becomes visible when you mouse over it. The panel consists of three rows: an icon row at the top, and two text rows below it:

- By default, the upper text row shows the video resolution of the remote display. As the mouse pointer moves over the icons in the icon bar, however, the information in the upper text row changes to describe the icon's function. In addition, if a message from another user is entered in the message board, and you have not opened the message board in your session, the message will appear in the upper row.

- The lower row shows the IP address of the device you are accessing at the left of the row. The center of the row indicates which bus the user is on (the number before the slash), and the total number of users on that bus (the number behind the slash).

**Note:** The above image shows the complete Control Panel. The icons that appear can be user selected. See *Control Panel Configuration*, page 92, for details.

1. The bus and user information in the center of the row only displays if it has been enabled. See *Bus Info*, page 93 for details.

2. See *Multiuser Operation*, page 220 for further information regarding the KVM over IP switch’s bus assignments.
• Right clicking in the text row area brings up a menu-style version of the toolbar. In addition, it allows you to select options for the Zoom, Mouse Pointer, and Mouse Sync Mode. These functions are discussed in the sections that follow.

• To move the Control Panel to a different location on the screen, place the mouse pointer over the text row area, then click and drag.
WinClient Control Panel Functions

The Control Panel functions are described in the table below.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="1" alt="Icon" /></td>
<td>This is a toggle. Click to make the Control Panel persistent – i.e., it always displays on top of other screen elements. Click again to have it display normally.</td>
</tr>
<tr>
<td><img src="2" alt="Icon" /></td>
<td>Click to bring up the Macros dialog box (see page 66 for details).</td>
</tr>
<tr>
<td><img src="3" alt="Icon" /></td>
<td>Click to bring up the Video Options dialog box. Right-click to perform a quick Auto Sync (see Video Settings, page 75, for details).</td>
</tr>
<tr>
<td><img src="4" alt="Icon" /></td>
<td>Click to perform a video and mouse autosync operation. It is the same as clicking the Auto-sync button in the Video Options dialog box (see Video Settings, page 75).</td>
</tr>
<tr>
<td><img src="5" alt="Icon" /></td>
<td>Toggles the display between Full Screen Mode and Windowed Mode.</td>
</tr>
<tr>
<td><img src="6" alt="Icon" /></td>
<td>Click to take a snapshot (screen capture) of the remote display. See Snapshot, page 93, for details on configuring the Snapshot parameters.</td>
</tr>
<tr>
<td><img src="7" alt="Icon" /></td>
<td>Click to bring up the Message Board (see The Message Board, page 80).</td>
</tr>
<tr>
<td><img src="8" alt="Icon" /></td>
<td>Click to send a Ctrl+Alt+Del signal to the remote system.</td>
</tr>
<tr>
<td><img src="9" alt="Icon" /></td>
<td>Click to toggle the remote display between color and gray scale views.</td>
</tr>
<tr>
<td><img src="10" alt="Icon" /></td>
<td>Click to bring up the Virtual Media dialog box. The icon changes depending on the status of the virtual media function. See Virtual Media, page 82, for specific details. Note: This icon displays in gray when the function is disabled or not available.</td>
</tr>
<tr>
<td><img src="11" alt="Icon" /></td>
<td>Click to zoom the remote display window. <strong>Note:</strong> This feature is only available in windowed mode (Full Screen Mode is off). See Zoom, page 85 for details.</td>
</tr>
<tr>
<td><img src="12" alt="Icon" /></td>
<td>Click to bring up the on-screen keyboard (see The On-Screen Keyboard, page 86).</td>
</tr>
<tr>
<td><img src="13" alt="Icon" /></td>
<td>Click to select the mouse pointer type. <strong>Note:</strong> This icon changes depending on which mouse pointer type is selected (see Mouse Pointer Type, page 88).</td>
</tr>
</tbody>
</table>
Click to toggle Automatic or Manual mouse sync.

- When the selection is **Automatic**, a green ✓ appears on the icon.
- When the selection is **Manual**, a red X appears on the icon.

See *Mouse DynaSync Mode*, page 90 for a complete explanation of this feature.

Click to toggle sound from the remote server to be heard on the client computer’s speakers on or off. The “prohibited” symbol (a red circle with a diagonal bar) displays on the icon when the speaker is toggled Off.

Click to display a dropdown list of *User* macros in order to access and run macros more conveniently than using the Macros dialog box (see the *Macros* icon in the table above, and the *Macros* section on page 66).

The Power Over the Net™ icon allows the device to be powered on, powered off or rebooted, when the device is connected to a compatible PON “PN” series unit. (For more information on configuring PON features see *PON Devices*, page 186).

See *Power Over the Net™*, page 89 for a complete explanation of this feature.

Under an accessed port, click to skip to the first port accessible to the user on the entire installation without having to recall the Port Access page.

Under an accessed port, click to skip to the first port accessible to the user that is previous to the current one without having to recall the Port Access page.

Under an accessed port, click to skip to the first port accessible to the user that is after the current one without having to recall the Port Access page.

Under an accessed port, click to skip to the last port accessible to the user on the entire installation without having to recall the Port Access page.

Under an accessed port, click to begin Auto Scan Mode. The KVM over IP switch automatically switches among the ports that were selected for Auto Scanning with the *Filter* function (see *Filter*, page 99). This allows you to monitor their activity without having to switch among them manually.

Under an accessed port, click to invoke Panel Array Mode (see *Panel Array Mode*, page 218).

Under an accessed port, click to recall the GUI.

Click to bring up the Control Panel Configuration dialog box. See *Control Panel Configuration*, page 92, for details on configuring the Control Panel.
Chapter 5. The User Interface

Click to exit the viewer.
- Exiting from a Browser Viewer session brings you back to the web browser Main Page.
- Exiting from a WinClient AP session brings you back to the login dialog box (see page 47).
- Exiting from a Java Client AP session brings you back to the login dialog box (see page 51).

These icons show the Num Lock, Caps Lock, and Scroll Lock status of the remote computer.
- When the lock state is On, the LED is bright green and the lock hasp is closed.
- When the lock state is Off, the LED is dull green and the lock hasp is open.

Click on the icon to toggle the status.

**Note:** These icons and your local keyboard icons are in sync. Clicking an icon causes the corresponding LED on your keyboard to change accordingly. Likewise, pressing a Lock key on your keyboard causes the icon’s color to change accordingly.
Macros

The Macros icon provides access to three functions found in the Macros dialog box: Hotkeys, User Macros, and System Macros. Each of these functions is described in the following sections.

Hotkeys

Various actions related to manipulating the remote server can be accomplished with hotkeys. The Hotkey Setup utility (accessed by clicking this icon), lets you configure which hotkeys perform the actions.

The hotkeys that invoke an action are shown to the right of its name. Use the checkbox to the left of an action’s name to enable or disable its hotkey.

To change the hotkey for an action, do the following:

1. Highlight the Action, then click Set Hotkey.

2. Press your selected Function keys (one at a time). The key names appear in the Hotkeys field as you press them.
   - You can use the same function keys for more than one action, as long as the key sequence is not the same.
   - To cancel setting a hotkey value, click Cancel; to clear an action’s Hotkeys field, click Clear.

3. When you have finished keying in your sequence, click Save.

To reset all the hotkeys to their default values, click Reset.
An explanation of the Hotkey actions is given in the table below:

<table>
<thead>
<tr>
<th>Action</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exit remote location</td>
<td>Breaks the connection to the KVM over IP switch and returns you to local client computer operation. This is equivalent to clicking the Exit icon on the Control Panel. The default keys are F2, F3, F4.</td>
</tr>
<tr>
<td>Adjust Video</td>
<td>Brings up the Video Settings dialog box. This is equivalent to clicking the Video Settings icon on the Control Panel. The default keys are F5, F6, F7.</td>
</tr>
<tr>
<td>Toggle Control Panel</td>
<td>Toggles the Control Panel Off and On. The default keys are F3, F4, F5.</td>
</tr>
<tr>
<td>Toggle mouse display</td>
<td>If you find the display of the two mouse pointers (local and remote) to be confusing or annoying, you can use this function to shrink the non-functioning pointer down to a barely noticeable tiny circle, which can be ignored. Since this function is a toggle, use the hotkeys again to bring the mouse display back to its original configuration. This is equivalent to selecting the Dot pointer type from the Mouse Pointer icon on the Control Panel. The default keys are F7, F8, F9.</td>
</tr>
<tr>
<td>Note:</td>
<td>The Java Control Panel does not have this feature.</td>
</tr>
<tr>
<td>Adjust mouse</td>
<td>This synchronizes the local and remote mouse movements. The default keys are F8, F7, F6.</td>
</tr>
<tr>
<td>Video Auto-sync</td>
<td>This combination performs an auto-sync operation. It is equivalent to clicking the Video Autosync icon on the Control Panel. The default keys are F6, F7, F8.</td>
</tr>
<tr>
<td>Show/Hide Local Cursor</td>
<td>Toggles off and on: hides local cursor and locks the mouse pointer and keyboard use within the Windows/Java Client AP window, plus hides the control panel. This is equivalent to selecting the Single pointer type from the Mouse Pointer icon on the Control Panel. The default keys are F4, F5.</td>
</tr>
<tr>
<td>Substitute Ctrl key</td>
<td>If your local client computer captures Ctrl key combinations, preventing them from being sent to the remote server, you can implement their effects on the remote server by specifying a function key to substitute for the Ctrl key. If you substitute the F11 key, for example, pressing [F11 + 5] would appear to the remote server as [Ctrl + 5]. The default key is F11.</td>
</tr>
<tr>
<td>Substitute Alt key</td>
<td>Although all other keyboard input is captured and sent to the KVM over IP switch, [Alt + Tab] and [Ctrl + Alt + Del] work on your local client computer. In order to implement their effects on the remote server, another key may be substituted for the Alt key. If you substitute the F12 key, for example, you would use [F12 + Tab] and [Ctrl + F12 + Del]. The default key is F12.</td>
</tr>
</tbody>
</table>
User Macros
User Macros are created to perform specific actions on the remote server. To create the macro, do the following:

1. Select User Macros, then click Add.

2. In the dialog box that comes up, replace the “New Macro” text with a name of your choice for the macro:
3. Click **Record**.
   The dialog box disappears, and a small panel appears at the top left of the screen:

4. Press the keys for the macro.
   - To pause macro recording, click **Pause**. To resume, click **Pause** again.
   - Clicking **Show** brings up a dialog box that lists each keystroke that you make, together with the amount of time each one takes:

   ![Macro dialog box](image)

   - Clicking **Cancel** cancels all keystrokes.
   - When you have finished, click **Stop**. (This is the equivalent of clicking **Done** in Step 5.)

**Note:** 1. Case is not considered – typing A or a has the same effect.

5. When recording the macro the focus must be on the remote screen. It cannot be in the macro dialog box.

   2. Only the default keyboard characters may be used. Alternate characters cannot be used. For example, if the keyboard is Traditional Chinese and default character is A the alternate Chinese character obtained via keyboard switching is not recorded.
6. If you haven’t brought up the Show dialog, click **Done** when you have finished recording your macro. You return to the Macros dialog box with your system macro key presses displayed in the Macro column:

7. If you want to change any of the keystrokes, select the macro and click **Edit**. This brings up a dialog box similar to the one for Show. You can change the content of your keystrokes, change their order, etc.

8. Repeat the procedure for any other macros you wish to create.
After creating your macros, you can run them in any of three ways:

1. By using the hotkey (if one was assigned).
2. By opening the Macro List on the Control Panel and clicking the one you want (see page 64).
3. By opening this (Macros) dialog box and clicking **Play**.

If you run the macro from this dialog box, you have the option of specifying how the macro runs.

- If you choose **Play Without Wait**, the macro runs the key presses one after another with no time delay between them.
- If you choose **Play With Time Control**, the macro waits for the amount of time between key presses that you took when you created it. Click on the arrow next to **Play** to make your choice.
- If you click **Play** without opening the list, the macro runs with the default choice (**NoWait** or **TimeCtrl**), which is shown in the **Playback** column.

![Macros dialog box](image)

You can change the default choice by clicking on the current choice (**NoWait** in the screenshot above), and selecting the alternate choice.

**Note:**
1. Information about the Search function is given on page 72.
2. User Macros are stored on the Local Client computer of each user. Therefore, there is no limitation on the number of macros, the size of the macro names, or makeup of the hotkey combinations that invoke them.
Search
Search, at the bottom of the dialog box, lets you filter the list of macros that appear in the large upper panel for you to play or edit. Click a radio button to choose whether you want to search by name or by key; key in a string for the search; then click **Search**. All instances that match your search string appear in the upper panel.

System Macros
System Macros are used to create exit macros for when you close a session. For example, as an added measure of security, you could create a macro that sends the Winkey-L combination which would cause the remote server’s log in page to come up the next time the device was accessed. To create the macro, do the following:

1. Select **System Macros**, then click **Add**.

2. In the dialog box that comes up, replace the “New Macro” text with a name of your choice for the macro:
3. Click **Record**.
   The dialog box disappears, and a small panel appears at the top left of the screen:

   ![Pause, Done, Cancel, Show Buttons]

4. Press the keys for the macro.
   - To pause macro recording, click **Pause**. To resume, click **Pause** again.
   - Clicking **Show** brings up a dialog box that lists each keystroke that you make, together with the amount of time each one takes (see page 73).

**Note:**
1. Case is not considered – typing A or a has the same effect.
2. When recording the macro the focus must be on the remote screen. It cannot be in the macro dialog box.
3. Only the default keyboard characters may be used. Alternate characters cannot be used. For example, if the keyboard is Traditional Chinese and default character is A the alternate Chinese character obtained via keyboard switching is not recorded.

6. If you haven’t brought up the Show dialog, click **Done** when you have finished recording your macro. You return to the Macros dialog box with your system macro key presses displayed in the Macro column:

   ![Macros Dialog Box]
7. If you want to change any of the keystrokes, select the macro and click **Edit**. This brings up a dialog box similar to the one for **Show**. You can change the content of your keystrokes, change their order, etc.

8. Repeat the procedure for any other macros you wish to create.

Once the system macros have been created, they are available for use on a port-by-port basis. They get selected on a port’s **Port Configuration → Port Properties** page (see **Port Level**, page 129 for details).

**Note:** 1. Information about the Search function is given on page 72.
   
   2. You can choose only one system macro per port.
   
   3. Systems macros are stored on the switch, therefore macro names may not exceed 64 Bytes; hotkey combinations may not exceed 256 Bytes. (Each key usually takes 3–5 Bytes.)
**Video Settings**

Clicking the Hammer icon on the Control Panel brings up the *Basic Video Settings* dialog box with basic settings. The options in the basic dialog box allow you to adjust the Screen Position, set Auto-Sync, and slide the Performance bar setting. Selecting the *Advanced* button opens the *Advanced Video Settings* dialog box, providing more detailed options including; RGB, Gamma, Video Quality, Enable Refresh, Transparency and Color Depth Control, as shown below:

**Basic Video Settings**

![Video Settings Dialog Box](image)
Advanced Video Settings

The meanings of the video adjustment options are given in the table:

<table>
<thead>
<tr>
<th>Options</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screen Position</td>
<td>Adjust the horizontal and vertical position of the remote server window by Clicking the Arrow buttons.</td>
</tr>
</tbody>
</table>
| Auto-Sync     | Click Auto-Sync to have the vertical and horizontal offset values of the remote screen detected and automatically synchronized with the local screen.  
|               | **Note:** 1. If the local and remote mouse pointers are out of sync, in most cases, performing this function will bring them back into sync.  
|               | 2. This function works best with a bright screen.  
|               | 3. If you are not satisfied with the results, use the Screen Position arrows to position the remote display manually. |
## Chapter 5. The User Interface

### Options

<table>
<thead>
<tr>
<th>Options</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>RGB</strong></td>
<td>Drag the slider bars to adjust the RGB (Red, Green, Blue) values. When a RGB value is increased, the RGB component of the image is correspondingly increased. If you enable Set to Grayscale, the remote video display is changed to grayscale. Clicking the Reset button brings the RGB settings back their default values.</td>
</tr>
<tr>
<td><strong>Gamma</strong></td>
<td>This section allows you to adjust the video display's gamma level. This function is discussed in detail in the next section, Gamma Adjustment.</td>
</tr>
<tr>
<td><strong>Performance</strong></td>
<td>Use the slide bar to select the type of Internet connection that the local client computer uses. The switch will use that selection to automatically adjust the Video Quality settings to optimize the quality of the video display. Since network conditions vary, if none of the pre-set choices seem to work well, you can select Advanced and use the Video Quality slider bar to adjust the settings to suit your conditions.</td>
</tr>
<tr>
<td><strong>Enhanced Text Mode</strong></td>
<td>Check this to solve video display problems related to video screen resolution that affect some interface systems (e.g., Sun Blade 1000 and other servers). This setting can improve the image color on some displays. Default YUV: 4:1:1 Enhanced Text Mode YUV: 4:4:4</td>
</tr>
<tr>
<td><strong>Video Quality</strong></td>
<td>Drag the slider bar to adjust the overall Video Quality. The larger the value, the clearer the picture and the more video data goes through the network. Depending on the network bandwidth, a high value may adversely effect response time.</td>
</tr>
<tr>
<td><strong>Enable Refresh</strong></td>
<td>The KVM over IP switch can redraw the screen every 1 to 99 seconds, eliminating unwanted artifacts from the screen. Select Enable Refresh and enter a number from 1 through 99. The KVM over IP switch will redraw the screen at the interval you specify. This feature is disabled by default. Click to put a check mark in the box next to Enable Refresh to enable this feature. <strong>Note</strong>: 1. The switch starts counting the time interval when mouse movement stops. 2. Enabling this feature increases the volume of video data transmitted over the network. The lower the number specified, the more often the video data is transmitted. Setting too low a value may adversely affect overall operating responsiveness.</td>
</tr>
<tr>
<td><strong>Transparency</strong></td>
<td>Adjusts the transparency of the toolbar that comes up when the GUI hotkey ([Scroll Lock][Scroll Lock], for example), is invoked. Slide the bar until the display in the example window is to your liking.</td>
</tr>
</tbody>
</table>

---

77
<table>
<thead>
<tr>
<th>Options</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color Depth Control</td>
<td>This setting determines the richness of the video display by adjusting the amount of color information.</td>
</tr>
<tr>
<td>Preset / Custom</td>
<td>Using the Preset and Custom buttons allow you to set and save custom video settings, and revert back to default video settings.</td>
</tr>
</tbody>
</table>
**Gamma Adjustment**

If it is necessary to correct the gamma level for the remote video display, use the *Gamma* function of the Video Settings dialog box.

- Under *Advanced* configuration, there are ten preset and four user-defined levels to choose from. Drop down the list box and choose the most suitable one.
- For greater control, clicking the *Advanced* button brings up the following dialog box:

![Gamma Adjustment Dialog Box]

- Click and drag the diagonal line at as many points as you wish to achieve the display output you desire.
- Click **Save As** to save up to four user-defined configurations derived from this method. Saved configurations can be recalled from the list box at a future time.
- Click **Reset** to abandon any changes and return the gamma line to its original diagonal position.
- Click **OK** to save your changes and close the dialog box.
- Click **Cancel** to abandon your changes and close the dialog box.

**Note:** For best results, change the gamma while viewing a remote server.
The KVM over IP switch supports multiple user logins, which may cause access conflicts. To alleviate the problem, a message board has been provided, which allows users to communicate with each other:

### Button Bar

The buttons on the Button Bar are toggles. Their actions are described in the table below:

<table>
<thead>
<tr>
<th>Button</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Enable/Disable Chat" /></td>
<td><strong>Enable/Disable Chat.</strong> When disabled, messages posted to the board are not displayed. The button is shadowed when Chat is disabled. The icon displays next to the user’s name in the User List panel when the user has disabled Chat.</td>
</tr>
<tr>
<td><img src="image" alt="Occupy/Release Keyboard/Video/Mouse" /></td>
<td><strong>Occupy/Release Keyboard/Video/Mouse.</strong> When you Occupy the KVM, other users cannot see the video, and cannot input keyboard or mouse data. The button is shadowed when the KVM is occupied. The icon displays next to the user's name in the User List panel when the user has occupied the KVM.</td>
</tr>
<tr>
<td><img src="image" alt="Occupy/Release Keyboard/Mouse" /></td>
<td><strong>Occupy/Release Keyboard/Mouse.</strong> When you Occupy the KM, other users can see the video, but cannot input keyboard or mouse data. The button is shadowed when the KM is occupied. The icon displays next to the user's name in the User List panel when the user has occupied the KM.</td>
</tr>
<tr>
<td><img src="image" alt="Show/Hide User List" /></td>
<td><strong>Show/Hide User List.</strong> When you Hide the User List, the User List panel closes. The button is shadowed when the User List is open.</td>
</tr>
</tbody>
</table>
Chapter 5. The User Interface

Message Display Panel
Messages that users post to the board - as well as system messages - display in this panel. If you disable Chat, however, messages that get posted to the board won't appear.

Compose Panel
Key in the messages that you want to post to the board in this panel. Click Send, or press [Enter] to post the message to the board.

User List Panel
The names of all the logged in users are listed in this panel.
- Your name appears in blue; other users' names appear in black.
- By default, messages are posted to all users. To post a message to one individual user, select the user's name before sending your message.
- If a user's name is selected, and you want to post a message to all users, select All Users before sending your message.
- If a user has disabled Chat, its icon displays before the user's name to indicate so.
- If a user has occupied the KVM or the KM, its icon displays before the user's name to indicate so.
Virtual Media

The Virtual Media feature allows a drive, folder, image file, removable disk, or smart card reader on a user’s system to appear and act as if it were installed on the remote server.

The Virtual Media icon changes depending on the status of the virtual media function, as shown in the table below:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Gray Icon]</td>
<td>The icon displays in gray to indicate that the virtual media function is disabled or not available.</td>
</tr>
<tr>
<td>![Blue Icon]</td>
<td>The icon displays in blue to indicate that the virtual media function is available. Click the icon to bring up the virtual media dialog box.</td>
</tr>
<tr>
<td>![Blue with Red X]</td>
<td>The icon displays in blue with a red X to indicate that a virtual media device has been mounted on the remote server. Click the icon to unmount all redirected devices.</td>
</tr>
</tbody>
</table>

Mounting Virtual Media

To mount a virtual media device, do the following:

1. Click the Virtual Media icon to bring up the Virtual Media dialog box:

   ![Virtual Media Control](image)

   Note: The T button at the top right brings up a slider to adjust the transparency of the dialog box. After making your adjustment, click anywhere in the dialog box to dismiss the slider.
2. Click **Add**; then select the media source.

![Virtual Media Control](image)

Depending on your selection, additional dialog boxes appear to enable you to select the drive, ISO file, folder, or removable disk you desire. See *Virtual Media Support*, page 283 for a list of supported virtual media types, and details about mounting them.

3. If your device only supports full speed USB, put a check in the *Disable High Speed USB Operation Mode* checkbox.

4. To add additional media sources, click **Add**, and select the source as many times as you require. Up to three virtual media choices can be mounted. The top three in the list are the ones that are selected. Virtual Media and Smart Card readers can be mounted at the same time. To rearrange the selection order, highlight the device you want to move, then click the Up or Down Arrow button to promote or demote it in the list.

5. *Read* refers to the redirected device being able to send data to the remote server; *Write* refers to the redirected device being able to have data from the remote server written to it. For the redirected device to be writable as well as readable, click to put a check in the *Enable Write* checkbox:

![Virtual Media Control](image)

**Note:** If a redirected device cannot be written to, it appears in gray.
6. To remove an entry from the list, select it and click **Remove**.

7. After you have made your media source selections, click **Mount**. The dialog box closes. The virtual media devices that you have selected are redirected to the remote server, where they show up as drives, files, folders, etc. on the remote server’s file system.

![Virtual Media Devices](image)

Once mounted, you can treat the virtual media as if they really existed on the remote server – drag and drop files to/from them; open files on the remote server for editing and save them to the redirected media, etc.

Files that you save to the redirected media will actually be saved on your local client computer’s storage. Files that you drag from the redirected media will actually come from your local client computer’s storage.

8. To end the redirection, bring up the **Control Panel** and click on the Virtual Media icon. All mounted devices are automatically unmounted.
Chapter 5. The User Interface

**Zoom**

The Zoom icon controls the zoom factor for the remote view window. Settings are as follows:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>100%</td>
<td>Sizes and displays the remote view window at 100%.</td>
</tr>
<tr>
<td>75%</td>
<td>Sizes and displays the remote view window at 75%.</td>
</tr>
<tr>
<td>50%</td>
<td>Sizes and displays the remote view window at 50%.</td>
</tr>
<tr>
<td>25%</td>
<td>Sizes and displays the remote view window at 25%.</td>
</tr>
<tr>
<td>1:1</td>
<td>Sizes and displays the remote view window at 100%. The difference between this setting and the 100% setting is that when the remote view window is resized its contents don’t resize – they remain at the size they were. To see any objects that are outside of the viewing area move the mouse to the window edge, to have the screen scroll.</td>
</tr>
</tbody>
</table>
The On-Screen Keyboard

The KVM over IP switch supports an on-screen keyboard, available in multiple languages, with all the standard keys for each supported language. Click this icon to pop up the on-screen keyboard:

One of the major advantages of the on-screen keyboard is that if the keyboard languages of the remote and local systems aren’t the same, you don’t have to change the configuration settings for either system. Just bring up the on-screen keyboard; select the language used by the server you are accessing; and use the on-screen keyboard to communicate with it.

Note: You must use your mouse to click on the keys. You cannot use your actual keyboard.

Changing Languages
To change languages, do the following:

1. Click the down arrow next to the currently selected language, to drop down the language list.

2. Select the new language from the list.
Selecting Platforms

The On-screen Keyboard supports the Sun platform as well as the PC. To select the platform, do the following:

1. Click the down arrow next to the currently selected platform, to drop down the platform list.

2. Select the new platform from the list.

Expanded Keyboard

To display/hide the expanded keyboard keys, click the arrow to the right of the language list arrow.
Mouse Pointer Type

KVM over IP switches offer a number of mouse pointer options when working in the remote display. Click this icon to select from the available choices:

Note: 1. Before accessing a port, only Dual and Crosshairs are available for the Windows Viewers. Once the port is accessed, three pointers are available.

2. The Dot pointer is not available with the Java Client Viewer or the Java Client AP.

3. Selecting the Single pointer has the same effect as the Toggle mouse display hotkey function (see "Toggle mouse display", page 67 for details).

4. The icon on the Control Panel changes to match your choice.
Chapter 5. The User Interface

**Power Over the Net™**

The Power Over the Net™ icon provides the ability to power on, power off, and reboot outlets associated with the port on the PON device (see *Power Management*, page 132 for details) from the control panel. Click this icon to select from the available choices:

![Image of interface with Power Over the Net™ options]

After clicking on the PON icon, a list of the power outlets associated with the connected port appears with the available options:

<table>
<thead>
<tr>
<th>Options</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>On=&gt;Off</td>
<td>Sends a Power Off signal to the selected outlet.</td>
</tr>
<tr>
<td>On=&gt;Reboot</td>
<td>Sends a Reboot signal to the selected outlet.</td>
</tr>
<tr>
<td>Off=&gt;On</td>
<td>Sends a Power On signal to the selected outlet.</td>
</tr>
<tr>
<td>All</td>
<td>Sends the selected signal (On, Off, Reboot) to all associated outlets.</td>
</tr>
<tr>
<td>Pending</td>
<td>A signal has been sent to the outlet and is in the process of performing the action.</td>
</tr>
</tbody>
</table>
Mouse DynaSync Mode

Synchronization of the local and remote mouse pointers is accomplished either automatically or manually.

Automatic Mouse Synchronization (DynaSync)

Mouse DynaSync provides automatic locked-in synching of the remote and local mouse pointers – eliminating the need to constantly resync the two movements.

Note: This feature is only available for Windows and Mac systems (G4 and higher) whose adapter attribute OS setting is configured for Win or Mac (see Port Properties, page 129), which are connected to the switch with one of the following Adapter Cables: KA7166, KA7168, KA7169, KA7170, KA7175, KA7176 or KA7177.

All other configurations must use manual mouse synchronization (described in the next section).

The icon on the Control Panel indicates the synchronization mode status as follows:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Gray Icon]</td>
<td>This icon displays in gray to indicate that Mouse DynaSync is not available – you must use manual synching procedures. This is the default setting for all KVM Adapters other than the KA7166, KA7168, KA7169, KA7170, KA7175, KA7176, and KA7177.</td>
</tr>
<tr>
<td>![Green Check Mark]</td>
<td>The green check mark on this icon indicates that Mouse DynaSync is available and is enabled. This is the default setting when Mouse DynaSync is available. (See the Note, above.)</td>
</tr>
<tr>
<td>![Red X]</td>
<td>The red X on this icon indicates that Mouse DynaSync is available but is not enabled.</td>
</tr>
</tbody>
</table>

When Mouse DynaSync is available, clicking the icon toggles its status between enabled and disabled. If you choose to disable Mouse DynaSync mode, you must use the manual synching procedures described under Manual Mouse Synchronization, page 91.
Mac and Linux Considerations

- For Mac OS versions 10.4.11 and higher, there is a second DynaSync setting to choose from. If the default Mouse DynaSync result is not satisfactory, try the Mac 2 setting. To select Mac 2, right click in the text area of the Control Panel and select Mouse Sync Mode → Automatic for Mac 2:

![Control Panel with Mouse Sync Mode settings]

- Linux doesn’t support DynaSync Mode, but there is a setting on the Mouse Sync Mode menu for Redhat AS3.0 systems. If you are using a USB Adapter Cable (see the Note on the previous page), with an AS3.0 system and the default mouse synchronization is not satisfactory, you can try the Redhat AS3.0 setting. In either case, you must perform the manual mouse synchronization procedures described in the next section.

Manual Mouse Synchronization

If the local mouse pointer goes out of sync with the remote system's mouse pointer there are a number of methods to bring them back into sync:

1. Perform a video and mouse auto sync by clicking the Video Settings icon on the Control Panel (see page 75).
2. Perform an Auto Sync with the Video Adjustment function (see Video Settings, page 75, for details).
3. Invoke the Adjust Mouse function with the Adjust Mouse hotkeys (see Adjust mouse, page 67, for details).
4. Move the pointer into all 4 corners of the screen (in any order).
5. Drag the Control Panel to a different position on the screen.
6. Set the mouse speed and acceleration for each problematic server attached to the switch. See Additional Mouse Synchronization Procedures, page 271, for instructions.
Control Panel Configuration

Clicking the *Control Panel* icon brings up a dialog box that allows you to configure the items that appear on the Control Panel, as well as its graphical settings:

![Customize Control Panel dialog box](image)

The organization of the dialog box is described in the table, below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Customize Control Panel</td>
<td>Allows you to select which icons display in the Control Panel. Check the ones you want to see, uncheck the ones you don’t want.</td>
</tr>
<tr>
<td>Control Panel Style</td>
<td>✦ Enabling <em>Transparent</em> makes the Control Panel semi-transparent, so that you can see through it to the display underneath.</td>
</tr>
<tr>
<td></td>
<td>✦ Enabling <em>Icon</em> causes the Control Panel to display as an icon until you mouse over it. When you mouse over the icon, the full panel comes up.</td>
</tr>
</tbody>
</table>
### Screen Options

- If **Full Screen Mode** is enabled, the remote display fills the entire screen.
- If **Full Screen Mode** is not enabled, the remote display appears as a window on the local desktop. If the remote screen is larger than what is able to fit in the window, move the mouse pointer to the screen border that is closest to the area you want to view and the screen will scroll.
- If **Keep Screen Size** is enabled, the remote screen is not resized.
  - If the remote resolution is smaller than that of the local monitor, its display appears like a window centered on the screen.
  - If the remote resolution is larger than that of the local monitor, its display is centered on the screen. To access the areas that are off screen, move the mouse to the corner of the screen that is closest to the area you want to view and the screen will scroll.
- If **Keep Screen Size** is not enabled, the remote screen is resized to fit the local monitor’s resolution.

### Scrolling Method

In cases where the remote screen display is larger than your monitor, you can choose how to scroll to the areas that are off-screen.

- If you select **Mouse Movement**, the screen will scroll when you move the mouse pointer to your screen border.
- If you select **Scroll Bars**, scroll bars appear around the screen borders that you can use to scroll to the off-screen areas.

### Bus Info

- If **Bus Info** is enabled, the number of the bus you are on, as well as the total number of users on the bus, displays on the bottom row center of the Control Panel as follows: Bus No./Total Users. (See the Control Panel diagram on page 61 for an example.)

### Snapshot

These settings let the user configure the KVM over IP switch’s screen capture parameters (see the **Snapshot** description under The Control Panel, page 61):  
- **Path** lets you select a directory that the captured screens automatically get saved to. Click **Browse**, navigate to the directory of your choice; then click **OK**. If you don’t specify a directory here, the snapshot is saved to your desktop.
- Click a radio button to choose whether you want the captured screen to be saved as a BMP or a JPEG (JPG) file.
- If you choose JPEG, you can select the quality of the captured file with the slider bar. The higher the quality, the better looking the image, but the larger the file size.

### Keyboard Pass Through

When this is enabled, the Alt-Tab key press is passed to the remote server and affects that server. If it is not enabled, Alt-Tab acts on your local client computer.
The Java Control Panel

The Java Client Viewer and Java Client AP Control Panel is similar to the one used by the WinClient:

The major differences between them are:

- In the Macros dialog box, *Toggle Mouse Display* is not available.
- The *Dot* mouse pointer type is not available.
- In the Message Board, there is no *Show/Hide* button to show or hide the user list. This function is achieved by clicking the arrows at the top of the bar that separates the User List panel from the Main panel.
- In Virtual Media, only ISO and Folder are supported. See *Java Client Viewer / Java Client AP*, page 283 for further details.
- The Control Panel *Lock LED* icons are not in sync with your keyboard. When you first connect, the LED display may not be accurate. To be sure, click on the LED icons to set them.
- In *Control Panel Configuration*, the BMP Snapshot format has been replaced by PNG.
Chapter 6
Port Access

Overview

When you log in to the switch the *Port Access* page comes up with the KVM over IP switch’s KVM *Connections* page displayed.

**Browser GUI**

![Browser GUI](image1)

**AP GUI**

![AP GUI](image2)
The Connections page is organized into several main areas. All the devices, ports, and outlets that a user is permitted to access are listed in the Sidebar at the left of the page. In addition to KVM over IP device listings, if any PON (Power Over the Net™) devices are connected to the switches they are listed separately below the switch listings. If any Blade Servers have been deployed, they are listed separately below the PON devices.

Configuration and operation of KVM devices and ports are discussed on page 103; configuration and operation of PON devices and outlets are discussed on page 106; configuration and operation of Blade Servers are discussed on page 111.

**Note:** Power Over the Net™ devices are also referred to as PDUs (Power Device Units).

After selecting a device, port, or outlet in the Sidebar, clicking entries on the menu bar (Browser GUI) or tab bar (AP GUI) opens information and configuration pages related to the item selected in the Sidebar.
The Sidebar

All KVM switches, PON devices, and Blade Servers – including their ports and outlets – are listed in a tree structure in the Sidebar at the left of the screen:

The Sidebar Tree Structure

The characteristics of the Sidebar tree structure are the following:

- Users are only allowed to see the devices and ports/outlets that they have access permission for.
- Ports/outlets and child devices can be nested under their parent devices. Click the + in front of a device to expand the tree and see the ports/outlets nested underneath it. Click the - to collapse the tree and hide the nested ports/outlets.
- A port’s/outlet’s ID number is displayed in brackets next to its icon. The ports/outlets but can also be named (see Port/Outlet Naming, page 101, for details).
- Switches and ports that are on line have their monitor screen icons in Green; the monitor screens are Gray for devices and ports that are offline.
• Outlets that are On have their icons in Amber; the icons are Gray for outlets that are Off.

• To access and operate a port, double click its icon. Port operation details are discussed in Chapter 12, Port Operation.

**Note:**
1. In the Browser version, you can open as many port viewers as there are ports, but the number of ports that you see depends on the number of buses that the switch supports. For example, if the switch supports 4 buses, the 5th viewer displays the same port as the 1st viewer; the 6th viewer displays the same screen as the 2nd viewer, etc.
   In the AP GUI version you can only access one port at a time. To see two different ports, you would have to log in two separate times.

2. If the CC Management function is enabled (see page 170), PON devices and Blade Servers do not appear in the Sidebar, even if they are configured on the switch. This is because they are managed via the CC server.

**Scan**

Scan is found at the bottom of the AP GUI Sidebar. It automatically switches among all the ports that are visible in the Sidebar (see Filter, below), at regular intervals, so that their activity can be monitored automatically. See Auto Scanning, page 215 for details.

**Note:** This item doesn’t appear at the bottom of the Sidebar in the Browser version. In that version, you must invoke it from the port’s Toolbar. See The Port Toolbar, page 213 for details

**Array**

Array is found at the bottom of the AP GUI Sidebar. It represents another way of monitoring port activity. Under this function your screen is divided into a grid of panels, with each panel showing the video display of a particular port. Only ports that are visible in the Sidebar (see Filter, below), and that are on line are displayed – all other ports are blank. See Panel Array Mode, page 218 for details

**Note:** This item doesn’t appear at the bottom of the Sidebar in the Browser version. In that version, you must invoke it from the port’s Toolbar. See The Port Toolbar, page 213 for details
Filter

Filter allows you to control the number and type of ports that display in the Sidebar, as well as which ports get scanned when Auto Scan and Array Modes are invoked (see Scan and Array, above). When you click Filter, the bottom of the panel changes to look similar to the image, below:

The meanings of the choices are explained in the following table:

<table>
<thead>
<tr>
<th>Choices</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>All</td>
<td>This is the default view. With no other filter options selected, all of the ports that are accessible to the user are listed in the Sidebar. If any Favorites have been specified (see page 116), you can drop down the list box and select Favorites instead of All. If you select Favorites, only the items you have selected as Favorites display in the tree.</td>
</tr>
<tr>
<td>Powered On</td>
<td>If you enable Powered On (by putting a check in the checkbox) only the ports that have their attached devices powered on display in the tree.</td>
</tr>
<tr>
<td>Search</td>
<td>If you key in a search string and click Search, only port names that match the search string display in the tree. Wildcards (? for single characters; * for multiple characters) and the keyword or are supported, so that more than one port can show up in the list. For example: 1. If you key in Web*, both Web Server 1 and Web Server 2 show up in the list. 2. If you key in W<em>1 or M</em>2, both Web Server 1 and Mail Server 2 show up in the list.</td>
</tr>
<tr>
<td>Exit</td>
<td>Clicking Exit closes the filter dialog.</td>
</tr>
</tbody>
</table>
Sidebar Utilities

The AP GUI version Port Access Connections page provides a convenient method to work with the Sidebar tree. When you right click an item, a list with various options pops up:

![Expand Copy](image)

**Note:** The screenshot shows an example of just one of the pop-ups that can appear. The items that appear in the pop-up depend on whether you are logged in remotely or from a Local Console; what your user type is; and whether you selected a switch or a port.

The following table lists and explains all of the possible items that may appear:

<table>
<thead>
<tr>
<th>Item</th>
<th>User Type</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| **Expand/Collapse** | Administrators, Users | - If the device’s ports are nested (not displayed), the dialog box entry is **Expand**. Click **Expand** to display the nested ports.
- If the device’s ports are displayed, the dialog box entry is **Collapse**. Click **Collapse** to nest the ports.

**Note:**
1. This item only appears for switches, or for ports that have child devices connected to them.
2. This has the same effect as clicking the + or - in the tree structure. |
| **Copy**        | Administrators, Users | This item is only available for ports. After selecting **Copy**, you can Paste the port into the Favorites page. See Adding a Favorite, page 116 for details |
Port/Outlet Naming

For convenience – especially in large installations with many devices, ports and outlets – administrators and users with port configuration permission, can give each port or outlet a name. To assign, modify or delete a name, do the following:

1. Click once on the item you want to edit; wait a second; then click again.

   **Note:** 1. This is not a double click. It involves two separate clicks. A double click will switch you to the device attached to the port.

   2. In the AP GUI version you can right click on the port you want to edit, then select **Rename** in the popup box that appears, or you can highlight the port and press **F2**.

   After a second or two, the field changes to provide a text input box:

2. Key in a name for the item (or change/delete a previous one).
   - You can use any combination of letters, numbers, and symbols on the typewriter keys of keyboards with PC US English layout. In this case, the maximum number of characters allowed is 20.
   - You can also activate your local IME to input non-English characters. For languages that use 2 byte encoding, the maximum number of characters allowed is 9.
3. When you have finished editing the name, press [Enter] or click anywhere outside of the input box to complete the operation.
KVM Devices and Ports – Connections Page

For KVM over IP switches, the Connections page displays port status information at the device level, and port connection configuration options at the port level.

**Device Level**

When a KVM over IP switch is selected in the Sidebar, the Connections page displays a list of ports for the device that the user is authorized to access or view.

The following attributes are listed for each device:

- Port Number – the port’s number on the switch.
- Port Name – if a name has been assigned to a port it displays here.
- Device Name – if a name has been assigned to the switch it displays here.
- Status – the current status of the port – online, or offline.

**Note:** The sort order of the information displayed can be changed by clicking the column headings.

You can access a port from the main panel either by double clicking anywhere on its line entry, or selecting it anywhere on its line entry and clicking **Connect** at the bottom right of the page.
Port Level

When a port is selected in the Sidebar, the Connections page changes to display the port connection and configuration options:

The screen is divided into three major panels, as described in the sections that follow.

Status
The Status Panel displays the port’s current status information, including whether the port is online or offline, and if the port is mountable.

Click the Connect button to view the port display via the switch’s built-in Win Viewer (when using Windows Internet Explorer), or Java Viewer (when using other web browsers).

Associated Links
The Associated Links panel displays ports that have been associated with the currently selected port. Associations are configured on the Port Access → Port Configuration → Associated Links page (see page 131 for details).
Chapter 6. Port Access

Power Management

If a PN0108 is connected to the KVM over IP switch, and a device is connected to one of the PN0108’s outlets, you can power manage (On, Off, Reboot) selected outlets directly from this page, instead of having to select them on the PON device, itself.

Associating outlets with a port is accomplished on the Port Access → Port Configuration → Power Management page (see page 132 for details).

- If there is more than one outlet associated with this port, click on the line entry to select the one you want to manage, then click the On, Off, or Reboot icon, as appropriate.

Note: For the Reboot option, the outlet must be configured with System After AC Back or Modem Ring Resume as its operating mode.

- If there is more than one outlet associated with this port, and you want to power manage several of them at once, use Shift-Click (for a sequential set), or Ctrl-Click (for a non-sequential set) to select your group.

- If there is more than one outlet associated with this port, and you want to power manage all of them at once, click to put a checkmark in the Select All checkbox.

Note: 1. Even though the outlets all turn On, Off, or Reboot at the same time, they do so with their own separate outlet configuration settings (delay, operating mode, etc. See Port Configuration, page 128 for details).

2. For the Reboot option, the outlet must be configured with System After AC Back or Modem Ring Resume as its operating mode.

- The Synchronization checkbox is read only. Whether it is enabled or not is set on the Port Configuration → Power Management page (see page 128). When Synchronization is enabled, the outlets on devices with more than one power supply can all be operated at the same time.

Note: For the Reboot option, the outlets must be configured with System After AC Back as the operating mode.
Power Over the Net™ (PON) devices that are connected to the switches display below the KVM switches in the Sidebar. When a PON device is selected in the Sidebar, the Device Monitor page appears:

The Main Panel – PON View
PON View is the default page view, All PON devices and their outlets that are connected to the switch are listed under the Name column.

Outlets that are synchronized or that belong to groups have a green power outlet icon in front of their names. Click an outlet’s green icon to display which other outlets it synchronizes with, or is grouped with. Click the green outlet again to close the information display.

The Description column displays which KVM port the outlet is associated with.

**Action Buttons**
The actions that the buttons at the bottom of the page perform are described in the table below:

<table>
<thead>
<tr>
<th>Button</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group View</td>
<td>Click this button to switch the display to Group View – see The Main Panel – Group View, page 109 for details.</td>
</tr>
<tr>
<td>Group</td>
<td>Select the outlets that you want to form into a group, then click this button to create it (see Outlet Groups, page 108 for details).</td>
</tr>
<tr>
<td>Ungroup</td>
<td>Select the outlets that you want to remove from a group, then click this button to remove them</td>
</tr>
<tr>
<td>On</td>
<td>Sends a Power On signal to the selected outlet(s).</td>
</tr>
<tr>
<td>Off</td>
<td>Sends a Power Off signal to the selected outlet(s).</td>
</tr>
<tr>
<td>Reboot</td>
<td>Sends a Reboot signal to the selected outlet(s).</td>
</tr>
</tbody>
</table>
Outlet Groups

To create outlet groups, do the following:

1. Select the outlets you want to include in the group.
2. Click **Group**.
   
The Outlet Group dialog box comes up:

   ![Outlet Group dialog box](image)

3. Select whether or not the outlets will belong to a new group or to an existing group.
   
a) If it is a new group, give it a name in the text field.
b) If it is an existing group, select the group in the central panel.
4. Click **Save**.

To remove outlets from groups, select them in the main panel, then click **Ungroup**.
Chapter 6. Port Access

The Main Panel – Group View

- Clicking the PON View button takes you back to the PON View page.
- To delete a group, select it in the main panel, then click **Delete**.
- Selecting a group in the main panel, then clicking **Ungroup**, removes all outlets from that group. It provides a shortcut method to remove all of them at once, rather than having to remove them one by one from the PON View page.
- To power manage a group of outlets, first select the group(s) in the main panel, then click the appropriate power button.
Outlet Settings

When an outlet is selected in the Port Access page Sidebar, the Outlet Settings page appears:

- The Outlet Properties panel indicates the name of the PON that the outlet belongs to and the outlet’s name, as well as On, Off, Reboot, and Configuration buttons to manually manage the outlet’s power.

- The Schedule panel lets you set up an automated Power management configuration for the outlet. The procedure for accomplishing this is the same as the one described in the Power Management section. See Schedule, page 135 for details.
Blade Servers – Connections Page

Blade Servers that are connected to the switches display below the KVM switches and PON devices in the Sidebar.

This section describes accessing and configuring the blade servers, and associating the blades with KVM switch ports. By associating a blade server or blade with a port the servers and blades are integrated into the Sidebar tree view, and appear as devices connected to the port.

The Blade Configuration Page

The Blade Configuration page is where the associations between the blade servers and the KVM switch ports get made. To access this page, select the blade server or blade then click Blade Configuration (the menu item at the far right of the menu bar).

For IBM and Dell blade servers, the entire chassis gets associated with a port, and each blade in the chassis will appear in the tree as a child port of the associated port – as in port 08 in the screenshot at the right.

For HP blade servers, associations are made on a blade by blade basis. Each blade is associated with a single port.

To access a blade, click on its port entry in the tree.
Associating Ports

Main Panel Device View
Port association begins by clicking the Blade Configuration menu item at the far right of the menu bar. The page comes up in Device View, listing all of the KVM switch’s ports, and the blade servers (IBM and Dell servers), or individual blades (HP servers) that have been associated with them:

To make an association from the device view, you first select a KVM port, then select a blade server or blade to associate it with as follows:

1. Select the port in the main panel
2. Click Associate
3. In the screen that comes up, select the blade server or individual blade that you want to associate with the selected port.
4. Click **Save**.

After the association completes successfully, the *blade icon* appears as the port indicator in the Sidebar tree. To access the device running on the blade, click on its entry in the Sidebar.

**Main Panel Blade View**
At the bottom of the Device View main panel is a button labeled *Blade View*. This is a button that toggles the main panel between the two views. Click it to bring up the main panel in Blade View:

Blade View lists all of the blade servers (IBM and Dell servers) and individual blades (HP servers) that are installed on the system, and the ports (if any) that they are associated with.

To make an association from the blade view, you first select a blade server or blade, then select a KVM port to associate it with as follows:

1. Select the blade server or blade in the main panel.
2. Click **Associate** (at the bottom of the main panel).
3. In the screen that comes up, select the port that you want to associate it with.

![Port Association Screen]

4. Click Save.

After the association completes successfully, the blade icon appears as the port indicator in the Sidebar tree. To access the device running on the blade, click on its entry in the Sidebar.

**Unassociating Ports**

To break the association between a port and a blade server or individual blade, select the association in the main panel, then click **Unassociate**.
History

The History page provides a record of each time that a port was accessed. It provides quick access to the most recently used ports. You can access a port shown in the main panel by double clicking it.

- If there are more entries than there is room on the screen, a scroll bar appears to let you scroll up and down to see the entire record.
- To clear the record and start over, click the Clear History button at the bottom right of the page.

**Note:** You can change the sort order of the information displayed by clicking the column headings.
Favorites

The Favorites page is similar to a bookmarks feature. Ports that you frequently access can be saved in a list here. Simply open this page and select the port – rather than hunting for it in the Sidebar. This feature is especially handy on large, crowded installations:

Adding a Favorite
To add a port to the favorites, do the following:

1. Right click in the main panel; click Add Favorite.
   — or —
   Click Add at the bottom left of the main panel.
   An Untitled Favorite entry appears:
2. This will be a container to hold your port entries. Click inside the text entry box to erase *Untitled Favorite* and key in an appropriate name, then click on any empty space in the main panel.

3. To add a port:
   Drag it from the Sidebar and drop it onto the container
   – or –
   Right Click on it in the Sidebar; select **Copy**. Right click on the container; select **Paste**.
   – or –
   Select the container in the main panel; select the port in the Sidebar; then click **Add to** at the bottom of the main panel.
   
   The switch that the port belongs to is added to the container; the selected port is appended under the switch.

   **Note:** To add multiple ports at the same time, hold the Shift or Ctrl key down while you make your Sidebar selections then drag or copy the entire group to the Favorites panel.

4. Repeat step 3 for any other **Favorite** categories you wish to create

   **Note:** Favorites can be selected for filtering in the Sidebar. See **Filter**, page 99 for details
Modifying a Favorite

- To modify a Favorite, or one of the items contained in it, right click on it, then select a choice from the popup menu that appears.
- To edit a Favorite’s name:
  Click on it once, wait a second, then click again. You can edit the name after the display changes to provide a text input box. This is the same procedure as the one described for port naming (see Port/Outlet Naming, page 101).
  – or –
  Select the Favorite in the main panel, then click Modify at the bottom of the main panel.
User Preferences

The User Preferences page allows users to set up their own, individual, working environments. The switch stores a separate configuration record for each user profile, and sets up the working configuration according to the Username that was keyed into the Login dialog box:

The page settings are explained in the following table:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Language</td>
<td>Selects the language that the interface displays in.</td>
</tr>
<tr>
<td>OSD Hotkey</td>
<td>Selects which Hotkey controls the GUI function: [Scroll Lock] [Scroll Lock] is the default. To select a different combination, click the arrow at the right of the box to drop down the list of choices.</td>
</tr>
<tr>
<td>ID Display</td>
<td>Selects how the Port ID is displayed: the Port Number alone (PORT NUMBER); the Port Name alone (PORT NAME); or the Port Number plus the Port Name (PORT NUMBER + PORT NAME). The default is PORT NUMBER + PORT NAME.</td>
</tr>
<tr>
<td>ID Duration</td>
<td>Determines how long a Port ID displays on the monitor after a port change has taken place. You can choose an amount from 1—255 seconds. The default is 3 Seconds. A setting of 0 (zero) means the Port ID is always on.</td>
</tr>
<tr>
<td>Setting</td>
<td>Function</td>
</tr>
<tr>
<td>----------------------</td>
<td>--------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Scan Duration</td>
<td>Determines how long the focus dwells on each port as it cycles</td>
</tr>
<tr>
<td></td>
<td>through the selected ports in Auto Scan Mode (see Auto Scanning, page 215). Key in a value from 1—255 seconds. The default is 5 seconds; a setting of 0 disables the Scan function.</td>
</tr>
<tr>
<td>Screen Blanker</td>
<td>If there is no input from the console for the amount of time set with</td>
</tr>
<tr>
<td></td>
<td>this function, the screen is blanked. Key in a value from 1—30 minutes. A setting of 0 disables this function. The default is 0 (disabled).</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Although this function can be set from either the local</td>
</tr>
<tr>
<td></td>
<td>console or a remote login, it only affects the local console monitor.</td>
</tr>
<tr>
<td>Logout Timeout</td>
<td>If there is no user input for the amount of time set with this function, the user is automatically logged out. A login is necessary before the KVM over IP switch can be accessed again.</td>
</tr>
<tr>
<td>Toolbar</td>
<td>Selects whether or not the Port Toolbar is enabled when a port is</td>
</tr>
<tr>
<td></td>
<td>accessed (see The Port Toolbar, page 213 for details).</td>
</tr>
<tr>
<td></td>
<td>Since the Toolbar functions are also available from the GUI Control Panel (see The Control Panel, page 61), you may prefer to disable it here.</td>
</tr>
<tr>
<td>Viewer*</td>
<td>You can choose which viewer is used when accessing a server:</td>
</tr>
<tr>
<td></td>
<td>* Auto Detect will select the appropriate viewer based on the web browser used; WinClient for Windows Internet Explorer, Java Client for other web browsers (ex. Firefox),</td>
</tr>
<tr>
<td></td>
<td>* Java Client will open the Java based viewer regardless of the web browser being used.</td>
</tr>
<tr>
<td>Welcome Message*</td>
<td>You can choose to hide or show the welcome message displayed in the submenu bar. The default is disabled.</td>
</tr>
<tr>
<td>Save</td>
<td>Click Save to save any changes made to the User Preferences settings.</td>
</tr>
<tr>
<td>Changing a Password</td>
<td>* In the Browser GUI, to change a user’s password, key in the old password and new password into their input boxes; key the new password into the Confirm input box, then click Change Password to apply the change.</td>
</tr>
<tr>
<td></td>
<td>* In the AP GUI version, click Change Password; key in the old password and new password into their input boxes; key the new password into the Confirm input box, then click Save.</td>
</tr>
</tbody>
</table>

* This item is only available with the Browser version.
Sessions

The Session page lets the administrator and users with User Management permissions see at a glance which users are currently logged into the KVM over IP switch, and provides information about each of their sessions.

Note: 1. The Session page isn’t available for ordinary users.
2. Users with User Management permissions can only see the sessions of ordinary users
3. The Category heading lists the type of user who has logged in: SA (Super Administrator); Admin (Administrator); Normal user (User).

The meanings of the headings at the top of the page are fairly straightforward. The IP heading refers to the IP address that the user has logged in from; the Device and Port headings show which device and port the user is currently accessing. The Bus ID refers to the bus that the user is currently on (Bus 0 refers to the Local Console’s bus).

Note: 1. The sort order of the information displayed can be changed by clicking the column headings.
2. The Bus ID also displays on the control panel (see page 61). See Users and Buses, page 221 for information about buses.

This page also gives the administrator the option of forcing a user logout by selecting the user and clicking End Session at the bottom of the main panel.
Access

Administrators use the Access page to set user and group access and configuration rights for switches and ports.

**Note:** The Access page only appears for those users with User Management permissions. It isn’t available for other users.

Device Level Browser GUI Interface

If a switch is chosen in the Sidebar, the Main panel looks similar to the one shown below:

The main panel consists of two columns: **Name** and **Config**:
- **Name** lists all the users and groups that have been created.
- **Config** indicates the users who have Configuration privileges. A check mark (✓) indicates that the user has permission to make changes to the switch configuration settings (see Chapter 8, Device Management); an X means that the user is denied permission to make configuration changes. Click the icon to toggle permission for Administrators and Users (Super Administrators always have configuration privileges).
The Copy and Paste buttons at the bottom of the main panel provide a shortcut method of assigning the permissions settings of one port to any of the other ports. To do so:

1. Select the port whose permissions you want the other port(s) to follow.
2. Click Copy.
3. Select the port you want to receive the permissions.
4. Click Paste.

When you have finished making your configuration changes, click Save.

Port Level Browser GUI Interface

If a port is chosen in the Sidebar, the Main panel looks similar to the one shown below:
The port access settings are explained in the following table:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Each port accessible to the user is listed under the <em>Names</em> column.</td>
</tr>
<tr>
<td>Access</td>
<td>The Access column is where device access rights are set. To cycle through</td>
</tr>
<tr>
<td></td>
<td>the choices, click the icon in the row that corresponds to the user you</td>
</tr>
<tr>
<td></td>
<td>want to configure. The meanings of the icons are as follows:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Full Access</strong>: The user can view the remote screen and can perform</td>
</tr>
<tr>
<td></td>
<td>operations on the remote server from his keyboard and monitor.</td>
</tr>
<tr>
<td></td>
<td>- <strong>View Only</strong>: The user can only view the remote screen; he cannot</td>
</tr>
<tr>
<td></td>
<td>perform any operations on it.</td>
</tr>
<tr>
<td></td>
<td>- <strong>No Access</strong>: No access rights - the Port will not show up on the User's</td>
</tr>
<tr>
<td></td>
<td>list on the Main Screen.</td>
</tr>
</tbody>
</table>

**Mount USB**: The Mount USB column is where permission to mount Virtual Media devices on remote servers is configured. To cycle through the choices, click the icon in the row that corresponds to the user you want to configure. The icons are the same as the ones in the Access column.

- With a **Full Access** setting, the user can mount, read, and write to the virtual media.
- With a **View Only** setting, the user can only view the contents of the virtual media (read only), he cannot perform any operations on it.
- With a **No Access** setting, the user will not see the virtual media even if it has been configured on the remote system.

**Note**: This entry does not appear for switches that do not support the USB Virtual Media function.

**Config**: Sets or denies permission for the user to make changes to a port’s configuration settings. A check mark (✓) indicates that the user has permission; an X means that the user does not have permission.

**PON**: The PON column permits/restricts the configuration and power operation of ports that have Power Over the Net™ devices connected to them. A check mark (✓) indicates that the user has permission; an X means that the user does not have permission.
Device Level AP GUI Interface

If a switch is chosen in the Sidebar, the Main panel looks similar to the one below:

![Device Level AP GUI Interface](image)

The page is essentially the same as the one for the Browser GUI (see page 122), with the exception that there are filters at the top of the columns. The filters allow you to expand or limit the scope of the users and groups that are displayed, as described in the following table:

<table>
<thead>
<tr>
<th>Filter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>To filter on the User or Group name, key in the name, partial name or partial name, then press Enter. Only the Users and Groups whose names correspond to what you have keyed in appear in the list. Wildcards (?) for single characters; * for multiple characters) and the keyword &quot;or&quot; are supported. E.g., h<em>ds would return hands and hoods; h?nd would return hand and hind, but not hard; h</em>ks would return hands and hooks.</td>
</tr>
<tr>
<td>Config</td>
<td>All Users and Groups appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Permitted Only Users and Groups with configuration permissions appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Restricted Only Users and Groups that do not have configuration permissions appear in the list.</td>
</tr>
</tbody>
</table>
Port Level AP GUI Interface

If a port is chosen in the Sidebar, the Main panel looks similar to the one below:

The page is essentially the same as the one for the Browser GUI (see page 123), with the exception that there are filters at the top of the columns. The filters allow you to expand or limit the scope of the users and groups that are displayed, as described in the following table:

<table>
<thead>
<tr>
<th>Filter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>To filter on the User or Group name, key in the name, partial name, or partial name and wild card (*) then press Enter. Only the Users and Groups whose names correspond to what you have keyed in appear in the list.</td>
</tr>
<tr>
<td>Access</td>
<td></td>
</tr>
<tr>
<td>All</td>
<td>All Users and Groups appear in the list.</td>
</tr>
<tr>
<td>Full Access</td>
<td>Only Users and Groups with Full Access permissions appear in the list.</td>
</tr>
<tr>
<td>View Only</td>
<td>Only Users and Groups with View Only permissions appear in the list.</td>
</tr>
<tr>
<td>No Access</td>
<td>Only Users and Groups with No Access permissions appear in the list.</td>
</tr>
</tbody>
</table>
Saving Changes

Click the Save button at the lower right corner of the page to save any changes made on the Access page.
Port Configuration

Device Level

When a device is selected in the Sidebar, the only item available under Port Configuration is the Port Properties page with one field to configure: the *Occupy Timeout* setting:

The Occupy Timeout field sets a time threshold for users on ports whose Access Mode has been set to Occupy (see *Access Mode*, page 130). If there is no activity from the user occupying the port for the amount of time set here, the user is timed out and the port is released. The first user to send keyboard or mouse input after the port has been released gets to occupy the port.

Input a value from 0 to 255 seconds. The default is 3 seconds. A setting of 0 causes the port to be released the instant there is no input.
## Port Level

### Port Properties

When a port is selected in the Sidebar, the Port Properties page looks similar to the one below:

<table>
<thead>
<tr>
<th>Port Property</th>
<th>Status</th>
<th>Properties</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Port Status:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Online</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Adapter Type:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>L4275</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Adapter Version:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>11.0.0.0.0</td>
<td></td>
</tr>
</tbody>
</table>

- The **Status** panel provides information as to whether or not the port is online or offline; the Adapter cable used to connect the server (or other device) to the port; and the Adapter’s firmware level.
- The **Properties** panel allows you to make configuration settings for the selected port. An explanation of the Port Properties configuration fields is given on the next page, please refer to the table on page 130 for further details.
- The **Exit Macro** panel contains a dropdown listbox of user created System macros. You can select a macro from the list that will execute when exiting the remote server. See **System Macros**, page 72 for details on creating exit macros.
An explanation of the configuration fields is given in the table, below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port OS</td>
<td>Specifies the operating system that the server on the connected port is using. Choices are Win, Mac, Sun, and Other. The default is Win.</td>
</tr>
<tr>
<td>OS Language</td>
<td>Specifies the OS language being used by the server on the connected port. Drop down the list to see the available choices. The default is English US.</td>
</tr>
</tbody>
</table>
| Access Mode | Defines how the port is to be accessed when multiple users have logged on, as follows:  
  **Exclusive:** The first user to switch to the port has exclusive control over the port. No other users can view the port. The **Timeout** function does not apply to ports which have this setting.  
  **Occupy:** The first user to switch to the port has control over the port. However, additional users may view the port's video display. If the user who controls the port is inactive for longer than the time set in the **Timeout** box, port control is transferred to the first user to move the mouse or strike the keyboard.  
  **Share:** Users simultaneously share control over the port. Input from the users is placed in a queue and executed chronologically. Under these circumstances, users can take advantage of the **Message Board**, which allows users to communicate with each other regarding control of the keyboard and mouse or keyboard, mouse, and video of a Share port (see The **Message Board**, page 80). |

When you have finished making your configuration changes, click **Save**.
Associated Links
The Associated Links page provides a method of associating other ports on the same switch to the selected port. This function is primarily intended to be used when connecting both KVM and serial ports (KA7140, KA9140) from a single server to the switch.

To associate a port with the currently selected one, click Add. In the dialog box that appears, key in the port’s number, then click OK. The port’s number and name appear in the main panel.

To remove an unwanted associated port, select it in the main panel, then click Remove.
Power Management

The Power Management page is used to associate a PON power outlet with a KVM port on the KVM over IP switch. Once an association has been made, the power status of the device attached to the KVM port can be controlled from the Port Access page, rather than having to control the power status by opening a separate web session to the PON device.

When the Power Management page comes up, it looks similar to the one below:

![Power Management Page]

Note: This page is only available when a PON device is connected to the switch.

- Adding/Removing Associations:
  To associate an outlet with the selected port, do the following:
  1. Click Add.
     The PON Mapping dialog box comes up with a list of all the outlets available for association.
2. Check the outlet or outlets you want to associate with the port.
3. Click **OK**.

To disassociate an outlet from a port, select it in the main panel and click **Remove**.

- **Configuration**

You can configure an outlet’s settings directly from this page by clicking the **Configuration** button. When you do, the *Pon Outlet Configuration* dialog box appears:

Set the configuration options according to the information in the table, below:

<table>
<thead>
<tr>
<th>Heading</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Station</td>
<td>The name of the device that the outlet belongs to.</td>
</tr>
<tr>
<td>Port</td>
<td>The outlet’s current name</td>
</tr>
<tr>
<td>Name</td>
<td>An editable field for naming the outlet. Each outlet can be given a distinctive name. The maximum number of characters is 15.</td>
</tr>
</tbody>
</table>
Mode

Drop down the list to select a choice of power operation mode, as follows:

- *Wake On LAN*, and *System after AC Back* are Safe Shutdown and Reboot options, and can be used for scheduled restarts.

  When an Outlet's Power Button is clicked OFF, the PON device first sends a message to the computer telling it to prepare for a shutdown; it then waits for the amount time set in the Power Off Delay field to give the computer time to close down, and then turns off the power.

  When it is time to turn the power On, the PON device waits for the amount time set in the *Power On Delay* field, and then - depending on the mode chosen - either calls the computer's modem or sends an Ethernet message to the computer instructing it to start up again.

  **Note:** Refer to your PON manual for details on setting up Safe Shutdown and Reboot.

- *If Kill the Power* is selected, the PON device waits for the amount time set in the Power Off Delay field, and then turns the Outlet's power Off. Turning the power off performs a cold (non-safe) shutdown. There is no scheduled restart available with this shutdown method.

<table>
<thead>
<tr>
<th>Heading</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mac Address</td>
<td>The Mac Address of the PON unit goes here.</td>
</tr>
</tbody>
</table>
| Power On Delay | Sets the amount of time the PON device waits after the Power Button is clicked before it turns on the computer attached to the corresponding outlet.  
  **Note:** The default delay time is 0 seconds; the maximum is 999 seconds. When a series of outlets are scheduled to be powered up, they turn on in sequence with a default delay of 10 milliseconds between each outlet. |
| Power Off Delay| Sets the amount of time the PON device waits after the Power Button is clicked before it shuts down the computer attached to the corresponding outlet.  
  For the *System after AC Back* option, after the delay time expires, the PON device waits another fifteen seconds, then shuts the computer down.  
  The default delay time is 15 seconds. The maximum delay time is 999 seconds. |
• Schedule
  Clicking the Schedule button brings up a dialog box that lets you set up an automated power management configuration for the outlet(s) associated with the selected port.

• Adding an Outlet Schedule
  To set up an outlet schedule, do the following:

  1. Select the desired outlet in the main panel, then click Schedule. The PON Outlet Schedule dialog box with default settings, similar to the one below, comes up:

  ![PON Outlet Schedule dialog box]

  2. Click Add. An Outlet Schedule dialog box, similar to the one below, comes up:

  ![Outlet Schedule dialog box]
3. Configure the outlet according to the information provided in the following table:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Schedule Name</td>
<td>Provide a name to identify the scheduled operation by.</td>
</tr>
<tr>
<td>Operation Mode</td>
<td>Select the type of power operation you want to occur at the scheduled time.</td>
</tr>
<tr>
<td>Period</td>
<td>Select the time period that the scheduled operation will occur at: Once; Weekdays; or Daily – then drop down the list to select which day the operation is to start on.</td>
</tr>
<tr>
<td>Time</td>
<td>Click the Date/Time button to select the time and date the operation is to start on.</td>
</tr>
</tbody>
</table>

**Note:** If there is a conflict between the day set in the Period panel and the time the operation is supposed to start, a message will appear informing you of the problem. Click the Date/Time button and reset the time and date.

4. When you have finished making your configuration settings, click **Save**.

5. Repeat the above steps to set up additional schedules.

- To modify a schedule, select it in the main panel, then click **Modify**. The Outlet Schedule dialog box comes up – make your changes, then click **Save**.
- To delete a schedule, select it in the main panel, then click **Remove**.
- To run all power operations listed in the Outlet Schedule dialog box now – without waiting for the scheduled time to arrive – click **Run**.
- To stop all power operations listed in the Outlet Schedule dialog box, click **Stop**.
- **Synchronization**
  If more than one outlet has been selected for association with a port, **Synchronization** can be used to standardize their configurations.

  Enabling **Synchronization** (by checking the checkbox), brings up the Pon Outlet Configuration dialog box (see **Configuration**, page 133).

  The settings that you make are applied to all the outlets associated with the port so that their settings are all the same, and all the outlets associated with the port have the same schedule configuration as the first PON outlet.
Chapter 7
User Management

Overview
When you select the User Management tab the screen comes up with the Users page displayed:

Browser GUI

![Browser GUI Image]

AP GUI

![AP GUI Image]
The page is organized into two main areas: the Sidebar at the left, and the large main panel at the right.

- Users and groups appear in the panel at the left of the page. The large panel at the right provides more detailed information at-a-glance for each.
- The Browser GUI has separate menu bar entries for Accounts (Users) and Groups. Depending on the menu item selected, either Users or Groups are listed in the Sidebar.
- The AP GUI doesn’t have menu entries. Instead, Users and Groups are listed separately in the Sidebar.
- In the Browser GUI, the sort order of the information displayed can be changed by clicking the main panel column headings.
- In the AP GUI, the section below the Sidebar list provides a filter that allows you to manage the list:
  - Click the arrow at the right of the list box to select whether you want to view only Users, only, Groups, or both Users and Groups.
  - Click to put a check in the Active checkbox to filter out any users whose accounts are not active.
  - To only select Users or Groups that match a particular string, key it into the text box in front of the Go button, then click Go. Only Users or Groups that match the string will appear in the list. Wildcards (? for single characters; * for multiple characters) and the keyword or are supported. E.g., h*ds would return hands and hoods; h?nd would return hand and hind, but not hard; h*ds or h*ks would return hands and hooks.
- The buttons below the main panel are used to manage users and groups, as shown in the sections that follow.
Users

The KVM over IP switch supports three types of user, as shown in the table, below:

<table>
<thead>
<tr>
<th>User Type</th>
<th>Role</th>
</tr>
</thead>
<tbody>
<tr>
<td>User</td>
<td>Access authorized ports and devices. Manage authorized ports and devices; configure personal working environment.</td>
</tr>
</tbody>
</table>

Note: Users who have been given permission to do so, may also manage other users.

Adding Users

To add a user, and assign user permissions, do the following:

1. Select Users on the menu bar (Browser GUI)
   – or –
   Select Users in the Sidebar (AP GUI).
2. Click Add at the bottom of the main panel. The User notebook opens, with the User tab selected:
3. Enter the required information in the appropriate fields. A description of each of the fields is given in the table below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>From 1 to 16 characters are allowed depending on the Account Policy settings. See Account Policy, page 180.</td>
</tr>
<tr>
<td>Password</td>
<td>From 0 to 16 characters are allowed depending on the Account Policy settings. See Account Policy, page 180.</td>
</tr>
<tr>
<td>Confirm Password</td>
<td>To be sure there is no mistake in the password, you are asked to enter it again. The two entries must match.</td>
</tr>
<tr>
<td>Description</td>
<td>Additional information about the user that you may wish to include.</td>
</tr>
</tbody>
</table>
| Role           | There are three categories: Super Administrator, Administrator and User. There is no limitation on the number of accounts that can be created in each category.  
- The Super Administrator is responsible for the overall installation configuration and maintenance; user management; and device and port assignments. The Super Administrator's permissions (see page 141) are automatically assigned by the system and cannot be altered.  
- The default permissions for Administrators include everything except Force to Grayscale, but the permissions can be altered for each Administrator by checking or unchecking any of the permissions checkboxes.  
- The default permissions for Users include the Win, Java, and SSH clients, but the permissions can be altered for each User by checking or unchecking any of the permissions checkboxes.  

**Note:** Users who have been given User Management privileges cannot access or configure Groups.
Permissions

Note: For ordinary users, in addition to enabling Device Management, Port Configuration, and Maintenance permissions, the user must also be given those rights for each device and port that he will be allowed to manage. See Device Assignment, page 151 for details.

- Enabling Device Management allows a user to configure and control the settings for overall KVM over IP switch operations (see Device Management, page 155).
- Enabling Port Configuration allows a user to configure and control the settings for individual ports (see Port Configuration, page 128).
- Enabling User Management allows a user to create, modify, and delete user and group accounts.
- Enabling Maintenance allows a user to perform all the Maintenance operations available under the Maintenance tab (see Maintenance, page 197).
- Enabling System Log allows a user to access the system log (see Log, page 193).
- Enabling View Only limits users to only being able to view the display of connected devices. They cannot control port access, nor can they input any keyboard or mouse signals to the devices they view.
- Enabling Windows Client allows a user to download the Windows Client AP software, and access the KVM over IP switch with it, in addition to (or instead of) the browser access method.
- Enabling Java Client allows a user to download the Java Client AP software, and access the KVM over IP switch with it, in addition to (or instead of) the browser access method.
- Enabling SSH Client allows a user to log in and access the KVM over IP switch via an SSH session.
- Enabling Telnet Client allows a user to log in and access the KVM over IP switch via a Telnet session.
- Force to Grayscale forces the user’s view of the remote display to be in grayscale. This can speed up I/O transfer in low bandwidth situations.
4. At this point you can assign the new user to a group by selecting the Groups tab – the Groups page is discussed on page 147. You can also assign the user’s port access rights by selecting the Devices tab – the Devices page is discussed on page 151.

**Note**: Optionally, you can skip this step now to add more users and create groups, and come back to it later.

5. When your selections have been made click **Save**.

6. When the *Operation Succeeded* message appears, click **OK**.
7. Click **Users** in the Sidebar to return to the main screen. The new user appears in the Sidebar list and in the main panel, as well.
   - The Sidebar **Users** list can expand and collapse. If the list is expanded, click the minus symbol (−) next to the **Users** icon to collapse it; if it is collapsed there is a plus symbol (+) next to the icon. Click the plus symbol to expand it.
   - The icon for super administrators has two black bands; the icon for administrators has one red band.
   - The large main panel shows the user’s name; the description that was given when the account was created; and whether the account is currently active or has been disabled.

**Modifying User Accounts**

To modify a user account, do the following:

1. In the Sidebar **User** list, click the user’s name – or – in the main panel, select the user’s name
2. Click **Modify**.
3. In the **User** page that comes up, make your changes, then click **Save**.

**Note:** The **User** page is discussed on page 139; the **Groups** page is discussed on page 147, the **Devices** page is discussed on page 151.

**Deleting User Accounts**

To delete a user account do the following:

1. In the main panel, select the user’s name.
2. Click **Delete**.
3. Click **OK**.
Groups

Groups allow administrators to easily and efficiently manage users and devices. Since device access rights apply to anyone who is a member of the group, administrators need only set them once for the group, instead of having to set them for each user individually. Multiple groups can be defined to allow some users access to specific devices, while restricting other users from accessing them.

Creating Groups

To create a group, do the following:

1. Select Groups on the menu bar (Browser GUI)
   – or –
   Select Groups in the Sidebar (AP GUI).

2. Click Add at the bottom of the main panel. The Group notebook opens, with the Group tab selected:
3. Enter the required information in the appropriate fields. A description of each of the fields is given in the table below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group Name</td>
<td>A maximum of 16 characters is allowed.</td>
</tr>
<tr>
<td>Description</td>
<td>Additional information about the user that you may wish to include. A maximum of 63 characters is allowed.</td>
</tr>
<tr>
<td>Permissions</td>
<td>Permissions and restrictions for groups are set by checking the appropriate boxes. These are the same permissions as the ones specified for Users. See Permissions, page 141 for details.</td>
</tr>
</tbody>
</table>

4. At this point you can assign users to the group by selecting the Members tab – the Members page is discussed on page 149. You can also assign the group’s port access rights by selecting the Devices tab – the Devices page is discussed on page 151.

**Note:** Optionally, you can skip this step now to add more groups and assign users to them, and come back to it later.

5. When your selections have been made click **Save**.

6. When the *Operation Succeeded* message appears, click **OK**.

7. Click **Group** in the Sidebar to return to the main screen. The new group appears in the Sidebar Group list and in the main panel.
   - The Sidebar Group list can expand and collapse. If the list is expanded, click the minus symbol (−) next to the Users icon to collapse it; if it is collapsed there is a plus symbol (+) next to the icon. Click the plus symbol to expand it.
   - The large main panel shows the group’s name, and the description that was given when the group was created (the Status column is inactive).

Repeat the above procedure to add additional groups.

**Note:** You must perform Step 7 before attempting to add a new group, or else the new group you are creating will replace the group you just finished creating.
Modifying Groups
To modify a group, do the following:
1. In the Sidebar Group list, click the group’s name
   – or –
   In the main panel, select the group’s name.
2. Click Modify.
3. In the Group notebook that comes up, make your changes, then click Save.

Note: The Group page is discussed on page 144; the Members page is discussed on page 149, The Devices page is discussed on page 151.

Deleting Groups
To delete a group do the following:
1. In the Sidebar, click the Groups icon.
2. In the main panel, select the group’s name.
3. Click Delete.
4. Click OK.
There are two ways to manage users and groups: from the Users notebook; and from the Group notebook.

Note: Before you can assign users to groups, you must first create them. See Adding Users, page 139 for details.

Assigning Users to a Group From the User’s Notebook
To assign a user to a group from the User’s notebook, do the following:

1. In the Sidebar User list, click the user’s name
   – or –
   In the main panel, select the user’s name
2. Click Modify.
3. In the User notebook that comes up, select the Groups tab. A screen, similar to the one below, appears:

   ![User Notebook Screenshot](image)

4. In the Available column, select the group that you want the user to be in.
5. Click the Right Arrow to put the group’s name into the Selected column.
6. Repeat the above for any other groups that you want the user to be in.
7. Click Save when you are done.

Note: If a user has permissions in addition to the ones assigned to the group, the user keeps those permissions in addition to the group ones.
Removing Users From a Group From the User's Notebook

To remove a user from a group from the User’s notebook, do the following:

1. In the Sidebar User list, click the user’s name
   - or -
   In the main panel, select the user’s name.

2. Click Modify.

3. In the User notebook that comes up, select the Groups tab. A screen, similar to the one below, appears:

4. In the Selected column, select the group that you want to remove the user from.

5. Click the Left Arrow to remove the group’s name from the Selected column. (It goes back into the Available column.)

6. Repeat the above for any other groups that you want to remove the user from.

7. Click Save when you are done.
Assigning Users to a Group From the Group's Notebook

To assign a user to a group from the Group notebook, do the following:

1. In the Sidebar Group list, click the group’s name
   — or —
   In the main panel, select the group’s name.

2. Click Modify.

3. In the Group notebook that comes up, select the Members tab. A screen, similar to the one below, appears:

4. In the Available column, select the user that you want to be a member of the group.

5. Click the Right Arrow to put the user’s name into the Selected column.

6. Repeat the above for any other users that you want to be members of the group.

7. Click Save when you are done.

Note: If a user has permissions in addition to the ones assigned to the group, the user keeps those permissions in addition to the group ones.
Removing Users From a Group From the Group’s Notebook

To remove a user from a group from the Group’s notebook, do the following:

1. In the Sidebar Group list, click the group’s name
   -- or --
   In the main panel, select the group’s name.

2. Click Modify.

3. In the Group notebook that comes up, select the Members tab. A screen, similar to the one below, appears:

4. In the Selected column, select the user that you want to remove from the group.

5. Click the Left Arrow to remove the user’s name from the Selected column. (It goes back into the Available column.)

6. Repeat the above for any other users that you want to remove from the group.

7. Click Save when you are done.
Device Assignment

When a user logs in to the KVM over IP switch, the interface comes up with the Port Access page displayed. All the ports that the user is permitted to access are listed in the Sidebar at the left of the page. Access permissions for those ports and the devices connected to them are assigned on a port-by-port basis from the User or Group list on the Sidebar of the User Management page.

Assigning Device Permissions From the User's Notebook

To assign a device permissions to a user from the User’s notebook, do the following:

1. In the Sidebar User list, click the user’s name
   – or –
   In the main panel, select the user’s name.
2. Click Modify.
3. In the User notebook that comes up, select the Devices tab. A screen, similar to the one below, appears:
4. Make your permission settings for each port according to the information provided below:

Name: Each port accessible to the user is listed under the *Names* column.

Access: The *Access* column is where device access rights are set. Click the icon in the row that corresponds to the port you want to configure to cycle through the choices. The meanings of the icons are described in the table, below:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Access</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Full Access</td>
<td>The user can view the remote screen and can perform operations on the remote server from his keyboard and monitor.</td>
</tr>
<tr>
<td></td>
<td>View Only</td>
<td>The user can only view the remote screen; he cannot perform any operations on it.</td>
</tr>
<tr>
<td></td>
<td>No Access</td>
<td>No access rights - the Port will not show up on the User’s list on the Main Screen.</td>
</tr>
</tbody>
</table>

USB: The *USB* column is where USB Virtual Media device access rights are listed. This entry does not appear for switches that do not support the USB Virtual Media function. Click the icon in the row that corresponds to the port you want to configure to cycle through the choices. *Full Access* means that the User can mount, read, and write the virtual media; *View Only* means that the user can only read already mounted virtual media data.

Config: The *Config* column is where a user’s permission to make changes to a port’s configuration settings are permitted/restricted. Click the icon in the row that corresponds to the port you want to configure to cycle through the choices. A check mark ( √ ) indicates that the user has permission to make changes to the port’s configuration settings; an X means that the user is denied permission to make configuration changes.

PON: The PON column permits/restricts the configuration and power operation of ports that have Power Over the Net™ devices connected to them. A check mark ( √ ) indicates that the user has permission; an X means that the user does not have permission.
5. When you have finished making your choices, click **Save**.

6. In the confirmation popup that appears, click **OK**.

**Note:** In any of the columns, you can use Shift-Click or Ctrl-Click to select a group of ports to configure. Clicking to cycle through the choices on any one of the selected ports causes all of them to cycle in unison.

### Filters

There are five filters at the top of the columns that allow you to expand or limit the scope of the ports that are displayed in the *Name* column, as described in the following table:

<table>
<thead>
<tr>
<th>Filter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>To filter on the port name, key in the name then press <strong>Enter</strong>. Only the ports whose names correspond to what you have keyed in appear in the list. Wildcards (?) for single characters; * for multiple characters) and the keyword <strong>or</strong> are supported. E.g., h*ds would return hands and hoods; h?nd would return hand and hind, but not hard; h*rs or h*ks would return hands and hooks.</td>
</tr>
<tr>
<td>Access</td>
<td>All ports appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Full Access Only ports configured as Full Access ports appear in the list.</td>
</tr>
<tr>
<td></td>
<td>View Only Only ports configured as View Only ports appear in the list.</td>
</tr>
<tr>
<td></td>
<td>No Access Only ports configured as No Access ports appear in the list.</td>
</tr>
<tr>
<td>USB</td>
<td>All ports appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Full Access Only ports configured as Full Access USB ports appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Read Only Only ports configured as Read Only USB ports appear in the list.</td>
</tr>
<tr>
<td></td>
<td>No Access Only ports configured as No Access USB ports appear in the list.</td>
</tr>
<tr>
<td>Config</td>
<td>All ports appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Permitted Only ports configured as Permitted appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Restricted Only ports configured as Restricted appear in the list.</td>
</tr>
<tr>
<td>PON</td>
<td>All ports appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Permitted Only ports configured as Permitted appear in the list.</td>
</tr>
<tr>
<td></td>
<td>Restricted Only ports configured as Restricted appear in the list.</td>
</tr>
</tbody>
</table>
Assigning Device Permissions From the Groups' Notebook

To assign a device permissions to a Group of users, do the following:

1. In the Sidebar Groups list, click the group’s name
   – or –
   In the main panel, select the group’s name.

2. Click Modify.

3. In the Groups notebook that comes up, select the Devices tab.

4. The screen that comes up is the same one that appears in the User’s notebook. The only difference is that whatever settings you make apply to all members of the group instead of just one individual member.

   Make your device assignments according to the information described under Assigning Device Permissions From the User’s Notebook, page 151.
Chapter 8

Device Management

KVM Devices

Device Information
The Device Management page opens with the top level KVM over IP switch selected in the Sidebar and the Device Information item selected on the menu bar:

Browser GUI

AP GUI
General
The General section of the Device Information page displays the name of the selected device, its firmware version, the FPGA (Field-Programmable-Gate-Array) and information about its network configuration.

Note: The AP GUI version presents the same information as the Browser version. Scroll through the list to see the additional entries.

Environment
The lower panel presents information concerning the device’s environment, as described in the table, below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power Supply Detection</td>
<td>The icons for Power Supply 1 and Power Supply 2 display in gray when there is no power to the power supply – they display in blue when power is present. When this function is enabled (there is a check in the checkbox), if there is only one source of power, the switch will beep constantly to warn you of the problem. If you are at the Local Console you will see a message asking you to confirm that your intention is to only have one power source. If your intention is to only have one source of power, there are two ways to stop the beeping: 1) You can disable power supply warnings by unchecking the checkbox. Do this if you want to disable this function on a permanent basis. Or, 2) you can confirm your intention in the dialog box. Do this if you only want to disable the warning temporarily. With this method, the warning function will be back in effect after the next system reset. The default for this function is enabled.</td>
</tr>
<tr>
<td>Fan Warning Message</td>
<td>Place a check in the checkbox to enable a fan warning message. If this function is enabled, when any fan stops spinning the system records the event in the system log. If it is not enabled, the event will not be recorded. <strong>Note:</strong> The warning doesn’t necessarily mean that the fan has failed, since the fan will stop spinning (as desired) when the temperature drops below its lower setting. The default for this function is enabled.</td>
</tr>
<tr>
<td>Fan Speed</td>
<td>Fan speeds are indicated here. See Fan Location and Speed Information, page 279.</td>
</tr>
</tbody>
</table>
Operating Mode

The Operating Mode page is used to set working parameters, as described below:

- If *Force all to grayscale* is enabled, the remote displays of all devices connected to the KVM over IP switch are changed to grayscale. This can speed up I/O transfer in low bandwidth situations.

- If *Enable Client AP Device List* is enabled, the switch appears in the Server List when using the WinClient or Java Client AP (see *Windows Client AP Login*, page 47, and *Java Client AP Login*, page 51). If this option is not enabled, the switch can still be connected to, but its name will not appear in the Server List.
When the Enable Adapter ID function is enabled (the default) the switch stores adapter cable information for each of its ports, so that when you move a KVM Adapter Cable from one port to another, it remembers the adapter cable’s port properties information at the new location (see The Adapter ID Function, page 36).

If Enable First Logon Transfer is enabled, only the first user on a bus can switch ports. Other users on the bus cannot switch ports unless there is a bus that is already connected to the port they would like to access, or there is a free bus available. (For details regarding users and buses, see Users and Buses, page 221.)

For the Keyboard/Mouse Broadcast setting, drop down the list to make your choice.
- If you enable Keyboard Broadcast, your keystrokes will be duplicated on all the attached servers that currently appear in the Sidebar.
- If you enable Mouse Broadcast, your mouse movements and clicks will be duplicated on all the attached servers that currently appear in the Sidebar.

**Note:**
1. On a KVM switch that is cascaded from the KVM over IP switch, only one port can perform a Keyboard/Mouse broadcast at a time.
2. For Mouse Broadcast, you and all the servers must be running the same OS; all the monitors must have the same resolution; and all the screens must have an identical layout.

The Console Keyboard Language setting lets you specify which keyboard mapping is being used by the Local Console keyboard. Drop down the list to make your choice.
Network

The Network page is used to specify the network environment.

Each of the elements on this page is described in the sections that follow.
IP Installer

The IP Installer is an external Windows-based utility for assigning IP addresses to the KVM over IP switch.

Click one of the radio buttons to select Enable, View Only, or Disable for the IP Installer utility. See IP Installer, page 256, for IP Installer details.

Note: 1. If you select View Only, you will be able to see the KVM over IP switch in the IP Installer’s Device List, but you will not be able to change the IP address.

2. For security, we strongly recommend that you set this to View Only or Disable after each use.

Service Ports

As a security measure, if a firewall is being used, the Administrator can specify the port numbers that the firewall will allow. If a port other than the default is used, users must specify the port number as part of the IP address when they log in. If an invalid port number (or no port number) is specified, the KVM over IP switch will not be found. An explanation of the fields is given in the table below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program</td>
<td>This is the port number for connecting with the WinClient ActiveX Viewer, WinClient AP, Java Client Viewer, Java Client AP, or via Virtual Media. The default is 9000.</td>
</tr>
<tr>
<td>HTTP</td>
<td>The port number for a browser login. The default is 80.</td>
</tr>
<tr>
<td>HTTPS</td>
<td>The port number for a secure browser login. The default is 443.</td>
</tr>
<tr>
<td>SSH</td>
<td>The port for SSH access. The default is 22.</td>
</tr>
<tr>
<td>Telnet</td>
<td>The port for Telnet access. The default is 23.</td>
</tr>
</tbody>
</table>

Note: 1. Valid entries for all of the Service Ports are from 1–65535.

2. Service ports cannot have the same value. You must set a different value for each one.

3. If there is no firewall (on an Intranet, for example), it doesn’t matter what these numbers are set to, since they have no effect.
NIC Settings

- Redundant NIC
  The KVM over IP switch is designed with two network interfaces. If Redundant NIC is enabled (the default), both interfaces make use of the IP address of Network Adapter 1.

  Under this configuration, the second interface is usually inactive. If there is a network failure on the first interface, the switch automatically switches to the second interface.

- Redundant NIC Enabled – Single IP Address for Both Interfaces
  To enable the Redundant NIC function, do the following:
  1. Click to put a check in the Redundant NIC checkbox.
  2. Network Adapter 1 is selected in the network adapter listbox, and the listbox is disabled – you cannot configure Network Adapter 2.
  3. Configure the IP and DNS server addresses for Network Adapter 1 (see the sections below).

- Redundant NIC Not Enabled – Two IP Addresses
  If you choose not to enable the Redundant NIC function, the two NICs can be configured with separate interfaces. Users can log into the KVM over IP switch with either IP address. To set up the switch with this configuration, do the following:
  1. If there is a check in the Redundant NIC checkbox, click to remove it.
  2. In the network adapter listbox; select Network Adapter 1.
  3. Configure the IP and DNS server addresses for Network Adapter 1 (see the sections below).
  4. Drop down the network adapter listbox; select Network Adapter 2.
  5. Configure the IP and DNS server addresses for Network Adapter 2.
IPv4 Settings
- IP Address:
  IPv4 is the traditional method of specifying IP addresses. The KVM over IP switch can either have its IP address assigned dynamically (DHCP), or it can be given a fixed IP address.
  - For dynamic IP address assignment, select the Obtain IP address automatically radio button. (This is the default setting.)
  - To specify a fixed IP address, select the Set IP address manually radio button and fill in the fields with values appropriate for your network.

  **Note:**
  1. If you choose Obtain IP address automatically, when the switch starts up it waits to get its IP address from the DHCP server. If it hasn’t obtained the address after one minute, it automatically reverts to its factory default IP address (192.168.0.60.).
  2. If the switch is on a network that uses DHCP to assign network addresses, and you need to ascertain its IP address, see IP Address Determination, page 256, for information.

- DNS Server
  - For automatic DNS Server address assignment, select the Obtain DNS Server address automatically radio button.
  - To specify the DNS Server address manually, select the Set DNS server address manually radio button, and fill in the addresses for the Preferred and Alternate DNS servers with values appropriate for your network.

  **Note:** Specifying the Alternate DNS Server address is optional.
IPv6 Settings

IP Address:
IPv6 is the new (128-bit) format for specifying IP addresses. (See IPv6, page 258 for further information.) The KVM over IP switch can either have its IPv6 address assigned dynamically (DHCP), or it can be given a fixed IP address.

- For dynamic IP address assignment, select the Obtain IP address automatically radio button. (This is the default setting.)
- To specify a fixed IP address, select the Set IP address manually radio button and fill in the fields with values appropriate for your network.

DNS Server

- For automatic DNS Server address assignment, select the Obtain DNS Server address automatically radio button.
- To specify the DNS Server address manually, select the Set DNS server address manually radio button, and fill in the addresses for the Preferred and Alternate DNS servers with values appropriate for your network.

Note: Specifying the Alternate DNS Server address is optional.

Network Transfer Rate

This setting allows you to tailor the size of the data transfer stream to match network traffic conditions by setting the rate at which the KVM over IP switch transfers data between itself and the client computers. The range is from 4–99999 Kilobytes per second (KBps).

Finishing Up

After making any network changes, be sure Reset on exit on the Device Management → System Operation page (see Reset on exit:, page 208) has been enabled (there is a check in the checkbox), before logging out. This allows network changes to take effect without having to power the switch off and on.
ANMS
The ANMS (Advanced Network Management Settings) page is used to set up login authentication and authorization management from external sources. It is organized as a notebook with two tabs – each with a series of related panels, as described, below:

Event Destination

- **SMTP Settings**
  
  To have the KVM over IP switch email reports from the SMTP server to you, do the following:

  1. Enable the *Enable report from the following SMTP server*, and key in either the IPv4 address, IPv6 address, or domain name of the SMTP server.

  2. If your server requires a secure SSL connection, put a check in the *My server requires secure connection (SSL)* checkbox.
3. If your server requires authentication, put a check in the *My server requires authentication* checkbox, and key in the appropriate account information in the *Account Name* and *Password* fields.

4. Key in the email address of where the report is being sent from in the *From* field.

**Note:**

1. Only one email address is allowed in the *From* field, and it cannot exceed 64 Bytes.
2. 1 Byte = 1 English alphanumeric character.

5. Key in the email address (addresses) of where you want the SMTP reports sent to in the *To* field.

**Note:** If you are sending the report to more than one email address, separate the addresses with a semicolon. The total cannot exceed 256 Bytes.

- **Log Server**
  
  Important transactions that occur on the KVM over IP switch, such as logins and internal status messages, are kept in an automatically generated log file.
  
  - Specify the MAC address of the computer that the Log Server runs on in the *MAC address* field.
  - Specify the port used by the computer that the Log Server runs on to listen for log details in the *Port* field. The valid port range is 1–65535. The default port number is 9001.

**Note:** The port number must different than the one used for the *Program* port (see *Program*, page 160).

See Chapter 13, *The Log Server*, for details on setting up the log server. The Log File is discussed on page 193.
SNMP Trap
To be notified of SNMP trap events, do the following:
1. Check Enable SNMP Agent.
2. Key in either the IPv4 address, IPv6 address, or domain name of the computer to be notified of SNMP trap events.
3. Key in the port number. The valid port range is 1–65535.

Note: The logs that are notified of SNMP trap events are configured on the Notification Settings page under the Log tab. See Log Notification Settings, page 196 for details.

Syslog Server
To record all the events that take place on KVM over IP switches and write them to a Syslog server, do the following:
1. Check Enable.
2. Key in either the IPv4 address, IPv6 address, or domain name of the Syslog server.
3. Key in the port number. The valid port range is 1-65535.
Authentication

- Disable Local Authentication
  Selecting this option disables login authentication on the KVM over IP switch. The switch can only be accessed using LDAP, LDAPS, MS Active Directory, RADIUS or CC Management authentication.

- RADIUS Settings
  To allow authentication and authorization for the KVM over IP switch through a RADIUS server, do the following:
  1. Check Enable.
  2. Select Preferred or Alternate RADIUS server.
  3. Fill in the IP addresses and service port numbers for the Preferred and Alternate RADIUS servers. You can use the IPv4 address, the IPv6 address or the domain name in the IP fields.
  4. In the Timeout field, set the time in seconds that the KVM over IP switch waits for a RADIUS server reply before it times out.
  5. In the Retries field, set the number of allowed RADIUS retries.
6. In the *Shared Secret* field, key in the character string that you want to use for authentication between the KVM over IP switch and the RADIUS Server. A minimum of 6 characters is required.

7. On the RADIUS server, Users can be authenticated with any of the following methods:
   * Set the entry for the user as `su/xxxx`
     Where `xxxx` represents the Username given to the user when the account was created on the KVM over IP switch.
   * Use the same Username on both the RADIUS server and the KVM over IP switch.
   * Use the same Group name on both the RADIUS server and the KVM over IP switch.
   * Use the same Username/Group name on both the RADIUS server and the KVM over IP switch.

   In each case, the user’s access rights are the ones assigned that were assigned when the User of Group was created on the KVM over IP switch. (See *Adding Users*, page 139.)

- **LDAP / LDAPS Authentication and Authorization Settings**

To allow authentication and authorization for the KVM over IP switch via LDAP / LDAPS, refer to the information in the table, below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable</td>
<td>Put a check in the <em>Enable</em> checkbox to allow LDAP / LDAPS authentication and authorization.</td>
</tr>
<tr>
<td>Type</td>
<td>Click a radio button to specify whether to use LDAP or LDAPS.</td>
</tr>
</tbody>
</table>
| LDAP Server IP and Port | Select Preferred or Alternate LDAP Server and fill in the IP address and port number for the LDAP or LDAPS server.  
  * You can use the IPv4 address, the IPv6 address or the domain name in the *LDAP Server* field.  
  * For LDAP, the default port number is 389; for LDAPS, the default port number is 636. |
| Admin DN              | Consult the LDAP / LDAPS administrator to ascertain the appropriate entry for this field. For example, the entry might look like this:  
  `ou=kn8132,dc=aten,dc=com` |
| Admin Name            | Key in the LDAP administrator’s username.                              |
| Password              | Key in the LDAP administrator’s password.                              |
### Chapter 8. Device Management

<table>
<thead>
<tr>
<th>Item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Search DN</td>
<td>Set the distinguished name of the search base. This is the domain name where the search starts for user names.</td>
</tr>
<tr>
<td>Timeout</td>
<td>Set the time in seconds that the KVM over IP switch waits for an LDAP or LDAPS server reply before it times out.</td>
</tr>
</tbody>
</table>
On the LDAP / LDAPS server, Users can be authenticated with any of the following methods:

- With MS Active Directory schema.
- Without schema – Only the Usernames used on the KVM over IP switch are matched to the names on the LDAP / LDAPS server. User privileges are the same as the ones configured on the switch.
- Without schema – Only Groups in AD are matched. User privileges are the ones configured for the groups he belongs to on the switch.
- Without schema – Usernames and Groups in AD are matched. User privileges are the ones configured for the User and the Groups he belongs to on the switch.

**Note:** For more information on configuring LDAP, you can download the full LDAP instructional manual from our website.

---

**CC Management Settings**

To allow authorization for the KVM over IP switch through a CC (Control Center) server, check *Enable* and fill in the CC Server’s IP address and Service port in the appropriate fields. You can use the IPv4 address, the IPv6 address or the domain name in the *CC Server IP* field.

**Note:** If this function is enabled, PON devices do not appear in the Sidebar, even if they are configured on the switch. This is because they are managed via the CC server.
To set SNMP Agent, do the following:

1. Check **Enable**.

2. Click **Add**. A window appears:

3. Select the Version.

4. Key in the Community Name.

5. Key in NMS IP/Host Name.

6. Select the Access Type and click **Save**.
OOBC

In case the KVM over IP switch cannot be accessed with the usual LAN-based methods, it can be accessed via the switch’s modem port. To enable support for PPP (modem) operation, click to put a checkmark in the Enable Out of Band Access checkbox.

Note: See PPP Modem Operation, page 263, for PPP setup and operation.

When you enable Out of Band Access, the Enable Dial Back, and Enable Dial Out functions become available, as described in the sections that follow.
Enable Dial Back
As an added security feature, if this function is enabled, the switch disconnects
the calls that dial in to it, and dials back to one of the entries specified in the
table below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Fixed Number Dial Back</td>
<td></td>
</tr>
<tr>
<td></td>
<td>If <em>Fixed Number Dial Back</em> is enabled, when there is an incoming call, the KVM over IP switch hangs up the modem and dials back to the modem whose phone number is specified in the Phone Number field. Key the phone number of the modem that you want the KVM over IP switch to dial back to in the Phone Number field.</td>
</tr>
</tbody>
</table>

| Enable Flexible Dial Back |
|                          | If *Flexible Dial Back* is enabled, the modem that the KVM over IP switch dials back to doesn’t have to be fixed. It can dial back to any modem that is convenient for the user, as follows: 1. Key the password that the users must specify in the Password field. 2. When connecting to the KVM over IP switch’s modem, users specify the phone number of the modem that they want the KVM over IP switch to dial back to as their Username, and specify the password set in the Password field for their password. |

Enable Dial Out
For the dial out function, you must establish an account with an Internet Service Provider, and use a modem to dial up to your ISP account. An explanation of the Enable Dial Out items is given in the table below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISP Settings</td>
<td>Specify the telephone number, account name (username), and password that you use to connect to your ISP.</td>
</tr>
</tbody>
</table>
| Dial Out Schedule | This entry sets up the times you want the KVM over IP switch to dial out over the ISP connection.  
  - *Every* provides a listing of fixed times from every hour to every four hours.  
  - If you select *Every two hours* (for example), the KVM over IP switch will start dialing out every two hours beginning at 00:00.  
  - If you don't want the KVM over IP switch to dial out on a fixed schedule, select *Never* from the list.  
  - *Daily* will dial out once a day at a specified time. Use the hh:mm format to specify the time.  
  - *PPP online time* specifies how long you want the ISP connection to last before terminating the session and hanging up the modem. A setting of zero means it is always on line. |
When you have finished making your settings on this page, click **Save**.

<table>
<thead>
<tr>
<th>Item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Emergency Dial Out</td>
<td>If the KVM over IP switch gets disconnected from the network, or the network goes down, this function puts the switch on line via the ISP dial up connection.</td>
</tr>
<tr>
<td></td>
<td>- If you choose <em>PPP stays online until network recovery</em>, the PPP connection to the ISP will last until the network comes back up or the switch reconnects to it.</td>
</tr>
<tr>
<td></td>
<td>- If you choose <em>PPP online time</em>, the connection to the ISP will terminate after the amount of time that you specify is up. A setting of zero means it is always on line.</td>
</tr>
<tr>
<td>Dial Out Mail Configuration</td>
<td>This section provides email notification of problems that occur on the devices connected to the KVM over IP switch’s ports (see <em>SMTP Settings</em>, page 164).</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> This email notification differs from the one configured under <em>SMTP Settings</em>, page 164, in that it uses the ISP mail server rather than the internal company’s mail server.</td>
</tr>
<tr>
<td></td>
<td>- Key in the IPv4 address, IPv6 address, or domain name of your SMTP server in the SMTP Server IP Address field.</td>
</tr>
<tr>
<td></td>
<td>- Key in the email address of the person responsible for the SMTP server (or some other equally responsible administrator), in the Email From field.</td>
</tr>
<tr>
<td></td>
<td>- Key in the email address (addresses) of where you want the report sent to in the To field. If you are sending the report to more than one email address, separate the addresses with a comma or a semicolon.</td>
</tr>
<tr>
<td></td>
<td>- If your server requires a secure SSL connection, put a check in the <em>SMTP server requires secure connection (SSL)</em> checkbox.</td>
</tr>
<tr>
<td></td>
<td>- If your server requires authentication, put a check in the <em>SMTP server requires authentication</em> checkbox, then key in the appropriate account name and password in the fields, below.</td>
</tr>
</tbody>
</table>
Security

The Security page is divided into 7 main panels, as described in the sections that follow.

Login Failures

For increased security, the Login Failures section allows administrators to set policies governing what happens when a user fails to log in successfully.

To set the Login Failures policy, check the Enable checkbox (the default is for Login Failures to be enabled). The meanings of the entries are explained in the table below:

<table>
<thead>
<tr>
<th>Entry</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allowed</td>
<td>Sets the number of consecutive failed login attempts that are permitted from a remote computer. The default is 5 times.</td>
</tr>
<tr>
<td>Timeout</td>
<td>Sets the amount of time a remote computer must wait before attempting to login again after it has exceeded the number of allowed failures. The default is 3 minutes.</td>
</tr>
<tr>
<td>Lock Client PC</td>
<td>If this is enabled, after the allowed number of failures have been exceeded, the computer attempting to log in is automatically locked out. No logins from that computer will be accepted. The default is enabled.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> This function relates to the client computer’s IP. If the IP is changed, the computer will no longer be locked out.</td>
</tr>
<tr>
<td>Lock Account</td>
<td>If this is enabled, after the allowed number of failures have been exceeded, the user attempting to log in is automatically locked out. No logins from the username and password that have failed will be accepted. The default is enabled.</td>
</tr>
</tbody>
</table>

**Note:** If Login Failures is not enabled, users can attempt to log in an unlimited number of times with no restrictions. For security purposes, we recommend that you enable this function and enable the lockout policies.
### Filter

- **IP and MAC Filtering**
  
  IP and MAC Filters control access to the KVM over IP switch based on the IP and/or MAC addresses of the client computers attempting to connect. A maximum of 100 IP filters and 100 MAC filters are allowed. If any filters have been configured, they appear in the IP Filter and/or MAC Filter list boxes.

  To enable IP and/or MAC filtering, **Click** to put a check mark in the *IP Filter Enable* and/or *MAC Filter Enable* checkbox.

  - If the include button is checked, all the addresses within the filter range are allowed access; all other addresses are denied access.
  - If the exclude button is checked, all the addresses within the filter range are denied access; all other addresses are allowed access.
Adding Filters

To add an IP filter, do the following:

1. Click Add. A dialog box similar to the one below appears:

   ![IP Filter Dialog Box]

2. Specify whether you are filtering an IPv4 or IPv6 address.

3. Key the address you want to filter in the From: field.
   - To filter a single IP address, click to put a check in the Single IP checkbox.
   - To filter a continuous range of addresses, key in the end number of the range in the To: field.

   **Note:** This description is for the AP GUI. The Browser GUI differs as follows:
   1. It doesn’t offer an IPv4 or IPv6 choice. It only has From and To fields for IPv4 filtering.
   2. It doesn’t have a checkbox to specify a single IP address. To filter a single IPv4 address, key the same address in both the From and To fields.

4. After filling in the address, click OK.

5. Repeat these steps for any additional IP addresses you want to filter.
To add a MAC filter, do the following:

1. Click **Add**. A dialog box similar to the one below appears:

2. Specify the MAC address in the dialog box, then click **OK**.

3. Repeat these steps for any additional MAC addresses you want to filter.

- **IP Filter / MAC Filter Conflict**
  
  If there is a conflict between an IP filter and a MAC filter – in other words, if a computer’s address is allowed by one filter but blocked by the other – then the blocking filter takes precedence (the computer’s access is blocked).

- **Modifying Filters**
  
  To modify a filter, select it in the IP Filter or MAC Filter list boxes and click **Modify**. The Modify dialog box is similar to the Add dialog box. When it comes up, simply delete the old address(es) and replace it with the new one(s).

- **Deleting Filters**
  
  To delete a filter, select it in the IP Filter or MAC Filter list box and click **Delete**.
Login String

The Login String entry field lets the super administrator specify a login string (in addition to the IP address) that users must add to the IP address when they access the KVM over IP switch with a browser.

For example, if 192.168.0.126 were the IP address, and abcdefg were the login string, then the user would have to key in:

192.168.0.126/abcdefg

Note: 1. Users must place a forward slash between the IP address and the string.
2. If no login string is specified here, anyone will be able to access the KVM over IP switch login page using the IP address alone. This makes your installation less secure.

The following characters are allowed in the string:
0–9 a–z A–Z ~ ! @ $ & * ( ) _ - = + [ ] .

The following characters are not allowed:
% ^ " : / ? # \ { } ; ’ < > [Space]
Compound characters (É Ç ñ ... etc.)

For security purposes, we recommend that you change this string occasionally.
Account Policy
In the Account Policy section, system administrators can set policies governing usernames and passwords.

The meanings of the Account Policy entries are explained in the table below:

<table>
<thead>
<tr>
<th>Entry</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Username Length</td>
<td>Sets the minimum number of characters required for a username. Acceptable values are from 1–16. The default is 6.</td>
</tr>
<tr>
<td>Minimum Password Length</td>
<td>Sets the minimum number of characters required for a password. Acceptable values are from 0–16. A setting of 0 means that no password is required. Users can login with only a Username. The default is 6.</td>
</tr>
</tbody>
</table>
| Password Must Contain At Least| Checking any of these items requires users to include at least one uppercase letter, one lowercase letter or one number in their password.  
**Note:** This policy only affects user accounts created after this policy has been enabled, and password changes to existing user accounts. Users accounts created before this policy was enabled, and there is no change to the existing passwords, are not affected. |
| Disable Duplicate Login       | Check this to prevent users from logging in with the same account at the same time. |
Encryption

These flexible encryption alternatives for keyboard/mouse, video, and virtual media data let you choose any combination of DES; 3DES; AES; RC4; or a Random cycle of any or all of them.

Enabling encryption affects system performance – no encryption offers the best performance; the greater the encryption the greater the adverse effect. If you enable encryption, the performance considerations are as follows:

- RC4 offers the least impact on performance; DES is next; then 3DES or AES
- The RC4 + DES combination offers the least impact of any combination
An explanation of the Mode items is given in the table, below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable ICMP</td>
<td>If ICMP is enabled, the KVM over IP switch can be pinged. If it is not enabled, the device cannot be pinged. The default is Enabled.</td>
</tr>
<tr>
<td>Enable FIPS</td>
<td>Enables the FIPS security standard.</td>
</tr>
<tr>
<td>Enable Multiuser Operation</td>
<td>Enabling Multiuser operation permits up to 32 users to log in at the same time to share the remote bus. If not enabled, only one user can log in at a time. The default is Enabled.</td>
</tr>
<tr>
<td>Enable Virtual Media Write Operation</td>
<td>Enabling Virtual Media Write Operation allows redirected virtual media devices on a user’s system to send data to a remote server, as well as being able to have data from the remote server written to them.</td>
</tr>
<tr>
<td>Enable Local Virtual Media</td>
<td>Enabling Local Virtual Media allows USB storage peripherals (CD/DVD, HD, flash drives, etc.) connected to the KVM over IP switch to appear and act as if it were installed on a remote system.</td>
</tr>
<tr>
<td>Browser Service</td>
<td>Enabling Browser Service allows the administrator to restrict browser access to the KVM over IP switch. After checking Browser Service, drop down the listbox to select the degree of restriction: Disable Browser: means no browser access is permitted. Disable HTTP: means browser access is permitted, but users must access the switch with an HTTPS URL. Disable HTTPS: means browser access is permitted, but users must access the switch with an HTTP URL.</td>
</tr>
<tr>
<td>Disable Authentication</td>
<td>If Disable Authentication is checked, no authentication procedures are used to check users attempting to log in. Users gain Administrator access to the KVM over IP switch simply by entering combination of username and password. Note: Enabling this setting creates an extremely dangerous result as far as security goes, and should only be used under very special circumstances.</td>
</tr>
</tbody>
</table>
Private Certificate

When logging in over a secure (SSL) connection, a signed certificate is used to verify that the user is logging in to the intended site. For enhanced security, the Private Certificate section allows you to use your own private encryption key and signed certificate, rather than the default ATEN certificate.

There are two methods for establishing your private certificate: generating a self-signed certificate; and importing a third-party certificate authority (CA) signed certificate.

- Generating a Self-Signed Certificate
  If you wish to create your own self-signed certificate, a free utility – openssl.exe – is available for download over the web. See Self-Signed Private Certificates, page 278 for details about using OpenSSL to generate your own private key and SSL certificate.

- Obtaining a CA Signed SSL Server Certificate
  For the greatest security, we recommend using a third party certificate authority (CA) signed certificate. To obtain a third party signed certificate, go to a CA (Certificate Authority) website to apply for an SSL certificate. After the CA sends you the certificate and private encryption key, save them to a convenient location on your computer.

- Importing the Private Certificate
  To import the private certificate, do the following:
  1. Click Browse to the right of Private Key; browse to where your private encryption key file is located; and select it.
  2. Click Browse to the right of Certificate; browse to where your certificate file is located; and select it.
  3. Click Upload to complete the procedure.

Note: 1. Clicking Restore Default returns the device to using the default ATEN certificate.

  2. Both the private encryption key and the signed certificate must be imported at the same time.
Certificate Signing Request
The Certificate Signing Request (CSR) section provides an automated way of obtaining and installing a CA signed SSL server certificate.

To perform this operation do the following:

1. Click **Create CSR**. The following dialog box appears:

2. Fill in the form – with entries that are valid for your site – according to the example information in the following table:

<table>
<thead>
<tr>
<th>Information</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Country (2 letter code)</td>
<td>TW</td>
</tr>
<tr>
<td>State or Province</td>
<td>Taiwan</td>
</tr>
<tr>
<td>Locality</td>
<td>Taipei</td>
</tr>
<tr>
<td>Organization</td>
<td>Your Company, Ltd.</td>
</tr>
<tr>
<td>Unit</td>
<td>Techdoc Department</td>
</tr>
<tr>
<td>Common Name</td>
<td>mycompany.com</td>
</tr>
<tr>
<td><strong>Note</strong>: This must be the exact domain name of the site that you want the certificate to be valid for. If the site’s domain name is <a href="http://www.mycompany.com">www.mycompany.com</a>, and you only specify mycompany.com, the certificate will not be valid.</td>
<td></td>
</tr>
<tr>
<td>Email Address</td>
<td><a href="mailto:administrator@yourcompany.com">administrator@yourcompany.com</a></td>
</tr>
</tbody>
</table>
Chapter 8. Device Management

3. After filling in the form (all fields are required), click Create. A self-signed certificate based on the information you just provided is now stored on the KVM over IP switch.

4. Click Get CSR, and save the certificate file (csr.cer) to a convenient location on your computer. This is the file that you give to the third party CA to apply for their signed SSL certificate.

5. After the CA sends you the certificate, save it to a convenient location on your computer. Click Browse to locate the file; then click Upload to store it on the KVM over IP switch.

**Note:** When you upload the file, the KVM over IP switch checks the file to make sure the specified information still matches. If it does, the file is accepted; if not, it is rejected.

If you want to remove the certificate (to replace it with a new one because of a domain name change, for example), simply click Remove CSR.
**Date/Time**

The Date/Time dialog page sets the KVM over IP switch time parameters:

Set the parameters according to the information below.

**Time Zone**

- To establish the time zone that the KVM over IP switch is located in, drop down the Time Zone list and choose the city that most closely corresponds to where it is at.
- If your country or region employs Daylight Saving Time (Summer Time), check the corresponding checkbox.
Date

- Select the month from the drop down listbox.
- Click < or > to move backward or forward by one year increments.
- In the calendar, click on the day.
- To set the time, use the 24 hour HH:MM:SS format.
- Click Set to save your settings.

Network Time

To have the time automatically synchronized to a network time server, do the following:

1. Check the Enable auto adjustment checkbox.
2. Drop down the time server list to select your preferred time server
   - or –
     Check the Preferred custom server IP checkbox, and key in either the IPv4 address, IPv6 address, or domain name of the time server of your choice.
3. If you want to configure an alternate time server, check the Alternate time server checkbox, and repeat step 2 for the alternate time server entries.
4. Key in your choice for the number of days between synchronization procedures.
5. If you want to synchronize immediately, click Adjust Time Now.
PON Devices

Configuration Page
When a PON device is selected in the Sidebar, its Configuration page comes up:

Browser GU

![Browser GU screenshot]

AP GUI

![AP GUI screenshot]
Outlet Configuration

The outlet configuration settings that can be made on this page are the same ones described under Power Management, in the table on page 134.

- Click on a setting to drop down the list of choices.
- To give more than one outlet the same setting at the same time, click to put a check mark in front of the outlets you want to configure. When you change the setting for any one of the outlets, each of the selected outlets will get the new setting.
- To change the setting for all of the outlets at the same time, click to put a check mark in front of the PON’s name. All of the outlets are selected. When you change the setting for any one of the outlets, all of the outlets will get the new setting.
Blade Servers

Configuration Page
For Super Administrators, when a Blade Server is selected in the Sidebar, its Configuration page comes up:

Browser GUI

AP GUI
Blade Server Setup

Adding a Blade Server

To configure a new Blade server, do the following:

1. Select its icon in the Sidebar, then click **Add** in the main panel. The **Setup Blade Server** dialog box comes up, with the **Step 1** tab displayed:

![Setup Blade Server dialog box]

2. Fill in the fields according to the information provided in the table, below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Model</td>
<td>Drop down the list to select the blade server chassis model. If your model isn’t included in the list of supported servers, contact your dealer for help.</td>
</tr>
<tr>
<td>Include KVM</td>
<td>This item is for information purposes and can’t be edited. If the server supports a KVM function, this box is checked. Otherwise, it is unchecked.</td>
</tr>
<tr>
<td>Server Name</td>
<td>For convenience, you can give the server a name.</td>
</tr>
<tr>
<td>Server IP</td>
<td>Key in the server’s IP address (IPv4, IPv6, or domain name) used to access the server via a serial connection (Telnet or SSH)</td>
</tr>
<tr>
<td>Service Port</td>
<td>Key in the port number used for serial access.</td>
</tr>
<tr>
<td>User Name</td>
<td>Key in the username required for serial access authentication.</td>
</tr>
<tr>
<td>Password</td>
<td>Key in the password required for serial access authentication.</td>
</tr>
<tr>
<td>Scan Interval</td>
<td>The interval between times that the KVM over IP switch scans the server for information.</td>
</tr>
</tbody>
</table>
3. When you have finished configuring the fields, click **Next** to bring up the dialog box with the **Step 2** tab displayed.

4. The **Step 2** dialog presents a summary of the blade server’s configuration, including the number of blades installed. Click **Save** to add the blades server to the installation.

**Modifying / Deleting a Blade Server**
- To modify a blade server’s configuration, first select it in the Sidebar, then click **Modify**. Make your changes on the **Setup Blade Server** dialog box.
- To remove a blade server, first select it in the Sidebar, then click **Delete**.

**Web Access**
To access the blade server’s Web page, first select it in the Sidebar, then click **Access Web**.

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timeout</td>
<td>The amount of time that the KVM over IP switch waits for a response from the server before it stops scanning for information.</td>
</tr>
<tr>
<td>Web URL</td>
<td>Key in the server’s IP address (IPv4, IPv6, or domain name) used to access the server via a browser.</td>
</tr>
<tr>
<td>Login Name</td>
<td>Key in the username required for browser authentication.</td>
</tr>
<tr>
<td>Login Password</td>
<td>Key in the password required for browser authentication.</td>
</tr>
</tbody>
</table>
Overview

The KVM over IP switch logs all the events that take place on it. To view the contents of the log, click the Log tab. The device’s Log Information page, similar to the one below, appears:

**Browser GUI**

![Browser GUI](image1)

**AP GUI**

![AP GUI](image2)
Log Information

The Log Information page displays events that take place on the KVM over IP switch, and provides a breakdown of the time, the severity, the user, and a description of each one. You can change the sort order of the display by clicking on the column headings.

The log file tracks a maximum of 512 events. When the limit is reached, the oldest events get discarded as new events come in. The purpose of the buttons at the bottom of the page are described in the following table:

<table>
<thead>
<tr>
<th>Button</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pause</td>
<td>Clicking Pause stops the display of new events. When the display is paused the button changes to Resume. Click Resume to start displaying events again.</td>
</tr>
<tr>
<td>Clear Log</td>
<td>Clicking Clear Log clears the log file.</td>
</tr>
<tr>
<td>Export Log</td>
<td>Clicking Export Log lets you save the contents of the log to a file on your computer.</td>
</tr>
<tr>
<td>Filter</td>
<td>Clicking Filter allows you to search for particular events by date or by specific words or strings, as described in the next section.</td>
</tr>
</tbody>
</table>

Filter

Filter lets you narrow the log event display to ones that occurred at specific times; ones containing specific words or strings; or ones involving specific users. When you access this function, the log filter dialog box appears at the bottom of the page:
A description of the filter items is given in the table, below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time</td>
<td>This feature lets you filter for events that occurred at specific times, as follows:</td>
</tr>
<tr>
<td></td>
<td><strong>Today Only:</strong> Only the events for the current day are displayed.</td>
</tr>
<tr>
<td></td>
<td><strong>Start Date/Time:</strong> Filters for events from a specific date and time to the present. Put a check in the checkbox to bring up a calendar. Set the date and time that you want the filtering to start from. All events from the Start date/time to the present are displayed. For the Web Browser interface, after checking Start Date/Time, you have to click inside the text box in order to bring up the calendar. When you have made your calendar choices, click the A icon at the lower right of the calendar panel.</td>
</tr>
<tr>
<td></td>
<td><strong>End Date/Time:</strong> Filters for events from a specific date and time to a specific date and time. First select the Start Date/Time (described above); check End Date/Time to set the ending date and time. For the Web Browser interface, after checking End Date/Time, you have to click inside the text box in order to bring up the calendar. When you have made your calendar choices, click the A icon at the lower right of the calendar panel.</td>
</tr>
<tr>
<td>Information</td>
<td>Filters for a particular word or string. Key the word or string into the Information text box. Only events containing that word or string are displayed. Wildcards (?) for single characters; * for multiple characters) and the keyword or are supported. E.g., h<em>ds would return hands and hoods; h?nd would return hand and hind, but not hard; h</em>ds or h*ks would return hands and hooks.</td>
</tr>
<tr>
<td>User</td>
<td>Filters for specific users. First put a check in the User checkbox; then key in the user’s Username; then click Apply. Only events containing that Username are displayed.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If the User checkbox is not checked here in the Filter panel, the entire User column does not appear in the main panel.</td>
</tr>
<tr>
<td>Severity</td>
<td>Filters based on the severity rating of the event. Least events appear in black; Less events appear in blue; Most events appear in red. First put a check in the Severity checkbox; then check the severity options you want to filter for (you can check more than one item). Only events that match the severity ratings you specified appear in the display.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If the Severity checkbox is not checked here in the Filter panel, the entire Severity column does not appear in the main panel.</td>
</tr>
<tr>
<td>Apply</td>
<td>Click to apply the filter choices.</td>
</tr>
<tr>
<td>Reset</td>
<td>Click this button to clear the entries in the dialog box and start with a clean slate.</td>
</tr>
<tr>
<td>Exit</td>
<td>Click this button to exit the log filter function.</td>
</tr>
</tbody>
</table>
Log Notification Settings

The Notification Settings page lets you decide which events trigger a notification, and how the notification are sent out:

<table>
<thead>
<tr>
<th>Event Type</th>
<th>Method</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Authentication events</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Login</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Login fail</td>
<td></td>
<td></td>
</tr>
<tr>
<td>User added</td>
<td></td>
<td></td>
</tr>
<tr>
<td>IP address blocked</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Login attempt</td>
<td></td>
<td></td>
</tr>
<tr>
<td>KVM session established</td>
<td></td>
<td></td>
</tr>
<tr>
<td>KVM session terminated</td>
<td></td>
<td></td>
</tr>
<tr>
<td>KVM Viewer events</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Virtual media access</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Remote Virtual Media started</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Remote Virtual Media stopped</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Local Virtual Media started</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Local Virtual Media stopped</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Remote Control Device started</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Local Control Device started</td>
<td></td>
<td></td>
</tr>
<tr>
<td>KVM events</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Custom event</td>
<td></td>
<td></td>
</tr>
<tr>
<td>User event</td>
<td></td>
<td></td>
</tr>
<tr>
<td>System event</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Event log</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Notifications can be sent via SNMP trap, SMTP email, written to the SysLog file, or any combination of the three. A check mark (✓) indicates that notification of the event is enabled for the method specified in the column heading; an X indicates that notification is not enabled.

**Note:** In any of the columns, you can use Shift-Click or Ctrl-Click to select a group of events. Clicking to enable/disable any one of them causes all of them to change in unison.
Chapter 10
Maintenance

Overview

The Maintenance function is used to upgrade firmware; backup and restore configuration and account information; ping network devices; and restore default values.

Browser GUI

AP GUI
Main Firmware Upgrade

In addition to upgrading the KVM over IP switch’s main firmware, this function can also be used to upgrade any PON units and Blade Servers deployed on the installation. As new versions of the firmware become available, they can be downloaded from our website. Check the website regularly to find the latest information and packages.

To upgrade the main firmware, do the following:

1. Download the new firmware file (switch, PON or blade server module), to your computer.

2. Log in to the KVM over IP switch; and click the Maintenance tab. The Maintenance tab opens to the Upgrade Main Firmware page:

3. Click Browse; navigate to the directory that the new firmware file is in and select the file.

4. Click Upgrade Firmware to start the upgrade procedure.
   - If you enabled Check Main Firmware Version the current firmware level is compared with that of the upgrade file. If the current version is equal to or higher than the upgrade version, a popup message appears, to inform you of the situation and stops the upgrade procedure.
   - If you didn't enable Check Main Firmware Version, the upgrade file is installed without checking what its level is.
   - As the upgrade proceeds, progress information is shown in the Progress bar.
   - Once the upgrade completes successfully, the switch resets itself.

5. Log in again, and check the firmware version to be sure it is the new one.

**Note:** To recover from a “failed upgrade” situation, see Firmware Upgrade Recovery, page 199.
Firmware Upgrade Recovery

Should the switch’s main firmware upgrade procedure fail, and the switch becomes unusable, the following firmware upgrade recovery procedure will resolve the problem:

1. Power off the switch.
2. Press and hold the Reset Switch in (see Reset Switch, page 12).
3. While holding the Reset Switch in, power the switch back on.

This causes the switch to use the original factory installed main firmware version. Once the switch is operational, you can try upgrading the main firmware again by logging on to the KVM over IP switch via web browser (see Main Firmware Upgrade, page 198).
Upgrade Adapters

The Upgrade Adapters page allows you to view and update KVM adapter firmware and display information. This section refers to the KVM adapter cables that provide the EDID display information to the connected server, which allow its video to be displayed on the local console monitor.

Browser GUI

![Browser GUI Image]

AP GUI

![AP GUI Image]
Upgrade Adapters

The Upgrade Adapters button is used to upgrade the firmware of the KVM Adapter Cables.

To perform the upgrades, do the following:

1. Click the Maintenance tab; select the Upgrade Adapters menu item.

2. Click Adapter Firmware Info to bring up a list of the adapter firmware versions that are stored in the main firmware. If you upgraded the main firmware, it may contain newer versions of the adapter firmware than the versions currently on the adapters.

3. Compare the adapter firmware versions stored in the main firmware with the versions listed in the F/W Version column of the Main Panel. If the versions stored in the firmware are newer than the ones on the adapters, you will probably want to perform the adapter upgrade.

4. In the Name column of the Main Panel, check the ports whose Adapters you want to upgrade.

5. Click Upgrade Adapters to start the upgrade procedure.
   - If you enabled Check Adapter Firmware Version, the current firmware level(s) are compared with that of the upgrade versions. If the current version is equal to, or higher than the upgrade version, a message appears in the adapters Progress column informing you that no upgrade is available and stops the upgrade procedure.
   - If you didn't enable Check Adapter Firmware Version, the upgrade files are installed without checking what their level is.
   - When the procedure completes the new adapter firmware version displays.

Note: 1. The switch may work with older adapter firmware versions, but for optimum compatibility we recommend upgrading your Adapter Cable firmware to that stored with the switch’s Main firmware.

2. You can perform the upgrade procedure anytime you add an Adapter to the installation to make sure it is working with the latest firmware version.

3. To recover from a “failed upgrade” situation, see Adapter Firmware Upgrade Recovery, page 204.
Adapter Firmware Info

The Adapter Firmware Info button provides a list of the Adapter Cable firmware stored on the switch’s Main firmware. You can use this information to compare it to the F/W Version listed for the connected Adapter Cables. For optimum compatibility we recommend upgrading your Adapter Cable’s firmware to match that stored with the switch’s Main firmware.

Browser GUI

![Browser GUI Image]

AP GUI

![AP GUI Image]
Display Information

The Display Information button will query and show the locally connected monitor’s EDID information, as shown here:

```
ID Manifestation Name: V1.22
ID Product Code : 25500
ID Serial Number : T6U7A143304
Monitor Name : AU2102 Serie
Monitor Serial Number : 0A
Preferred Resolution : 1920x1080

Update Adapter Display Info

The Update Adapter Display Info button will query the local monitor’s EDID information and update it on the Adapter Cable. The EDID information tells the server's video card about the hardware of the display it is connected to; in this case the monitor connected to the KVM console.

Use the Display Information button to obtain the local monitor’s Preferred Resolution (optional), and apply it with the Select Preferred Resolution drop down menu, then click Write. If the local console is not connected to a monitor, the default EDID setting is loaded on the adapter cable.
Adapter Firmware Upgrade Recovery

Should the adapter firmware upgrade procedure fail for one of the KVM Adapter Cables and the adapter becomes unusable, the following adapter firmware upgrade recovery procedure will resolve the problem:

1. Unplug the Adapter from the server it is connected to.
2. Slide its Firmware Upgrade Recovery Switch (located next to the Cat 5e connector) to the RECOVER position.
3. Plug the Adapter back into the server.
4. Repeat the Adapter upgrade procedure.

After the Adapter has been successfully upgraded, unplug the Adapter from the server it is connected to; slide the Firmware Upgrade Recovery Switch back to the NORMAL position; and plug the Adapter back in.
Backup/Restore

Selecting the Backup/Restore menu item gives you the ability to back up the switch’s configuration and user profile information:

1. In the Password field, key in a password for the file.

   **Note:**
   1. Setting a password is optional. If you do not set one, the file can be restored without specifying a password.
   2. If you do set a password, make a note of it, since you will need it to be able to restore the file.

2. Click **Backup**.

3. When the browser asks what you want to do with the file, select *Save to disk*; then save it in a convenient location.
**Restore**

To restore a previous backup, do the following:

1. Click **Browse**; navigate to the file and select it.

   **Note:** If you renamed the file, you can leave the new name. There is no need to return it to its original name.

2. If you set a password when you created the file, key it in the *Password* field.

3. Select as many of the options that are presented as you wish to restore.

4. Click **Restore**.

   After the file is restored, a message appears to inform you that the procedure succeeded.
Terminal

Terminal is also available for access to more advanced instructions through a terminal-like interface.

Available commands include:

- **BLADEDEBUG** => Debug blade server.
- **CLS** => Clears the screen.
- **ENABLERC4** => Enable RC4 cipher.
- **ENABLESSLV2** => Enables SSLv2 protocol.
- **ENABLESSLV3** => Enables SSLv3 protocol.
- **GET** => Gets current configuration.
- **HELP** => Provides Help information for commands.
- **LDAPDEBUG** => Debugs ldap communication.
- **NETINFO** => Displays network statistics information.
- **PING** => Displays ping host information.
- **SETLDAPMEMBER** => Sets new value for ldap member.
- **SETLDAPMEMBEROF** => Sets new value for ldap memberof.
- **SETPROMPT** => Sets prompt string.
- **SETSSLCIPHER** => Sets SSL cipher strength.
- **SOCKINFO** => Displays socket connection information.
- **TRACERT** => Displays trace route information.
The Restore Values page lets you restore certain configuration changes that were made to the KVM over IP switch back to their original factory default values.

The functions performed on this page are as follows:

**Clear Port Names:**
Clicking this button removes names that have been assigned to the ports.

**Restore Default Values:**
Clicking this button undoes all Customization page changes that have been made to the KVM over IP switch (except for the Port Names), as well as the Network Transfer Rate (on the Network page), and returns the parameters to the original factory default settings.

**Reset on exit:**
Place a check here and click **Apply** to have the KVM over IP switch reset itself and implement all the new settings when you log out. (Following the reset, wait approximately 30 to 60 seconds before logging back in.)

If you change the switch’s IP Address (see **Network**, page 159), the checkbox is automatically checked and the KVM switch will reset when you log out. If you clear the check mark before logging out, the changed IP settings will be ignored and the original IP address settings will remain in effect.

**Note:** Even though the changed IP settings are ignored, they still remain in the network settings fields. Which means that the next time you open this page the **Reset on exit** checkbox will automatically be enabled, and when the switch resets, the new IP settings that you thought you discarded will become the ones used by the switch. To avoid this problem, you should go back to the network settings page and be sure that the IP settings that appear in the fields are the ones you want to use.
Overview

*Download* is used to download stand-alone AP versions of the Windows Client, the Java Client, and the Log Server:

Click the program you want to download; save it to a convenient location on your hard disk, and run it from there.
Chapter 12
Port Operation

Overview

After you have successfully logged in (see Logging In, page 45), the KVM over IP switch opens to the Port Access tab’s Connections page, with the first KVM over IP switch selected in the sidebar:

Note: 1. The WinClient and Java Client AP programs have a hidden Control Panel at the upper center of the screen that becomes visible when you mouse over it. The Browser version’s Control Panel only appears after you switch to a port. The Control Panel is discussed on page 61.

2. See KVM Devices and Ports – Connections Page, page 103 for details about the Port Access Connections page.
Connecting to a Port

All the devices, ports, and outlets that a user is permitted to access are listed in the Sidebar at the left of the page.

- To connect to a port when a device is selected in the Sidebar, double click its icon in the Sidebar; or double click anywhere on its line entry in the main central panel; or select it in the main panel and click Connect at the bottom right of the page.

- To connect to a port when the port is selected in the Sidebar, click Connect at the right of the Status panel (see Status, page 104).

Once you switch to a port, its screen displays on your monitor, and your keyboard and mouse input affects the remote server:
The Port Toolbar

The KVM over IP switch’s interface provides a toolbar to help you with port switching operations from within the captured port. To bring up the toolbar, tap the GUI Hotkey (Scroll Lock or Ctrl), twice. The toolbar appears at the upper left corner of the screen:

Depending on the settings that were selected for ID Display (see page 119), the Port Number and/or the Port Name display at the right of the toolbar. The meanings of the toolbar icons are given in a table on page 214.

When the toolbar displays mouse and keyboard input has no effect on the server connected to the port. To carry out operations on the server, close the toolbar by clicking its X icon.

To return to the Port Access Connections page, either click the appropriate icon (see The Toolbar Icons, page 214), or tap the GUI hotkey again.

Note: 1. You can adjust the toolbar transparency (see Video Settings, page 75).

2. The toolbar functions and icons are also incorporated in the Control Panel. If you choose to enable them in the Control Panel (see Control Panel Configuration, page 92), you can disable the Toolbar (see User Preferences, page 119 for details). To recall the Port Access Connections page when there is no Toolbar, simply tap the GUI hotkey twice.
The Toolbar Icons
The meanings of the toolbar icons are explained in the table below.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Left Arrow]</td>
<td>Click to skip to the first accessible port on the entire installation, without having to recall the Port Access page.</td>
</tr>
<tr>
<td>![Left Arrow]</td>
<td>Click to skip to the first accessible port previous to the current one, without having to recall the Port Access page.</td>
</tr>
<tr>
<td>![Clockwise Arrow]</td>
<td>Click to begin Auto Scan Mode. The KVM over IP switch automatically switches among the ports that were selected for Auto Scanning with the Filter function (see Filter, page 99). This allows you to monitor their activity without having to switch among them manually.</td>
</tr>
<tr>
<td>![Right Arrow]</td>
<td>Click to skip from the current port to the next accessible one, without having to recall the Port Access page.</td>
</tr>
<tr>
<td>![Middle Arrow]</td>
<td>Click to skip from the current port to the last accessible port on the entire installation, without having to recall the Port Access page.</td>
</tr>
<tr>
<td>![Rectangle with X]</td>
<td>Click to recall the Port Access page.</td>
</tr>
<tr>
<td>![Rectangle]</td>
<td>Click to close the toolbar.</td>
</tr>
<tr>
<td>![Rectangle]</td>
<td>Click to invoke Panel Array Mode (see Panel Array Mode, page 218).</td>
</tr>
</tbody>
</table>
**Toolbar Hotkey Port Switching**

When the toolbar displays, you can use hotkeys to provide KVM focus to a port directly from the keyboard. The KVM over IP switch provides the following hotkey features:

- Going directly to a port by keying in its port number and clicking Enter.
- Auto Scanning
- Skip Mode Switching

The hotkeys are: A and P for Auto Scanning; and the **Arrow Keys** for Skip Mode.

**Note:**

1. In order for hotkey operations to take place, the toolbar must be visible (see *The Port Toolbar*, page 213).
2. To use the keys designated as hotkeys (i.e. A, P, etc.) for normal, non-hotkey purposes, you must first close the toolbar.
3. For issues affecting multiple user operation in Auto Scan Mode, see *Multiuser Operation*, page 220.

**Auto Scanning**

The Scan function automatically switches among all the ports that are accessible to the currently logged on user at regular intervals, so that the user can monitor their activity automatically. Users can also limit the number of ports scanned with the Filter function of the Sidebar. See *KVM Devices and Ports – Connections Page*, page 103, and *Filter*, page 99, for further details.

- Setting the Scan Interval:
  
  The amount of time Auto Scan dwells on each port is set with the *Scan Duration* setting (see *Scan Duration*, page 120).

- Invoking Auto Scan

  To start Auto Scanning, with the toolbar showing, tap the A key. The Auto Scan function cycles through the ports in order – starting from the first port on the installation. An [S] appears in front of the Port ID Display to indicate that the port is being accessed under Auto Scan Mode.
Pausing Auto Scan

While you are in Auto Scan Mode, you can pause the scanning in order to keep the focus on a particular server by pressing P. During the time that Auto Scanning is paused, the S in front of the Port ID blinks On and Off.

_Pausing_ when you want to keep the focus on a particular server can be more convenient than exiting Auto Scan Mode because when you _Resume_ scanning, you start from where you left off. If, on the other hand, you were to exit and then restart Auto Scan Mode, the scanning would start over from the very first server on the installation.

To _Resume_ Auto Scanning after a pause, press any key except [Esc] or the [Spacebar]. Scanning continues from where it left off.

Exiting Auto Scan

While Auto Scan Mode is in effect, ordinary keyboard functions are suspended. You must exit Auto Scan Mode in order to regain normal control of the keyboard. To exit Auto Scan Mode press [Esc] or the [Spacebar]. Auto Scanning stops when you exit Auto Scan Mode.

Skip Mode

Skip Mode allows you to switch ports in order to monitor the servers manually. You can dwell on a particular port for as long or as little as you like - as opposed to Auto Scanning, which automatically switches after a fixed interval. The Skip Mode hotkeys are the four Arrow keys. Their operation is explained in the table below:

<table>
<thead>
<tr>
<th>Arrow</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>←</td>
<td>Skips from the current port to the first accessible port previous to it.</td>
</tr>
<tr>
<td>→</td>
<td>Skips from the current port to the first accessible port that comes after it.</td>
</tr>
<tr>
<td>↑</td>
<td>Skips from the current port to the very first accessible port on the installation.</td>
</tr>
<tr>
<td>↓</td>
<td>Skips from the current port to the very last accessible port on the installation.</td>
</tr>
</tbody>
</table>
Recalling the Port Access Page

To dismiss the toolbar and bring back the Port Access page, do one of the following:

- Tap the GUI Hotkey once.
- From the toolbar, click the icon that recalls the Port Access page (see The Toolbar Icons, page 214).

The toolbar closes, and the Port Access Page appears.

GUI Hotkey Summary Table

The following table presents a summary of the GUI Hotkey actions after you have accessed a port. See User Preferences, page 119 to set the GUI Hotkey.

<table>
<thead>
<tr>
<th>To...</th>
<th>Do This...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open the Toolbar</td>
<td>Click the GUI Hotkey twice</td>
</tr>
<tr>
<td>Open the Port Access Page</td>
<td></td>
</tr>
<tr>
<td>The Toolbar is open</td>
<td>Click the GUI Hotkey once</td>
</tr>
<tr>
<td>The Toolbar is not open</td>
<td>Click the GUI Hotkey three times</td>
</tr>
</tbody>
</table>
Panel Array Mode

Clicking the toolbar's Panel icon invokes Panel Array Mode. Under this mode, the screen divides into a grid of up to 42 panels:

- Each panel represents one of the switch’s ports beginning with Port 1 at the upper left, and going from left to right; top to bottom.
- The number of panels in the array can be selected by clicking the Show More Ports, and Show Fewer Ports symbols on the panel array toolbar (see the following page for an explanation of the panel array toolbar).
- When the Array is first invoked, it scans through each of the ports that were selected for Auto Scanning with the Filter function (see Filter, page 99). As it scans, the border of the panel that has the focus becomes highlighted.
- Only ports that are accessible to the user are displayed. For ports that are not accessible, the panel is blank.
- If the server connected to a port is on line, its screen displays in its panel, otherwise the panel is blank.
- Mousing over a panel displays information about the port (port name, online status, port access status, and resolution).
- You can access a server connected to a port by moving the mouse pointer over its panel and clicking. You switch to the server exactly as if you had selected it from the Port Access page.
Panel Array Toolbar
The panel array toolbar provides shortcut navigation and control of the panel array. The toolbar can be dragged anywhere on the screen. Mousing over an icon brings up a “tooltip” that provides a short description of the icon’s function. The icon functions are described in the table below:

<table>
<thead>

</tbody>
</table>

**Note:** For issues affecting multiple user operation in Panel Array Mode, see *Multiuser Operation*, page 220.
Multiuser Operation

The KVM over IP switch supports multiuser operation. When multiple users simultaneously access the switch from client computers, the rules of precedence that apply are shown in the following table:

<table>
<thead>
<tr>
<th>Operation</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>Each bus is independent. For an explanation of the method by which users are assigned to buses, see the next section, \textit{Users and Buses}. Each user can open his own independent GUI Main Page.</td>
</tr>
<tr>
<td>Auto Scan Mode</td>
<td>If a user has invoked Auto Scan Mode (see page 215), and then another user logs on and gets assigned to the same bus, at first the new user sees the GUI Main Page – but as soon as he accesses any port, he automatically enters Auto Scan Mode (since he is sharing the bus with the original user). Any user on the bus can halt Auto Scan Mode by recalling the GUI Main Page. When this occurs, Auto Scan Mode stops and all the other users on the bus are switched to the port that was being accessed when Auto Scan Mode stopped.</td>
</tr>
<tr>
<td>Panel Array Mode</td>
<td>• If a user has invoked Panel Array Mode (see page 218), and then another user logs on and gets assigned to the same bus at first user, the new user sees the GUI Main Page – but as soon as he accesses any port, he automatically enters Panel Array Mode (since he is sharing the bus with the original user). • Panel Array Mode continues until the original user stops it. (Administrators can override Panel Array Mode, however.) • Only the user who starts Panel Array Mode can use the Skip Mode (see page 216), function. • Only the user who starts Panel Array Mode can switch ports. Other users automatically switch to the ports that the original user selects. However, if one of the other users does not have access rights to the port that the original user switches to, that user will not be able to view the port. • Individual users can increase or decrease the number of panels they wish to view in Panel Array Mode; however, the picture quality may decrease as the number of panels increases.</td>
</tr>
</tbody>
</table>
Users and Buses

- The KN8164V / KN8132V support eight remote buses. The first, ninth, 17th, etc., users are all on the first bus; the second, 10th, 18th, etc., users are all on the second bus; the third, 11th, 19th etc., users are all on the third bus; the fourth, 12th, 20th, etc., users are all on the fourth bus; the fifth, 13th, 21st, etc., users are all on the fifth bus; the sixth, 14th, 22nd, etc., users are all on the sixth bus; the seventh, 15th, 23rd, etc., users are all on the sixth bus; the eighth, 16th, 24th, etc., users are all on the eighth bus.

- The KN4116VA / KN4132VA / KN4164V support four remote buses. The first, fifth, ninth, etc., users are all on the first bus; the second, sixth, 10th, etc., users are all on the second bus; the third, seventh, 11th etc., users are all on the third bus; the fourth, eighth, 12th, etc., users are all on the fourth bus.

- The KN2116VA / KN2132VA support two remote buses. The first, third, fifth, etc., users are all on the first bus; the second, fourth, sixth, etc., users are all on the second bus.

- All KVM over IP switches support independent bus switching. With independent bus switching, if a user switches to a port that is being utilized by someone on a different bus, only the user that switched ports goes to the new port and the new bus – the other users on the original bus remain on the original port and original bus.

**Note:**

1. Independent bus switching does not work when Auto Scan Mode or Panel Array Mode is being used by one of the members of the bus.

2. If *Enable First Rider Transfer* is enabled (see page 158), only the first user on a bus can switch to an un-accessed port. Other users on the bus cannot switch ports unless there is a bus that is already connected to the port they would like to access, or there is a free bus available.

- We recommend that the user who starts Panel Array Mode set it to display at least four panels. Otherwise, it is possible that the other users may only receive part of the picture.
Chapter 13
The Log Server

The Windows-based Log Server is an administrative utility that records all the events that take place on selected KVM over IP switches and writes them to a searchable database. This chapter describes how to install and configure the Log Server.

Installation

1. Log into the KVM over IP switch (see page 45).
2. Click the Download tab and download the Log Server AP program.
3. Go to the location on your hard disk that you downloaded the Log Server program to, and double click its icon (LogSetup.exe) to bring up the Windows Client Connection Screen:

   **Note:** If the browser cannot run the file, save it to disk, instead, and run the file from your disk.

   The Log Server installation screen appears:

   ![Log Server installation screen]

4. Click **Next**. Then follow the on-screen instructions to complete the installation and have the Log Server program icon placed on your desktop.
Starting Up

To start the Log Server, either double click the program icon, or key in the full path to the program on the command line. The first time you run it, a screen similar to the one below appears:

![Log Server screen](image)

Note:
1. The MAC address of the Log Server computer must be specified in the ANMS settings – see Log Server, page 165.
2. The Log Server requires the Microsoft Jet OLEDB 4.0 driver. See The Log Server program does not run., page 253 if the program doesn’t start.

The screen is divided into three components:
- A Menu Bar at the top
- A panel that will contain a list of KVM over IP switches in the middle (see The Log Server Main Screen, page 229).
- A panel that will contain an Events List at the bottom

Each of the components is explained in the sections that follow.
The Menu Bar

The Menu bar consists of four items:

- Configure
- Events
- Options
- Help

These are discussed in the sections that follow.

Note: If the Menu Bar appears to be disabled, click in the List window to enable it.

Configure

The Configure menu contains three items: Add; Edit; and Delete. They are used to add new units to the List; edit the information for units already on the list; or delete units from the list.

- To add a unit to the list, click Add.
- To edit or delete a listed unit, first select the target in the List window, then open this menu and click Edit or Delete.

When you choose Add or Edit, a dialog box, similar to the one below, appears:
A description of the fields is given in the table, below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>This can either be the IP address of the computer the Log Server is running on, or its DNS name.</td>
</tr>
<tr>
<td>Port</td>
<td>The port number that was assigned to the Log Server under Device Management (see Log Server, page 165).</td>
</tr>
<tr>
<td>Description</td>
<td>This field is provided so that you can put in a descriptive reference for the unit to help identify it.</td>
</tr>
<tr>
<td>Limit</td>
<td>This specifies the number of days that an event should be kept in the Log Server’s database. Events that exceed the amount of time specified here can be removed with the Maintenance function (see Maintenance:, page 227).</td>
</tr>
</tbody>
</table>

Fill in or modify the fields, then click **OK** to finish.

**Events**

The Events Menu has two items: **Search** and **Maintenance**.

**Search:**

Search allows you to search for events containing specific words or strings. When you access this function, a screen, similar to the one below, appears:
A description of the items is given in the table, below:

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>New search</td>
<td>This is one of three radio buttons that define the scope of the search. If it is selected, the search is performed on all the events in the database for the selected unit.</td>
</tr>
<tr>
<td>Search last results</td>
<td>This is a secondary search performed on the events that resulted from the previous search.</td>
</tr>
<tr>
<td>Search excluding last results</td>
<td>This is a secondary search performed on all the events in the database for the selected unit excluding the events that resulted from the previous search.</td>
</tr>
<tr>
<td>Server List</td>
<td>KVM over IP switches are listed according to their IP address. Select the unit that you want to perform the search on from this list. You can select more than one unit for the search. If no units are selected, the search is performed on all of them.</td>
</tr>
<tr>
<td>Priority</td>
<td>Sets the level for how detailed the search results display should be. Least is the most general; Most is the most specific. Least results appear in black; Less results appear in blue; Most results appear in red.</td>
</tr>
<tr>
<td>Start Date</td>
<td>Select the date that you want the search to start from. The format follows the YYYY/MM/DD convention, as follows: 2009/11/04</td>
</tr>
<tr>
<td>Start Time</td>
<td>Select the time that you want the search to start from. The format follows the HH:MM:SS convention.</td>
</tr>
<tr>
<td>End Date</td>
<td>Select the date that you want the search to end at.</td>
</tr>
<tr>
<td>End Time</td>
<td>Select the time that you want the search to end at.</td>
</tr>
<tr>
<td>Pattern</td>
<td>Key in the pattern that you are searching for here. The multiple character wildcard (%) is supported. E.g., h%ds would match hands and hoods.</td>
</tr>
<tr>
<td>Results</td>
<td>Lists the events that contained matches for the search.</td>
</tr>
<tr>
<td>Search</td>
<td>Click this button to start the search.</td>
</tr>
<tr>
<td>Print</td>
<td>Click this button to print the search results.</td>
</tr>
<tr>
<td>Export</td>
<td>Click this button to save the search results to file.</td>
</tr>
<tr>
<td>Exit</td>
<td>Click this button to exit the Log Server.</td>
</tr>
</tbody>
</table>

**Maintenance:**

This function allows the administrator to perform manual maintenance of the database, such as erasing specified records before their expiration time is up.
Options

Network Retry allows you to set the number of seconds that the Log Server should wait before attempting to connect if its previous attempt to connect failed. When you click this item, a dialog box, similar to the one below, appears:

Key in the number of seconds, then click OK to finish.

Help

From the Help menu, click Contents to access the online Windows Help file. The help file contains instructions about how to setup, operation and troubleshoot the Log Server.
The Log Server Main Screen

Overview
The Log Server Main Screen is divided into two main panels.

- The upper (List) panel lists all of the units that have been selected for the Log Server to track (see Configure, page 225).
- The lower (Event) panel displays the tick information for the currently selected unit. (If there are more than one unit, the selected unit is the one that is highlighted).
- To select a unit in the list, simply click on it.
The List Panel

The List panel contains six fields:

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recording</td>
<td>Determines whether the Log Server records the ticks for this unit, or not. If the Recording checkbox is checked, the field displays Recording, and the ticks are recorded. If the Recording checkbox is not checked, the field displays Paused, and the ticks are not recorded. <strong>Note:</strong> Even though a unit is not the currently selected one, if its Recording checkbox is checked, the Log Server will still record its ticks.</td>
</tr>
<tr>
<td>Address</td>
<td>This is the IP Address or DNS name that was given to the unit when it was added to the Log Server (see Configure, page 225).</td>
</tr>
<tr>
<td>Port</td>
<td>This is the Access Port number assigned to the unit (see Configure, page 225).</td>
</tr>
</tbody>
</table>
| Connection| * If the Log Server is connected to the unit, this field displays Connected.  
* If the Log Server is not connected, this field displays Waiting. This means that the Log Server's MAC address has not been set properly. It needs to be set on the Device Management Data/Time page (see page 186). |
| Days      | This field displays the number of days that the unit's log events are to be kept in the Log Server's database before expiration (see Configure, page 225). |
| Description | This field displays the descriptive information given for the unit when it was added to the Log Server (see Configure, page 225). |

The Event Panel

The lower panel displays log events for the currently selected unit. Note that if there are more than one units, even though they aren't currently selected, if their Recording checkbox is checked, the Log Server records their log events and keeps them in its database.
Appendix

Safety Instructions

General

- This product is for indoor use only.
- Read all of these instructions. Save them for future reference.
- Follow all warnings and instructions marked on the device.
- Do not place the device on any unstable surface (cart, stand, table, etc.). If the device falls, serious damage will result.
- Do not use the device near water.
- Do not place the device near, or over, radiators or heat registers.
- The device cabinet is provided with slots and openings to allow for adequate ventilation. To ensure reliable operation, and to protect against overheating, these openings must never be blocked or covered.
- The device should never be placed on a soft surface (bed, sofa, rug, etc.) as this will block its ventilation openings. Likewise, the device should not be placed in a built in enclosure unless adequate ventilation has been provided.
- Never spill liquid of any kind on the device.
- Unplug the device from the wall outlet before cleaning. Do not use liquid or aerosol cleaners. Use a damp cloth for cleaning.
- The device should be operated from the type of power source indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.
- To prevent damage to your installation it is important that all devices are properly grounded.
- The device is designed for IT power distribution systems with 230V phase-to-phase voltage.
- The device is equipped with a 3-wire grounding type plug. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not attempt to defeat the purpose of the grounding-type plug. Always follow your local/national wiring codes.
- Do not allow anything to rest on the power cord or cables. Route the power cord and cables so that they cannot be stepped on or tripped over.
If an extension cord is used with this device make sure that the total of the ampere ratings of all products used on this cord does not exceed the extension cord ampere rating. Make sure that the total of all products plugged into the wall outlet does not exceed 15 amperes.

To help protect your system from sudden, transient increases and decreases in electrical power, use a surge suppressor, line conditioner, or un-interruptible power supply (UPS).

Position system cables and power cables carefully; Be sure that nothing rests on any cables.

When connecting or disconnecting power to hot-pluggable power supplies, observe the following guidelines:
- Install the power supply before connecting the power cable to the power supply.
- Unplug the power cable before removing the power supply.
- If the system has multiple sources of power, disconnect power from the system by unplugging all power cables from the power supplies.

Never push objects of any kind into or through cabinet slots. They may touch dangerous voltage points or short out parts resulting in a risk of fire or electrical shock.

Do not attempt to service the device yourself. Refer all servicing to qualified service personnel.

If the following conditions occur, unplug the device from the wall outlet and bring it to qualified service personnel for repair.
- The power cord or plug has become damaged or frayed.
- Liquid has been spilled into the device.
- The device has been exposed to rain or water.
- The device has been dropped, or the cabinet has been damaged.
- The device exhibits a distinct change in performance, indicating a need for service.
- The device does not operate normally when the operating instructions are followed.

Only adjust those controls that are covered in the operating instructions. Improper adjustment of other controls may result in damage that will require extensive work by a qualified technician to repair.

Additional protection to secure and fix the equipment is needed if the equipment is installed by stacking; by locking it to the rack, screwing it to the frame, or other similar methods.
Keep the Cat 5e/6 cable as far away as possible from potential sources of EMI, such as electrical cables, transformers, and light fixtures. Do not tie the cables to electrical conduits or lay the cables on electrical fixtures.

**Rack Mounting**

- Before working on the rack, make sure that the stabilizers are secured to the rack, extended to the floor, and that the full weight of the rack rests on the floor. Install front and side stabilizers on a single rack or front stabilizers for joined multiple racks before working on the rack.
- Always load the rack from the bottom up, and load the heaviest item in the rack first.
- Make sure that the rack is level and stable before extending a device from the rack.
- Use caution when pressing the device rail release latches and sliding a device into or out of a rack; the slide rails can pinch your fingers.
- After a device is inserted into the rack, carefully extend the rail into a locking position, and then slide the device into the rack.
- Do not overload the AC supply branch circuit that provides power to the rack. The total rack load should not exceed 80 percent of the branch circuit rating.
- Make sure that all equipment used on the rack – including power strips and other electrical connectors – is properly grounded.
- Ensure that proper airflow is provided to devices in the rack.
- Ensure that the operating ambient temperature of the rack environment does not exceed the maximum ambient temperature specified for the equipment by the manufacturer.
- Do not step on or stand on any device when servicing other devices in a rack.
Consignes de sécurité

Général

• Ce produit est destiné exclusivement à une utilisation à l’intérieur.
• Veuillez lire la totalité de ces instructions. Conservez-les afin de pouvoir vous y référer ultérieurement.
• Respectez l’ensemble des avertissements et instructions inscrits sur l’appareil.
• Ne placez jamais l’unité sur une surface instable (chariot, pied, table, etc.). Si l’unité venait à tomber, elle serait gravement endommagée.
• N’utilisez pas l’unité à proximité de l’eau.
• Ne placez pas l’unité à proximité de ou sur des radiateurs ou bouches de chaleur.
• Le boîtier de l’unité est doté de fentes et d’ouvertures destinées à assurer une ventilation adéquate. Pour garantir un fonctionnement fiable et protéger l’unité contre les surchauffes, ces ouvertures ne doivent jamais être bloquées ou couvertes.
• L’unité ne doit jamais être placée sur une surface molle (lit, canapé, tapis, etc.) car ses ouvertures de ventilation se trouveraient bloquées. De même, l’unité ne doit pas être placée dans un meuble fermé à moins qu’une ventilation adaptée ne soit assurée.
• Ne renversez jamais de liquides de quelque sorte que ce soit sur l’unité.
• Débranchez l’unité de la prise murale avant de la nettoyer. N’utilisez pas de produits de nettoyage liquide ou sous forme d’aérosol. Utilisez un chiffon humide pour le nettoyage de l’unité.
• L’appareil doit être alimenté par le type de source indiqué sur l’étiquette. Si vous n’êtes pas sûr du type d’alimentation disponible, consultez votre revendeur ou le fournisseur local d’électricité.
• Afin de ne pas endommager votre installation, vérifiez que tous les périphériques sont correctement mis à la terre.
• L’unité est équipée d’une fiche de terre à trois fils. Il s’agit d’une fonction de sécurité. Si vous ne parvenez pas à insérer la fiche dans la prise murale, contactez votre électricité afin qu’il remplace cette dernière qui doit être obsolète. N’essayez pas d’aller à l’encontre de l’objectif de la fiche de terre. Respectez toujours les codes de câblage en vigueur dans votre région/pays.
L’équipement doit être installé à proximité de la prise murale et le dispositif de déconnexion (prise de courant femelle) doit être facile d’accès.

La prise murale doit être installée à proximité de l’équipement et doit être facile d’accès.

Veillez à ce que rien ne repose sur le cordon d’alimentation ou les câbles. Acheminez le cordon d’alimentation et les câbles de sorte que personne ne puisse marcher ou trébucher dessus.

En cas d’utilisation d’une rallonge avec cette unité, assurez-vous que le total des ampérages de tous les produits utilisés sur cette rallonge ne dépasse pas l’ampérage nominal de cette dernière. Assurez-vous que le total des ampérages de tous les produits branchés sur la prise murale ne dépasse pas 15 ampères.

Pour contribuer à protéger votre système contre les augmentations et diminutions soudaines et transitoires de puissance électrique, utilisez un parasurtenseur, un filtre de ligne ou un système d’alimentation sans coupure (UPS).

Placez les câbles du système et les câbles d’alimentation avec précaution ; veillez à ce que rien ne repose sur aucun des câbles.

Lors du branchement ou du débranchement à des blocs d’alimentation permettant la connexion à chaud, veuillez respecter les lignes directrices suivantes:

Installez le bloc d’alimentation avant de brancher le câble d’alimentation à celui-ci.

Débranchez le câble d’alimentation avant de retirer le bloc d'alimentation.

Si le système présente plusieurs sources d’alimentation, déconnectez le système de l'alimentation en débranchant tous les câbles d'alimentation des blocs d'alimentation.

N’insérez jamais d’objets de quelque sorte que ce soit dans ou à travers les fentes du boîtier. Ils pourraient entrer en contact avec des points de tension dangereuse ou court-circuiter des pièces, entraînant ainsi un risque d’incendie ou de choc électrique.

N’essayez pas de réparer l’unité vous-même. Confiez toute opération de réparation à du personnel qualifié.

Si les conditions suivantes se produisent, débranchez l’unité de la prise murale et amenez-la à un technicien qualifié pour la faire réparer:

Le cordon d’alimentation ou la fiche ont été endommagés ou éraillés.

Du liquide a été renversé dans l’unité.
• L’unité a été exposée à la pluie ou à l’eau.
• L’unité est tombée ou le boîtier a été endommagé.
• Les performances de l’unité sont visiblement altérées, ce qui indique la nécessité d’une réparation.
• L’unité ne fonctionne pas normalement bien que les instructions d’utilisation soient respectées.
• N’utilisez que les commandes qui sont abordées dans le mode d’emploi. Le réglage incorrect d’autres commandes peut être à l’origine de dommages qui nécessiteront beaucoup de travail pour qu’un technicien qualifié puisse réparer l’unité.
• Tenez le câble de catégorie 5e/6 le plus éloigné possible des sources potentielles d’interférences électromagnétiques, telles que les câbles électriques, transformateurs et appareils d’éclairage. Ne nouez pas les câbles à des conduits électriques et ne les faites pas passer sur des installations électriques.
Montage sur bâti

Avant de travailler sur le bâti, assurez-vous que les stabilisateurs sont bien fixées sur le bâti, qu’ils sont étendus au sol et que tout le poids du bâti repose sur le sol. Installez les stabilisateurs avant et latéraux sur un même bâti ou bien les stabilisateurs avant si plusieurs bâtis sont réunis, avant de travailler sur le bâti.

Chargez toujours le bâti de bas en haut et chargez l’élément le plus lourd en premier.

Assurez-vous que le bâti est à niveau et qu’il est stable avant de sortir une unité du bâti.

Agissez avec précaution lorsque vous appuyez sur les loquets de libération du rail d’unité et lorsque vous faites coulisser une unité dans et hors d’un bâti ; vous pourriez vous pincer les doigts dans les rails.

Une fois qu’une unité a été insérée dans le bâti, étendez avec précaution le rail dans une position de verrouillage puis faites glisser l’unité dans le bâti.

Ne surchargez pas le circuit de l’alimentation CA qui alimente le bâti. La charge totale du bâti ne doit pas dépasser 80 % de la capacité du circuit.

Assurez-vous que tous les équipements utilisés sur le bâti, y-compris les multiprises et autres connecteurs électriques, sont correctement mis à la terre.

Assurez-vous que les unités présentes dans le bâti bénéficient d’une circulation d’air suffisante.

Assurez-vous que la température ambiante de fonctionnement de l’environnement du bâti ne dépasse pas la température ambiante maximale spécifiée pour l’équipement par le fabricant.

Ne marchez sur aucun appareil lors de la maintenance d’autres appareils d’un bâti.

## Troubleshooting

### General Operation

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>I am confused about which equipment the terms Local and Remote refer to.</td>
<td>See Terminology, page xvii for details</td>
</tr>
<tr>
<td>Erratic Operation</td>
<td>The KVM over IP switch needs to be started before any cascaded switches.</td>
</tr>
<tr>
<td></td>
<td>1. Make sure to power it on before powering on the switch.</td>
</tr>
<tr>
<td></td>
<td>2. If the cascaded switch was started before the KVM over IP switch, reset or restart the cascaded switch.</td>
</tr>
<tr>
<td></td>
<td>Press and release the Reset switch (see Reset Switch, page 12).</td>
</tr>
<tr>
<td>I have been given an account but I am unable to log in.</td>
<td>1. Make sure that you have correctly specified your Username and Password.</td>
</tr>
<tr>
<td></td>
<td>2. Make sure that the administrator has given you the necessary permission to access the switch.</td>
</tr>
<tr>
<td></td>
<td>3. Ask your administrator to see if the switch is under CC management. If it is, he will have to solve the situation either by disabling CC management on the switch (see page 164), or by deselecting it on the CC server (see the CC User Manual for details).</td>
</tr>
<tr>
<td>I can’t access the switch, even though I have specified the IP address and port number correctly.</td>
<td>If the switch is behind a router, the router’s Port Forwarding (also referred to as Virtual Server) feature must be configured. See Port Forwarding, page 260, for details.</td>
</tr>
<tr>
<td>When logging in from a browser, the following message appears: 404 Object Not Found.</td>
<td>If a login string has been set, make sure to include the forward slash and correct login string when you specify the KVM over IP switch’s IP address. (See Login String, page 179.)</td>
</tr>
<tr>
<td>Sudden loss of network connection.</td>
<td>Close your connection to the KVM over IP switch. Wait approximately 30 seconds, and log in again.</td>
</tr>
<tr>
<td>No remote server video display on the client computer.</td>
<td>Check that your KVM Adapter Cable’s firmware version is the same as the version stored in the switch’s Main firmware. See Upgrade Adapters, page 200 for details</td>
</tr>
<tr>
<td></td>
<td>Set the remote server resolution to 1280 x 1024 or less.</td>
</tr>
<tr>
<td>Problem</td>
<td>Resolution</td>
</tr>

<td>Close icon at the top right of the Port Access page.</td>
</tr>
</tbody>
</table>
## Mouse Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mouse and/or Keyboard not responding.</td>
<td>Check that your KVM Adapter Cable’s firmware version is the same as the version stored in the switch's Main firmware. See Upgrade Adapters, page 200 for details. Unplug the cable(s) from the console port(s), then plug it/them back in.</td>
</tr>
<tr>
<td>Mouse movement extremely slow</td>
<td>There is too much data being transferred for your connection to keep up with. Lower the video quality (see Video Settings, page 75) so that less video data is transmitted.</td>
</tr>
<tr>
<td>There are two mouse pointers after the remote server is accessed.</td>
<td>You can select another pointer type. See Mouse Pointer Type, page 88 for details.</td>
</tr>
<tr>
<td>When the mouse pointer is in Single Pointer mode, I can’t access the Control Panel.</td>
<td>Recall the Control Panel and immediately change the pointer to Dual mode.</td>
</tr>
<tr>
<td>Why is there a Dual Pointer mode?</td>
<td>When you are not in Mouse DynaSync Mode, you need the two pointers so that you know the remote server pointer is actually at the location you think it is at. Otherwise, you might perform a mouse operation and because of net lag the remote server pointer may not be at the location that your client computer pointer is at.</td>
</tr>
<tr>
<td>Mouse pointer confusion</td>
<td>If you find the display of two mouse pointers (local and remote) to be confusing or annoying, you can use the Toggle Mouse Display function to shrink the non-functioning pointer. See Toggle mouse display, page 67, and Mouse Pointer Type, page 88.</td>
</tr>
<tr>
<td>When I log in with my Windows system, the local and remote mouse pointers do not sync.</td>
<td>1. Check the status of the Mouse Sync Mode setting (see Mouse DynaSync Mode, page 90). If it is set to Automatic, change the setting to Manual and refer to the information for Manual Mouse Synchronization on page 91. 2. If you are in Manual mode, use the AutoSync feature (see Video Settings, page 75), to sync the local and remote monitors. 3. If that doesn't resolve the problem, use the Adjust Mouse feature (see Adjust mouse, page 67) to bring the pointers back in step. 4. If the above fails to resolve the problem, refer to Additional Mouse Synchronization Procedures, page 271, for further steps to take.</td>
</tr>
<tr>
<td>Problem</td>
<td>Resolution</td>
</tr>
<tr>
<td>-----------------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>When I log in with my Mac system, the local and remote mouse pointers do not sync.</td>
<td>There are two automatic Mouse DynaSync settings: the default, and Mac2. If mouse synchronization is not satisfactory with the default, try the Mac 2 setting. See the Note on page 91 for details.</td>
</tr>
<tr>
<td>When I log in with my Sun system, the local and remote mouse pointers do not sync.</td>
<td>Automatic Mouse DynaSync sync only supports USB mice on Windows and Mac (G4 or higher) systems. You must sync the pointers manually. See Mouse DynaSync Mode, page 90, and Manual Mouse Synchronization, page 91, for further details. After doing the above, refer to Sun / Linux, page 272, under Additional Mouse Synchronization Procedures for further steps to take.</td>
</tr>
<tr>
<td>When I log in with my Linux system, the local and remote mouse pointers do not sync.</td>
<td>Automatic Mouse DynaSync sync only supports USB mice on Windows and Mac (G4 or higher) systems. You must sync the pointers manually. See Mouse DynaSync Mode, page 90, Manual Mouse Synchronization, page 91, and Mac and Linux Considerations, page 91, for further details. After doing the above, refer to Sun / Linux, page 272, (under Additional Mouse Synchronization Procedures), for further steps to take.</td>
</tr>
</tbody>
</table>
## Virtual Media

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Virtual Media doesn’t work.</td>
<td>The remote server’s mainboard does not support USB. If there is a newer firmware and BIOS version for the remote server’s mainboard – one that supports USB – get it from the manufacturer and upgrade the server’s mainboard firmware and BIOS.</td>
</tr>
</tbody>
</table>
| There is no Virtual Media icon on my Control Panel. | 1. Virtual Media only supports devices connected with KA7166, KA7168, KA7169, KA7175, KA7176 or KA7177 KVM Adapter Cables with V-Series KVM over IP switches.  
  2. You must be have Administrator privileges on your client computer. (This is a Windows limitation.) |
| I can’t boot my remote server from my Virtual Media drive. | Your remote server’s BIOS doesn’t support booting from a USB drive. Get the latest firmware and BIOS version for your mainboard from the manufacturer and upgrade your mainboard BIOS. |
| If I connect a USB floppy drive to a remote server, it can boot the remote server. But, if I map it to the remote server as a Virtual Media drive, it cannot boot the remote server. | USB floppy drives have two types of format: UFI and CBI. Both can be used for OS level virtual media functions, but currently only UFI is supported for BIOS level (such as boot) functions. |
| I cannot mount a Folder as a Virtual Media device. | If the actual Folder is formatted with the FAT16 file system, it cannot be mounted if its size exceeds 2GB. |

## Web Browser

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
</table>
| After upgrading the firmware, after logging in with my web browser, the switch appears to still be using the old firmware version. | The switch is using the new firmware version but the browser is displaying a page that is stored in its cache. Simply log out and clear your browser’s cache.  
  * IE: Tools → Internet Options → Temporary Internet Files → Delete Files  
  * Firefox: Tools → Clear Private Data |
| Firefox only opens the Java Client Viewer. It doesn’t open the WinClient ActiveX Viewer. | The WinClient ActiveX Viewer requires ActiveX. Since Firefox doesn’t support ActiveX only the Java Client Viewer is available. |
**The WinClient ActiveX Viewer and the WinClient AP**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>My KVM over IP units don't show up in the Server List window when I start the WinClient AP program.</td>
<td>Only units whose Access Port settings for Program (see page 159) match the number specified for Port in the Server area of this dialog box appear in the Server List window. Make sure that your entry for Port matches the entry you have specified for Program on the Device Management Network page.</td>
</tr>
<tr>
<td>The WinClient ActiveX Viewer and the WinClient AP won't connect to the KVM over IP switch.</td>
<td>DirectX 8.0 or higher must be installed on your client computer.</td>
</tr>
</tbody>
</table>
| After upgrading the firmware, the WinClient ActiveX Viewer or WinClient AP do not run. | The old version of your .ocx file was not deleted. You must delete the old file. There are two methods to delete the file.  
1. For the ActiveX Viewer: Open IE → Tools → Manage Add-ons. Delete or disable all occurrences of WinClient.  
2. For the WinClient AP: Open Explorer and search for WinClient.ocx. Delete all occurrences. |
| Part of the remote window is off my monitor. | 1. Perform an Auto Sync (see WinClient Control Panel Functions, page 63 for details).  
2. If Keep Screen Size is not enabled (see Screen Options, page 93), use the AutoSync feature (see Video Settings, page 75), to sync the local and remote monitors.  
3. If Keep Screen Size is enabled, you can scroll to the areas that are off screen. |
| The remote screen is rotated 90 degrees. | Enable Keep Screen Size (see Control Panel Configuration, page 92). |
| I cannot run Net Meeting when the WinClient is running. | Enable Keep Screen Size (see Control Panel Configuration, page 92). |
| After logging in I can't open the WinClient ActiveX viewer. | 1. You don’t have the authority to install the WinClient Control add-on on your client computer. Have the person with administrator privileges on your client computer run the program the first time to get it installed. It will open for you after that.  
2. Under Vista, you must also add the switch’s URL address to the list of trusted sites: Tools → Internet Options → Security → Trusted Sites → Sites. |
Under Vista, after I open the WinClient ActiveX viewer and try to mount a driver or removable disk, I get a “Driver not ready” message.

This is a result of Vista’s UAC (User Account Control). There are two methods to resolve this problem:

1. If you are your client computer’s administrator, open your browser by right clicking its icon and choosing Run as..., then choose to run the browser with the administrator account.
2. If you are not your client computer’s administrator, you must ask your client computer’s administrator to disable UAC.

---

### The Java Applet and Java Client AP

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>I can’t connect to the KVM over IP switch.</td>
<td>1. The latest Java version must be installed on your client computer. 2. Check if you need to specify the Program port along with the IP address. See Java Client AP Login, page 51 for details 3. Close Java reopen it, and try again.</td>
</tr>
<tr>
<td>I have installed the latest Java JRE, but I am having performance and stability problems.</td>
<td>There may be issues with the latest version because it is so new. Try using a Java version that is one or two versions earlier than the latest one.</td>
</tr>
<tr>
<td>After upgrading the firmware, after logging in with the Java Client Viewer or the Java Client AP, the switch appears to still be using the old firmware version.</td>
<td>Log out. Delete your Java temporary internet files as follows: 1. Open Control Panel → Java. 2. In the Temporary Internet Files section, click Settings. 3. In the Disk Space section, click Delete Files. 4. In the dialog box that comes up, click OK.</td>
</tr>
<tr>
<td>The national language characters that I input do not appear.</td>
<td>Change the keyboard language of your client computer to English-UK. Use the KVM over IP switch’s On-Screen Keyboard and set the on-screen keyboard to the same language that the other system is using. (See The On-Screen Keyboard, page 86.)</td>
</tr>
<tr>
<td>Java performance deteriorates.</td>
<td>Exit the program and start again.</td>
</tr>
<tr>
<td>Pressing the Windows Menu key has no effect.</td>
<td>Java doesn’t support the Windows Menu key.</td>
</tr>
<tr>
<td>When I try to Add a folder to be mounted as a virtual media drive, I can’t select the folder. My only choice is Desktop.</td>
<td>In the folder selection entry field, enter the root directory of the folder you want to add. After that, the folders contained under the root directory will display. You can now navigate to the folder you want to select.</td>
</tr>
</tbody>
</table>
## Sun Systems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Video display problems with HDB15 interface systems (e.g. Sun Blade 1000 servers).*</td>
<td>The display resolution should be set to 1024 x 768 @ 60Hz: <strong>Under Text Mode:</strong> Go to OK mode and issue the following commands: <code>setenv output-device screen:r1024x768x60</code> <code>reset-all</code> <strong>Under XWindow:</strong> 1. Open a console and issue the following command: <code>m64config -res 1024x768x60</code> 2. Log out 3. Log in</td>
</tr>
<tr>
<td>Video display problems with 13W3 interface systems (e.g. Sun Ultra servers).*</td>
<td>The display resolution should be set to 1024 x 768 @ 60Hz: <strong>Under Text Mode:</strong> Go to OK mode and issue the following commands: <code>setenv output-device screen:r1024x768x60</code> <code>reset-all</code> <strong>Under XWindow:</strong> 1. Open a console and issue the following command: <code>fbconfig -res 1024x768x60</code> 2. Log out 3. Log in</td>
</tr>
</tbody>
</table>

*These solutions work for most common Sun VGA cards. If using them fails to resolve the problem, consult the Sun VGA card's manual.

## Mac Systems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When I log in to the KVM over IP switch with my Safari browser, it hangs when I use the Snapshot feature.</td>
<td>Force close Safari, then reopen it. Don’t use the Snapshot feature in the future. To use the Snapshot feature with Safari, upgrade to Mac OS 10.4.11 and Safari 3.0.4.</td>

</table>
Q1: When I open a viewer, the web page does not display or work correctly, and I receive an error message that is similar to one of the following:

![Error Message Example](image)

1. Reset the Internet Explorer security settings to enable Active Scripting, ActiveX controls, and Java applets

   By default, Internet Explorer 6 and some versions of Internet Explorer 5.x use the High security level for the Restricted sites zone and Microsoft Windows Server 2003 uses the High security level for both the Restricted sites zone and the Internet zone. To enable Active Scripting, ActiveX controls, and Java applets, follow these steps:

   a) Start Internet Explorer.
   b) On the Tools menu, click Internet Options.
   c) In the Internet Options dialog box, click Security.
   d) Click Default Level.
   e) Click OK.

2. Verify that Active Scripting, ActiveX, and Java are not blocked

   If some client computers work but others do not, verify that Internet Explorer or another program on your client computer such as an anti-virus program or a firewall are not configured to block scripts, ActiveX controls, or Java applets.

3. Verify that your anti-virus program is not set to scan the Temporary Internet Files or Downloaded Program Files folders
4. Delete all the temporary Internet-related files
   To remove all the temporary Internet related files from your client
   computer, follow these steps:
   a) Start Internet Explorer.
   b) On the Tools menu, click Internet Options.
   c) Click the General tab.
   d) Under Temporary Internet files, click Settings.
   e) Click Delete Files.
   f) Click OK.
   g) Click Delete Cookies.
   h) Click OK.
   i) Under History, click Clear History, and then click Yes.
   j) Click OK.

5. Make sure that you have the latest version of Microsoft DirectX installed
   For information about how to install the latest version of Microsoft
   DirectX, visit the following Microsoft Web site:
directx/downloads/default.htm

6. Make sure that you have the latest version of the Java JRE installed.
   For information about how to install the latest version of the JRE visit the
IP Address Determination

If you are an administrator logging in for the first time, you need to access the KVM over IP switch in order to give it an IP address that users can connect to. There are three methods to choose from. In each case, your client computer must be on the same network segment as the KVM over IP switch. After you have connected and logged in you can give the KVM over IP switch its fixed network address. (See Network, page 159.)

The Local Console
The easiest way to assign an IP address is from the local console. Refer to First Time Setup, page 39, for details on the procedure involved.

IP Installer
For client computers running Windows, an IP address can be assigned with the IP Installer utility. The utility can be obtained from the Download area of our website. Look under Driver/SW, and the model of your switch. After downloading the utility to your client computer, do the following:

1. Unzip the contents of IPInstaller.zip to a directory on your hard drive.
2. Go to the directory that you unzipped the IPInstaller program to and run IPInstaller.exe. A dialog box similar to the one below appears:
3. Select the KVM over IP switch in the Device List.

**Note:**
1. If the list is empty, or your device doesn't appear, click **Enumerate** to refresh the Device List.
2. If there is more than one device in the list, use the MAC address to pick the one you want. The KVM over IP switch’s MAC address is located on its bottom panel.

4. Select either **Obtain an IP address automatically (DHCP)**, or **Specify an IP address**. If you chose the latter, fill the IP Address, Subnet Mask, and Gateway fields with the information appropriate to your network.

5. Click **Set IP**.

6. After the IP address shows up in the Device List, click **Exit**. See **IP Installer**, page 160 for more information.

**Browser**

1. Set your client computer's IP address to 192.168.0.XXX
   
   Where XXX represents any number or numbers except 60. (192.168.0.60 is the default address of the KVM over IP switch.)

2. Specify the switch's default IP address (192.168.0.60) in your browser, and you will be able to connect.

3. Assign a fixed IP address for the KVM over IP switch that is suitable for the network segment that it resides on.

4. After you log out, reset your client computer's IP address to its original value.
IPv6

At present, the KVM over IP switch supports three IPv6 address protocols: Link Local IPv6 Address, IPv6 Stateless Autoconfiguration, and Stateful Autoconfiguration (DHCPv6).

**Link Local IPv6 Address**

At power on, the KVM over IP switch is automatically configured with a Link Local IPv6 Address (for example, fe80::210:74ff:fe61:1ef). To find out what the Link Local IPv6 Address is, log in with the KVM over IP switch’s IPv4 address and open the Device Management → Device Information page. The address is displayed in the General list box (see page 156).

Once you have determined what the IPv6 address is, you can use it when logging in from a browser or the Win and Java Client AP programs.

For example:

If you are logging in from a browser, you would key in

```
http://[fe80::2001:74ff:fe6e:59%5]
```

for the URL bar.

If you are logging in with the AP program, you would key:

```
fe80::2001:74ff:fe6e:59%5
```

for the IP field of the Server panel (see *Windows Client AP Login*, page 47).

**Note:**

1. To log in with the Link Local IPv6 Address, the client computer must be on the same local network segment as the KVM over IP switch.
2. The %5 is the %interface used by the client computer. To see your client computer’s IPv6 address: from the command line issue the following command: `ipconfig /all`. The % value appears at the end of the IPv6 address.
IPv6 Stateless Autoconfiguration

If the KVM over IP switch’s network environment contains a device (such as a router) that supports the IPv6 Stateless Autoconfiguration function, the KVM over IP switch can obtain its prefix information from that device in order to generate its IPv6 address. For example, 2001::74ff:fe6e:59.

As above, the address is displayed in the General list box of the Device Management → Device Information page (see page 156).

Once you have determined what the IPv6 address is, you can use it when logging in from a browser or the Win and Java Client AP programs.

For example:

If you are logging in from a browser, you would key in
http://[2001::74ff:fe6e:59]
for the URL bar.

If you are logging in with the AP program, you would key:
2001::74ff:fe6e:59
for the IP field of the Server panel (see Windows Client AP Login, page 47).
Port Forwarding

For devices located behind a router, port forwarding allows the router to pass data coming in over a specific port to a specific device. By setting the port forwarding parameters, you tell the router which device to send the data that comes in over a particular port to.

For example, if the KVM over IP switch connected to a particular router has an IP address of 192.168.1.180, you would log into your router’s setup program and access the Port Forwarding (sometimes referred to as Virtual Server) configuration page. You would then specify 192.168.1.180 for the IP address and the port number you want opened for it (9000 for Internet access, for example).

Since configuration setup can vary somewhat for each brand of router, refer to the router’s User Manual for specific information on configuring port forwarding for it.
## Keyboard Emulation

### Mac Keyboard

The PC compatible (101/104 key) keyboard can emulate the functions of the Mac keyboard. The emulation mappings are listed in the table below.

<table>
<thead>
<tr>
<th>PC Keyboard</th>
<th>Mac Keyboard</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Shift]</td>
<td>Shift</td>
</tr>
<tr>
<td>[Ctrl]</td>
<td>Ctrl</td>

PPP Modem Operation

Basic Setup

The KVM over IP switch can be accessed through its RS-232 port using a PPP dial-in connection, as follows:

1. Set up your hardware configuration to match the diagram, below:

2. From your client computer, use your modem dial-in program to dial into the KVM over IP switch’s modem.

   **Note:**
   1. If you don’t know the KVM over IP switch modem’s serial parameters, get them from the KVM over IP administrator.
   2. An example of setting up a modem dial-in program under Windows XP is provided on the next page.

3. Once the connection is established, open your browser, and specify 192.168.192.1 in the URL box.

   **Note:**
   1. The default username and password are blank.
   2. For the modem session, the KVM over IP switch has an IP address of 192.168.192.1; the user side has an IP address of 192.168.192.101.

From here, operation is the same as if you had logged in from a browser or with the AP programs.
Connection Setup Example (Windows XP)

To set up a dial-in connection to the KVM over IP switch under Windows XP, do the following:

1. From the Start menu, select Control Panel → Network Connections → Create a New Connection.
2. When the Welcome to the New Connection Wizard dialog box appears, click Next to move on.
3. In the Network Connection Type dialog box, select Connect to the network at my workplace, then click Next.
4. In the Network Connection dialog box, select Dial-up connection, then click Next.
5. In the Connection Name dialog box, key in a name for the connection (for example, TPE-KN8132-01), then click Next.
6. In the Connection Availability dialog box, you can select either Anyone’s use or My use only, depending on your preferences, then click Next.

   Note: If you are the only user on this client computer, this dialog box won’t appear.

7. In the Phone Number to dial dialog box, key in the phone number of the modem connected to the KVM over IP switch (be sure to include country and area codes, if necessary), then click Next.
8. In the Completing the New Connection Wizard dialog box, check Add a shortcut to this connection on my desktop, then click Finish.

This completes the connection setup. Double click the desktop shortcut icon to make a PPP connection to the KVM over IP switch.
Appendix

KA7140 Configuration and Operation

The KA7140 Adapter Cable connects a serial device to the KVM over IP switch.

Configuration

To configure the KA7140 to interact with the connected device, you need to set its serial parameters to match the parameters of the device, as follows:

1. In the Port Access page Sidebar, select the port that the KA7140 is connected to.

2. Select **Port Configuration** on the menu bar.
   The page comes up with the **Port Properties** tab selected:

![Port Properties Tab](image)
3. In the *Properties* section, drop down each of the lists to select the port property values that match the ones used by the connected serial console device. The port property settings that the KA7140 supports are given in the following table:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bits per second</td>
<td>This sets the port’s data transfer speed. Choices are from 300—38400 (drop down the list to see them all). Set this to match the baud rate setting of the serial console device. Default is 9600 (which is a basic setting for many serial console devices).</td>
</tr>
<tr>
<td>(Baud Rate)</td>
<td></td>
</tr>
<tr>
<td>Data Bits</td>
<td>This sets the number of bits used to transmit one character of data. Choices are: 7 and 8. Set this to match the data bit setting of the serial console device. Default is 8 (which is the default for the majority of serial console devices).</td>
</tr>
<tr>
<td>Parity</td>
<td>This bit checks the integrity of the transmitted data. Choices are: None; Odd; Even. Set this to match the parity setting of the serial console device. Default is Odd.</td>
</tr>
<tr>
<td>Stop Bits</td>
<td>This indicates that a character has been transmitted. Set this to match the stop bit setting of the serial console device. Choices are: 1 and 2. Default is 1 (which is the default for the majority of serial console devices).</td>
</tr>
<tr>
<td>Flow Control</td>
<td>This allows you to choose how the data flow will be controlled. Choices are: None, Hardware, and XON/XOFF. Set this to match the flow control setting of the serial console device. Default is None. <strong>Note:</strong> <em>None</em> is only supported for baud rates of 9600 and lower. For baud rates greater than 9600, you must choose <em>Hardware</em> or <em>XON/XOFF</em>.</td>
</tr>
<tr>
<td>Access Mode</td>
<td>This allows you to set the serial console device’s access mode. Choices are: Share, Occupy, and Exclusive. Default is Share. See <em>Access Mode</em>, page 130 for information regarding this function.</td>
</tr>
</tbody>
</table>

4. When you have finished making your selections, click **Save**.

**Operation**

To operate the device connected to the port, in the Port Access page double click the port to establish a serial connection to the device.
### KA7140 Pin Assignments

Pin assignments for the KA7140 Adapter are given in the table, below:

<table>
<thead>
<tr>
<th>Pin</th>
<th>Assignment</th>

[DB9 Female Diagram]
Internal Serial Interface Configuration

The KVM over IP switch provides a function that lets you configure an attached device’s serial interface parameters from within any accessed server. To do so:

1. From the accessed server, open a command line (terminal) session or third party serial application such as HyperTerminal or PuTTY.
2. Telnet or SSH to the KVM over IP switch’s IP address.
3. Log in with your usual Username and Password to bring up the access screen:

![Configuration Screen]

Navigation

The left panel shows the KVM over IP switch at the top, and all the serial interface devices connected to it listed below. The right panel shows the configuration parameters at the top, with the configuration settings in the area below.

- Use the Left and Right Arrow keys (← and →) to move the highlight bar between the right and left panels, and to select the parameter to configure.
- Use the Up and Down Arrow Keys (↑ and ↓) to select among the switch and the serial devices in the left panel; use them to select the configuration items in the right panel.
Operation

- Use the Up and Down Arrow Keys (↑ and ↓) to highlight a device in the left panel, then press [Enter] to open a command line (terminal) session on the accessed device.
- When you have finished with your session, press the hotkey (see page 269 and 270) that brings you back to the access page.
- To finish with this function, move the highlight bar to Logout in the right panel of the access page; Press the Down Arrow key to highlight Exit, then press [Enter].

Switch Level Configuration

The right panel configuration settings that can be made when the KVM over IP switch is selected in the left panel are described in the table, below:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port Configuration</td>
<td>When Port Configuration is selected, press the Down Arrow key to highlight the current timeout figure. Key in a new timeout figure to overwrite the current one. <strong>Note:</strong> There is no way to erase the figure you key in. If you want to change it, use the Up Arrow key to leave the field, then, use Down Arrow to come back to it. After you come back, key in the new figure. When you have finished, use Down Arrow to highlight Save, then press [Enter].</td>
</tr>
<tr>
<td>User Preferences</td>
<td>User Preferences lets you set a hotkey that brings you back to the access screen from the session you are working in. When User Preferences is selected, press the Down Arrow key to highlight the current hotkey letter. Key in the new letter to overwrite the current one. When you have finished, use Down Arrow to highlight Save, then press [Enter].</td>
</tr>
<tr>
<td>Logout</td>
<td>When Logout is selected, press the Down Arrow key to highlight Exit, then press [Enter].</td>
</tr>
</tbody>
</table>
Port Level Configuration

When a serial interface device is selected in the left panel, the screen looks similar to the one below:

The configuration settings that can be made when a serial interface device is selected are described in the table, below:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port Configuration</td>
<td>To configure the serial parameters:</td>
</tr>
<tr>
<td></td>
<td>1. Use the Up and Down Arrow keys to highlight the target item.</td>
</tr>
<tr>
<td></td>
<td>2. Press [Enter] to bring up the list of choices.</td>
</tr>
<tr>
<td></td>
<td>3. Use the Up and Down Arrow keys to highlight your choice, then press [Enter].</td>
</tr>
<tr>
<td></td>
<td>When you have finished, press the Down Arrow key to highlight Save, then press [Enter].</td>
</tr>
<tr>
<td>User Preferences</td>
<td>User Preferences lets you set a hotkey that brings you back to the access screen from the session you are working in.</td>
</tr>
<tr>
<td></td>
<td>When User Preferences is selected, press the Down Arrow key to highlight the current hotkey letter. Key in the new letter to overwrite the current one.</td>
</tr>
<tr>
<td></td>
<td>When you have finished, use Down Arrow to highlight Save, then press [Enter].</td>
</tr>
<tr>
<td>Logout</td>
<td>When Logout is selected, press the Down Arrow key to highlight Exit, then press [Enter].</td>
</tr>
</tbody>
</table>
Additional Mouse Synchronization Procedures

If you use Manual Mouse Synchronization, you should perform the following operations on the servers that connect to the switch.

**Note:**
1. These procedures are to be performed on the servers attached to the switch’s ports - not on the client computer you are using to access the KVM over IP switch.
2. In order for the local and remote mice to synchronize, you must use the generic mouse driver supplied with the Windows operating system. If you have a third party driver installed - such as one supplied by the mouse manufacturer - you must remove it.

**Windows:**
1. Windows 2000:
   a) Open the Mouse Properties dialog box (Control Panel → Mouse → Mouse Properties)
   b) Click the **Motion** tab
   c) Set the mouse speed to the middle position (6 units in from the left)
   d) Set the mouse acceleration to **None**
2. Windows XP / Windows Server 2003:
   a) Open the Mouse Properties dialog box (Control Panel → Mouse)
   b) Click the *Pointer Options* tab
   c) Set the mouse speed to the middle position (6 units in from the left)
   d) Disable *Enhance Pointer Precision*

![Mouse Properties dialog box](image)

3. Windows ME:
   Set the mouse speed to the middle position; disable mouse acceleration (click *Advanced* to get the dialog box for this).

4. Windows NT / Windows 98 / Windows 95:
   Set the mouse speed to the slowest position.

**Sun / Linux**

Open a terminal session and issue the following command:

- Sun: `xset m 1`
- Linux: `xset m 0` or `xset m 1`

(If one doesn’t help, try the other.)
- Linux using the Redhat AS3.0 mouse mode: `xset m 1`
Additional Video Resolution Procedures

If you are running Windows, and wish to use new refresh rates, do the following:

1. Open Control Panel → Display → Settings → Advanced → Monitor.

2. In the dialog box that comes up, make sure that the *Hide modes that this monitor cannot display* checkbox is unchecked.

3. Click the arrow at the right of the *Screen refresh rate* listbox, and select the refresh rate you want from the list that appears.

**Note:** Make sure that your monitor supports the refresh rate you choose – if not, you may seriously damage your monitor.
Trusted Certificates

Overview

When you try to log in to the device from your browser, a Security Alert message appears to inform you that the device’s certificate is not trusted, and asks if you want to proceed.

The certificate can be trusted, but the alert is triggered because the certificate’s name is not found on Microsoft list of Trusted Authorities. You have two options: 1) you can ignore the warning and click Yes to go on; or 2) you can install the certificate and have it be recognized as trusted.

- If you are working on a client computer at another location, accept the certificate for just this session by clicking Yes.
- If you are working at your own client computer, install the certificate on your client computer (see below for details). After the certificate is installed, it will be recognized as trusted.
Installing the Certificate

To install the certificate, do the following:

1. In the Security Alert dialog box, click View Certificate. The Certificate Information dialog box appears:

   ![Certificate Information Dialog Box]

   **Note:** There is a red and white X logo over the certificate to indicate that it is not trusted.

2. Click Install Certificate.

3. Follow the Installation Wizard to complete the installation. Unless you have a specific reason to choose otherwise, accept the default options.

4. When the Wizard presents a caution screen, click Yes:

   ![Security Warning Dialog Box]

5. Click Finish to complete the installation; then click OK to close the dialog box.
Certificate Trusted

The certificate is now trusted:

When you click View Certificate, you can see that the red and white X logo is no longer present – further indication that the certificate is trusted:
Mismatch Considerations
If the site name or IP address used for generating the certificate no longer matches the current address of the switch a mismatch warning occurs:

You can click Yes to go on, or you can disable mismatch checking. To disable mismatch checking, do the following:

1. After the page you are logging in to comes up open the browser’s Tools menu; Select Internet Options → Advanced.
2. Scroll to the bottom of the list and uncheck Warn about trusted certificates:
3. Click OK. The next time you run the browser the change will be in effect.
Self-Signed Private Certificates

If you wish to create your own self-signed encryption key and certificate, a free utility – openssl.exe – is available for download over the web at [www.openssl.org](http://www.openssl.org). To create your private key and certificate do the following:

1. Go to the directory where you downloaded and extracted openssl.exe to.

2. Run openssl.exe with the following parameters:

   ```
   openssl req -new -newkey rsa:1024 -days 3653 -nodes -x509 -keyout CA.key -out CA.cer -config openssl.cnf
   ```

   **Note:**
   1. The command should be entered all on one line (i.e., do not press [Enter] until all the parameters have been keyed in).
   2. If there are spaces in the input, surround the entry in quotes (e.g., “ATEN International”).

To avoid having to input information during key generation the following additional parameters can be used:

```
/C=/ST=/L=/O=/OU=/CN=/emailAddress.
```

**Examples**

```
openssl req -new -newkey rsa:1024 -days 3653 -nodes -x509 -keyout CA.key -out CA.cer -config openssl.cnf -subj /C=yourcountry/ST=yourstateorprovince/L=yourlocationor city/O=yourorganization/OU=yourorganizationalunit/CN=yourcommonname/emailAddress=name@yourcompany.com
```

```
openssl req -new -newkey rsa:1024 -days 3653 -nodes -x509 -keyout CA.key -out CA.cer -config openssl.cnf -subj /C=CA/ST=BC/L=Richmond/O="ATEN International"/OU=ATEN/CN=ATEN/emailAddress=eservice@aten.com.tw
```

**Importing the Files**

After the openssl.exe program completes, two files – CA.key (the private key) and CA.cer (the self-signed SSL certificate) – are created in the directory that you ran the program from. These are the files that you upload in the Private Certificate panel of the Security page (see Security, page 175, and Private Certificate, page 183).
Fan Location and Speed Information

Fan Location

The KVM over IP Switch has 3 fans that feed real-time fan speed information to the WinClient / Java Client Device Management page.

KN2116VA / KN4116VA / KN2132VA / KN4132VA / KN8132V

The speed of each of the fans in the above image are shown on the Device Information web page. See page 155 for details.
Clear Login Information

If you are unable to perform an Administrator login (because the Username and Password information has become corrupted or you have forgotten it, for example) you can clear the login information with the following procedure.

**Note:** Performing this procedure also returns all settings to their defaults.

To clear the login information (and return all settings to their defaults), do the following:

1. Power off the KVM over IP switch and remove its housing.
2. Use a jumper cap to short the mainboard jumper labeled **J25**.
3. Power on the switch.
4. When the Link and 10/100Mbps LEDs flash, power off the switch.
5. Remove the jumper cap from J25.
6. Close the housing and start the KVM over IP switch.

After powering on the unit, you can use the default Super Administrator Username and Password (see First Time Setup, page 39), to log in.
Factory Default Settings

The default settings are as follows:

<table>
<thead>
<tr>
<th>Setting</th>

9 NC not used
Supported KVM Switches

The following is a list of fully supported KVM switches that can be used in a cascaded installation:

- KH88
- KH98
- KH1508
- KH1516
- KH1508A
- KH1516A
- CS9134
- CS9138

Note: 1. Some of the KVM over IP switch’s features may not be supported, depending on the functionality of the cascaded KVM switch. (For example, some switches do not support virtual media.)

2. The installation cannot be cascaded beyond the second level.

Supported Power Over the Net™ Units

The following is a list of supported Power Over the Net™ units that can be connected to the KVM over IP switch:

- PN0108
- PN5212
- PN5320
- PN7212
- PN7320

Supported Power Distribution Units

The following is a list of fully supported PDU devices that can be connected to the KVM over IP switch:

- PE8r Series
- PE9r Series
Virtual Media Support

**WinClient ActiveX Viewer / WinClient AP**

- IDE CDROM/DVD-ROM Drives – Read Only
- IDE Hard Drives – Read Only
- USB CDROM/DVD-ROM Drives – Read Only
- USB Hard Drives – Read/Write*
- USB Flash Drives – Read/Write*
- USB Floppy Drives – Read/Write
- Smart Card Readers – Read/Write (KA7166, KA7168, KA7169, KA7177 Adapter Cable only)

* These drives can be mounted either as a Drive or as a Removable Disk (see Virtual Media, page 82). Removable disks allow the user to boot the remote server if the disk contains a bootable OS. In addition, if the disk contains more than one partition, the remote server can access all the partitions.

- ISO Files – Read Only
- Folders – Read/Write

**Java Client Viewer / Java Client AP**

- ISO Files – Read Only
- Folders – Read/Write
Limited Warranty

ALTUSEN warrants this product against defects in material or workmanship for a period of one (1) year from the date of purchase. If this product proves to be defective, contact ALTUSEN's support department for repair or replacement of your unit. ALTUSEN will not issue a refund. Return requests can not be processed without the original proof of purchase.

When returning the product, you must ship the product in its original packaging or packaging that gives an equal degree of protection. Include your proof of purchase in the packaging and the RMA number clearly marked on the outside of the package.

This warranty becomes invalid if the factory-supplied serial number has been removed or altered on the product.

This warranty does not cover cosmetic damage or damage due to acts of God, accident, misuse, abuse, negligence or modification of any part of the product. This warranty does not cover damage due to improper operation or maintenance, connection to improper equipment, or attempted repair by anyone other than ALTUSEN. This warranty does not cover products sold AS IS or WITH FAULTS.

IN NO EVENT SHALL ALTUSEN'S LIABILITY EXCEED THE PRICE PAID FOR THE PRODUCT. FURTHER, ALTUSEN SHALL NOT BE RESPONSIBLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OF THE PRODUCT, ITS ACCOMPANYING SOFTWARE, OR ITS DOCUMENTATION. ALTUSEN SHALL NOT IN ANY WAY BE RESPONSIBLE FOR, WITHOUT LIMITATION, LOSS OF DATA, LOSS OF PROFITS, DOWNTIME, GOODWILL, DAMAGE OR REPLACEMENT OF EQUIPMENT OR PROPERTY, AND ANY EXPENSES FROM RECOVERY, PROGRAMMING, AND REPRODUCTION OF ANY PROGRAM OR DATA.

ALTUSEN makes no warranty or representation, expressed, implied, or statutory with respect to its products, contents or use of this documentation and all accompanying software, and specifically disclaims its quality, performance, merchantability, or fitness for any particular purpose.

ALTUSEN reserves the right to revise or update its product, software or documentation without obligation to notify any individual or entity of such revisions, or update.

For details about extended warranties, please contact one of our dedicated value added resellers.
