EMC Information

FEDERAL COMMUNICATIONS COMMISSION INTERFERENCE STATEMENT:
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

The device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

CE Warning: This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

RoHS

This product is RoHS compliant.

Safety

This product has been classified as Information Technology Equipment.

SJ/T 11364-2006

User Notice
All information, documentation, and specifications contained in this manual are subject to change without prior notification by the manufacturer. The manufacturer makes no representations or warranties, either expressed or implied, with respect to the contents hereof and specifically disclaims any warranties as to merchantability or fitness for any particular purpose. Any of the manufacturer's software described in this manual is sold or licensed as is. Should the programs prove defective following their purchase, the buyer (and not the manufacturer, its distributor, or its dealer), assumes the entire cost of all necessary servicing, repair and any incidental or consequential damages resulting from any defect in the software.

The manufacturer of this system is not responsible for any radio and/or TV interference caused by unauthorized modifications to this device. It is the responsibility of the user to correct such interference.

The manufacturer is not responsible for any damage incurred in the operation of this system if the correct operational voltage setting was not selected prior to operation. PLEASE VERIFY THAT THE VOLTAGE SETTING IS CORRECT BEFORE USE.
Package Contents

The VM5404H / VM5808H package consists of:

- 1 VM5404H / VM5808H HDMI Matrix Switch with Scaler
- 1 Power Cord
- 1 IR Remote Control
- 1 IR Receiver
- 1 Mounting Kit
- 1 User Instructions*

Check to make sure that all the components are present and that nothing got damaged in shipping. If you encounter a problem, contact your dealer.

Read this manual thoroughly and follow the installation and operation procedures carefully to prevent any damage to the unit, and/or any of the devices connected to it.

* Features may have been added to the VM5404H / VM5808H since this manual was published. Please visit our website to download the most up-to-date version.

About this Manual

This User Manual is provided to help you get the most from your VM5404H / VM5808H system. It covers all aspects of installation, configuration and operation. An overview of the information found in the manual is provided below.

Chapter 1, Introduction, introduces you to the VM5404H / VM5808H system. Its purpose, features and benefits are presented, and its front and back panel components are described.

Chapter 2, Hardware Setup, describes how to set up your VM5404H / VM5808H installation.

Chapter 3, Front Panel Configuration, explains the fundamental concepts involved in operating the VM5404H / VM5808H at the local site via the front panel LCD display using pushbuttons.

Chapter 4, Browser Operation, provides a complete description of the VM5404H / VM5808H's Browser Graphical User Interface (GUI), and how to use it to remotely configure and operate the VM5404H / VM5808H.

Chapter 5, RS-232 Protocol Commands, provides a complete list of the serial control protocol commands used when utilizing the RS-232 Serial Port so that an extra source device can be utilized in the installation.

An Appendix, provides specifications and other technical information regarding the VM5404H / VM5808H.
Conventions

This manual uses the following conventions:

<table>
<thead>
<tr>
<th>Monospaced</th>
<th>Indicates text that you should key in.</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ]</td>
<td>Indicates keys you should press. For example, [Enter] means to press the Enter key. If keys need to be chorded, they appear together in the same bracket with a plus sign between them: [Ctrl+Alt].</td>
</tr>
<tr>
<td>1.</td>
<td>Numbered lists represent procedures with sequential steps.</td>
</tr>
<tr>
<td>♦</td>
<td>Bullet lists provide information, but do not involve sequential steps.</td>
</tr>
<tr>
<td>→</td>
<td>Indicates selecting the option (on a menu or dialog box, for example), that comes next. For example, Start → Run means to open the Start menu, and then select Run.</td>
</tr>
<tr>
<td>!</td>
<td>Indicates critical information.</td>
</tr>
</tbody>
</table>

Chapter 1
Introduction

Overview

The ATEN VanCryst VM5404H / VM5808H 4 x 4 / 8 x 8 HDMI Matrix Switch with Scaler is a versatile solution that provides an easy way to route high definition video and audio from any of 4/8 HDMI sources to any of 4/8 HDMI displays at the same time. As a Matrix Switch, each input can be independently connected to any or all outputs, giving you the ultimate in flexibility and control in any multi-display audio/video installation.

The VM5404H / VM5808H features Seamless Switching, which employs FPGA matrix system architecture to seamlessly switch between multiple sources and multiple displays. With EDID Expert technology, the VM5404H / VM5808H selects the optimum EDID settings for smooth power-up and the highest quality display. It also features a high-performing scaling engine that converts the video resolution into the display's native resolution to give you the best image quality.

You can easily configure the VM5404H / VM5808H via the front panel LCD display and pushbuttons, and through the use of an IR Remote Control. The LCD provides a quick view of all port connections, and lets operators access the unit’s built-in configuration utility.

Furthermore, the VM5404H / VM5808H allows convenient configuration and operation via an intuitive Graphical User Interface (GUI) using any web browser. The web GUI provides you with advanced features which include easy setup of custom Video Wall and Digital Signage configurations that can be saved and recalled. Because your VM5404H / VM5808H can be controlled over a standard TCP/IP connection, it conveniently integrates into any existing network for easy remote access. For complete system and install integration, serial control is standard through the VM5404H / VM5808H’s built-in RS-232 port that allows the switch to be controlled through a high-end controller or PC.

The VM5404H / VM5808H is an ideal solution for applications that require HDMI outputs from multiple sources to be conveniently delivered to multiple destinations, such as for stage presentations, competitions, control centers, and system installations that require real-time reports.
Features

- Connects any of 4 (VM5404H) or 8 (VM5808H) HDMI sources to any of 4 / 8 HDMI displays
- Long Distance Transmission – supports up to 15 m (24 AWG)
- HDMI (3D, Deep color); HDCP 1.4 compatible
- Video wall – provides up to 8/16 connection profiles that you can customize into layouts via web GUI
- Features a built in high-performance scaler function for best image quality
- Easily switch between multiple sources and multiple displays
- Seamless Switch – provides continuous video streams, real-time switching and stable signal transmission*
- Built-in EDID wizard – provides an easy way to customize EDID settings
- EDID Expert technology – selects optimum EDID settings for smooth power-up and highest quality display
- Configuration and control via: Front panel LCD display, pushbuttons, IR remote control and web GUI
- System Operation:
  - Serial controller
  - Browser Graphical User Interface (GUI)
  - Telnet
- Built-in bi-directional RS-232 serial port for high-end system control
- Superior video quality – HDTV resolution of 480p, 720p, 1080i and 1080p (1920 x 1080)
- Supports Dolby True HD and DTS HD Master audio
- Consumer Electronics Control (CEC) support
- Power On Detection – If an HDMI source is powered off the VM5404H / VM5808H automatically switches to the next powered on source
- Firmware Upgradeable
- Rack Mountable
- All metal casing

*Note: If Seamless Switching is enabled, the video output will not display 3D, Deep Color or interlace resolution (i.e., 1080i). For these features you must disable Seamless Switching.
Chapter 1. Introduction

Requirements

The following devices are required for a complete VM5404H / VM5808H installation:

Source Devices
- Computer or A/V source device with HDMI Type A output connector(s)

Note: A DVI/HDMI adapter is required when connecting a DVI source device.

Display Devices
- Display devices or receivers with an HDMI Type A input connector

Cables
- 1 HDMI cable for each source device you will be connecting
- 1 HDMI cable for each display device you will be connecting
- 1 Cat 5e cable
- 1 RS-232 serial cable

Note: No cables are included in this package. We strongly recommend that you purchase high-quality cables of appropriate length since this will affect the quality of the audio and video display. Contact your dealer to purchase the correct cable sets.
Source Device Operating Systems

Supported operating systems are shown in the table below:

<table>

</tbody>
</table>

**Note:** The VM5404H's IR remote control only supports use the 1–4 Input and 1–4 Output pushbuttons.
Chapter 2
Hardware Setup

1. Important safety information regarding the placement of this device is provided on page 89. Please review it before proceeding.

2. Make sure that the power to all devices connected to the installation are turned off. You must unplug the power cords of any computers that have the Keyboard Power On function.

Rack Mounting

The VM5404H / VM5808H can be mounted in a 19” (1U) system rack. For the most convenient front panel pushbutton configuration and operation at the local site, mount the unit at the front of the rack, as follows:

1. Use the M3 x 8 Phillips head hex screws supplied with the Mounting Kit to screw the rack mounting brackets onto the front of the unit.

2. Position the unit in the front of the rack and align the holes in the mounting brackets with the holes in the rack.

3. Screw the mounting brackets to the rack.
Grounding

To prevent damage to your installation, it is important that all devices are properly grounded.

1. Use a grounding wire to ground the VM5404H / VM5808H by connecting one end of the wire to the grounding terminal, and the other end of the wire to a suitable grounded object.

2. Make sure that all devices in your VM5404H / VM5808H installation are properly grounded.
Chapter 2. Hardware Setup

Cable Connection

Installation of the VM5404H / VM5808H is simply a matter of connecting the appropriate cables. Refer to the installation diagram on the following page (the numbers in the diagram correspond to the steps below), and do the following:

1. Use a grounding wire to ground the unit by connecting one end of the wire to the grounding terminal, and the other end of the wire to a suitable grounded object.

   **Note:** Do not omit this step. Proper grounding helps to prevent damage to the unit from surges or static electricity.

2. Connect up to 4 (VM5404H) or 8 (VM5808H) HDMI video sources to the HDMI Input ports
3. Connect up to 4 (VM5404H) or 8 (VM5808H) HDMI display devices to the HDMI Output ports
4. Connect the IR Receiver into the IR port.
5. (Optional) If using the Browser Operation features (see *Browser Operation*, page 35), plug a Cat 5e cable from the LAN into the VM5404H / VM5808H’s Ethernet port.
6. (Optional) If you are using the serial control function, use an appropriate RS-232 serial cable to connect the computer or serial controller to the VM5404H / VM5808H’s female RS-232 Serial port.
7. Plug the power cord supplied with the package into the VM5404H / VM5808H’s 3-prong AC socket, and then into an AC power source.
8. Power on the VM5404H / VM5808H and all devices in the installation.

Chapter 3

Front Panel Configuration

Overview

The VM5404H / VM5808H can be configured and operated locally via the front panel LCD/pushbuttons and IR Remote Control; remotely over a standard TCP/IP connection via graphical user interface (GUI) using a web browser; via a remote terminal session using Telnet; or by a RS-232 serial controller.

The local front panel operation is discussed in this chapter. Web GUI Operation is discussed in Chapter 4, and RS-232 serial control is discussed in Chapter 5.

Front Panel Pushbuttons

The front panel features an LCD display and pushbuttons for convenient operation locally. This allows users to perform operations such as selecting which source shows on which display, viewing the IP settings, configuring the serial port, setting the EDID Mode / CEC / OSD /Output Status, selecting security settings, and loading/saving profiles.

Note the following front panel pushbutton functions:

- Use the **MENU** pushbutton to access the Menu page options: IP Setting, Serial Port Setting, Operation Mode, Security Mode, and Save to a Profile (see *LCD Menu Organization*, page 21).

- Use the **PROFILE** pushbutton to switch between the connection profiles which have been added to the Profile List (see *Profile List*, page 37). Pressing this pushbutton for longer than 3 seconds displays the Save to a Profile page (see *Save to a Profile*, page 30).

- Use the **CANCEL** pushbutton to go back to a previous page, return to the Main Screen, stop or exit an operation.

- Use the **ENTER** pushbutton to select options and confirm operations.

- Use the **INPUT / OUTPUT (1–8) or (1-4)** pushbuttons to select the Input/Output port. These pushbuttons may also correspond to menu options, connection profiles, and so on.

- The VM5404H provides **Prev** / **Next** pushbuttons to navigate the menus.

- Use pushbuttons 7/8 (Prev/Next) to navigate the VM5808H menus.
Enter Password

Upon VM5404H / VM5808H startup, check the front panel LCD to view the loading progress. If the Password screen / LCD Menu fails to load, an error message displays. Reset the unit and try again.

If you are accessing the VM5404H / VM5808H for the first time, the Password screen appears as soon as the LCD loading process is done. Enter the default password 1234 to continue to the Main Screen (see Main Screen, page 17).

Additionally, the Password Screen appears if the VM5404H / VM5808H has been configured to require a password for Front Panel operation (see Security Mode, page 28).

To enter a password, do the following:

1. In the Enter Password field, check that the cursor is at the first asterisk (*) and flashing.

2. Use the front panel Input Port pushbuttons (1–8) or (1–4) to enter the 4-digit password. After the fourth digit has been entered correctly, the Main Screen displays.

3. Press Cancel to clear the password. The digits revert to 4 asterisks and the cursor goes back to the first asterisk.

**Note:**
1. The VM5404H / VM5808H password can be any four digit combination between 1111 to 8888 (VM5808H) or 1111 to 4444 (VM5404H). The default password is 1234.

2. If you enter an incorrect password, the cursor goes back to the first digit and reverts to flashing. The Incorrect Password message displays at the bottom of the screen, but clears as soon as a new password is entered.

3. If Password option is Enabled (see Security Mode, page 28), the LCD display time-out is 5 minutes by default.
Main Screen

The Main Screen shows the Input ports in the top row, which are tied to the Output ports shown in sequential order (1–8) at the bottom row.

- The front panel pushbutton label (1–8) corresponds to the Input ports and Output ports on the unit’s rear panel.
- Use the Menu pushbutton to view the LCD Menu (see LCD Menu Organization, page 21).
- Use the Profile pushbutton to switch between profile connections (see Profile List, page 37).

Port Switching

From the Main Screen, users can configure the Input-to-Output port connections to associate an Input source device to an Output display.

Input Port Selection

Use the Input Port pushbuttons to select the Input port you want to configure.

To select which input source displays on each output port, do the following:

1. Press any Input port pushbutton (1–8). The Output port LED(s) tied to the said Input port light(s) up (steady).

In the example below, pressing Input port 1 shows it is tied to Output ports 1 and 2.

(Continues on next page.)
(Continued from previous page.)

2. To disconnect an Output port from an Input port, press the corresponding Output port pushbutton.
   In the example below, Output port 2 has been disconnected from Input port 1.

   ![Diagram showing Output port 2 disconnected from Input port 1]

3. To switch to another Input port, press any Input port pushbutton. The Output port LED(s) tied to the said Input port light(s) up (steady).
   In the example below, pressing Input port 2 shows it is tied to Output ports 3 and 4.

   ![Diagram showing Input port 2 tied to Output ports 3 and 4]

4. To connect Output port 2 to Input port 2, press the Output port 2 pushbutton. The Output port 2 LED flashes (0.5 sec on, 0.2 sec off). As a result, Input port 2 is now connected to Output ports 2, 3 and 4.

   ![Diagram showing Input port 2 connected to Output ports 2, 3 and 4]

Once the signal from the selected Input port is successfully tied to the Output port, the LEDs turn off and the LCD information is updated.

**Note:**
1. Pressing an Input port a second time deselects it.
2. Input ports that are not configured or tied to any output port shows NA in the LCD screen.
3. Pressing the Cancel pushbutton once stops the Input Port Selection operation, and the LCD displays the active setting. Pressing the Cancel pushbutton again turns all LEDs off.
4. After 10 seconds of inactivity, all the LEDs turn off.
Output Port Selection

Use the Output Port pushbuttons to select the Output port you want to configure.

To select which output display corresponds to each input source device, do the following:

1. Press any Output port pushbutton (1–8).
   In the example below, Output port 1 pushbutton has been pressed. It is not tied to any Input port.

2. If an Output port pushbutton is pressed a second time, it is deselected and the LED turns off.

3. To connect the selected Output port(s) to an Input port, press the Input port pushbutton to which you want the Output port(s) tied. The newly selected Input port LED flashes (0.5 sec on, 0.2 sec off), and the LCD information is updated.
   In the example below, pressing Input port 2 ties it to Output ports 2, 3 and 4.
4. To switch Output ports 2, 3 and 4 to another Input port (and disconnect it from Input port 2), press another Input port pushbutton to which you want it tied.

In the example below, Input port 3 has been pressed and is now connected to Output ports 2, 3 and 4.

![Diagram of ports 2, 3, and 4](image)

**Note:**

1. Pressing an Output port a second time deselects it.

2. Pressing the Cancel pushbutton once stops the Output Port Selection operation, and the LCD displays the active setting. Pressing the Cancel pushbutton again turns all LEDs off.

3. After 10 seconds of inactivity, all the LEDs turn off.
Chapter 3. Front Panel Configuration

LCD Menu Organization

The VM5404H / VM5808H has a built-in configuration utility via the front panel LCD, which can be controlled by pressing the MENU and front panel Input pushbuttons (1–8). User can cycle through the menu options, starting from IP Setting page, in the order shown in the table below:

<table>
<thead>
<tr>
<th>Menu Page</th>
<th>Sub-Menu Page(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP Setting</td>
<td>IP Address</td>
</tr>
<tr>
<td></td>
<td>Subnet Mask</td>
</tr>
<tr>
<td></td>
<td>Gateway</td>
</tr>
<tr>
<td>Serial Port Setting</td>
<td>Baud Rate 9600 / 19200 / 38400 / 115200</td>
</tr>
<tr>
<td>Operation Mode</td>
<td>EDID Default / Port1 / Remix / Customized</td>
</tr>
<tr>
<td></td>
<td>CEC On / NA</td>
</tr>
<tr>
<td></td>
<td>OSD On / NA</td>
</tr>
<tr>
<td></td>
<td>Output Status On / NA</td>
</tr>
<tr>
<td>Security Mode</td>
<td>Password Enable / Disable</td>
</tr>
<tr>
<td></td>
<td>Change Password Old Password New Password</td>
</tr>
<tr>
<td>Save to a Profile</td>
<td>Save to a Profile No 01-08 (VM5404H); 01-16 (VM5808H)</td>
</tr>
</tbody>
</table>

Note: The highlighted values are the default settings of the VM5404H / VM5808H.

Menu Pushbutton

Press the MENU pushbutton to switch between the Main Screen and LCD Menu page. When the Menu is active, the MENU pushbutton’s built-in LED lights up:

From the Menu page:
- Press 1 to go to the IP Setting page (see IP Setting, page 22)
- Press 2 to go to the Serial Port Setting page (see Serial Port Setting, page 23)
- Press 8 to go to the next page(s) for the sub-menu pages
• Press **Menu** or **Cancel** to return to the Main Screen

**IP Setting**
The IP Setting page displays the VM5404H / VM5808H’s IP configuration. The values in the LCD Menu are read-only and can be edited via the Browser GUI (*User Management*, page 67).

**IP Address / Subnet Mask**
To view the VM5404H / VM5808H’s IP address and Subnet Mask, do the following:

1. From the Menu page, press **1** to see the IP Setting submenu. The IP address and Subnet Mask are then shown.

   ![IP Address and Subnet Mask](image)

   **Note:** The VM5404H / VM5808H default IP address is 192.168.0.60. The default Subnet Mask is 255.255.255.0

2. Press **8** to go to the next page.
3. Press **Menu** to return to the Menu page.
4. Press **Cancel** to return to the previous page without saving.

**Gateway**
To view the VM5404H / VM5808H’s gateway address, do the following:

1. From the Menu page, press **1** to see the IP Setting submenu, then press **8** to get to the next page. The gateway address displays.

   ![Gateway](image)

   **Note:** The default Gateway is 192.168.0.1.

2. Press **7** to go to the previous page.
3. Press **Menu** to return to the Menu page.
4. Press **Cancel** to return to the previous page without saving.
Serial Port Setting
To configure the VM5404H / VM5808H’s baud rate for its serial port connection, select Serial Port Setting from the Menu page.

Baud Rate
To set the VM5404H / VM5808H’s baud rate, do the following:

1. Select Baud Rate Setting from the Serial Port Setting submenu by pressing 1:

2. Press pushbuttons 1–4 to make your selection.

Baud Rate options are:
- 1: 9600
- 2: 19200 (In use)
- 3: 38400
- 4: 115200

Note: The default baud rate is 19200.

3. Press Menu to return to the Menu page.
4. Press Cancel to return to the previous step without saving.
Operation Mode

The EDID Mode, CEC, OSD and Output Status features can be configured from the Operation Mode page.

- EDID (Extended Display Identification Data) is used to have the VM5404H / VM5808H automatically apply a preset video configuration or EDID Mode, which utilizes the best resolution across different monitors
- Consumer Electronics Control (CEC) allows interconnected HDMI devices to communicate and respond to one remote control
- The OSD, when enabled for a port, lets an attached display/monitor show real-time port switching information
- The Output Status shows whether the video/audio of an Output port is turned on or off

To configure the VM5404H / VM5808H’s operation mode settings from the Main Screen, use the Menu pushbutton to access the Menu page, press 8 to navigate to the next page, then press pushbutton 1 to access the Operation Mode page.

EDID Mode

To configure the EDID Mode, do the following:

1. From the Operation Mode page, press pushbutton 1:

   (Continues on next page.)
2. Press pushbuttons 1–4 to make your selection.

<table>
<thead>
<tr>
<th>EDID Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1: Port1</td>
<td>The EDID from port1 is passed to all video sources.</td>
</tr>
<tr>
<td>2: Default</td>
<td>The default EDID is passed to all video sources.</td>
</tr>
<tr>
<td>3: Remix</td>
<td>Uses the EDID of each connected display according to its connection when the VM5404H / VM5808H is first powered on, or immediately after pressing 3 to select the Remix option.</td>
</tr>
<tr>
<td>4: Customized</td>
<td>Automatically retrieves and saves the EDID settings of a connected monitor/display device to an input source port. This can be configured using the Browser GUI. See Customized EDID Settings, page 60.</td>
</tr>
</tbody>
</table>

3. Press **Menu** to return to the Menu page.
4. Press **Cancel** to return to the previous step without saving.

**CEC**

To configure the CEC setting, do the following:

1. From the Operation Mode page, press pushbutton **2**:

<table>
<thead>
<tr>
<th>1: EDID Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>2: Default</td>
</tr>
<tr>
<td>3: Remix</td>
</tr>
<tr>
<td>4: Customized</td>
</tr>
</tbody>
</table>

2. Press pushbuttons 1–8 to enable (ON) or disable (NA) the CEC feature for the output port. If the port does not support CEC, an **NA** is shown.

   OUTPUT | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8
   |-----|---|---|---|---|---|---|---|---
   | NA  | ON| NA| ON| NA| ON| NA| NA| ON

   **Note:** The default CEC setting is NA.

3. Press **Menu** to return to the Menu page.
4. Press **Cancel** to return to the previous step without saving.
**OSD**

The On-Screen Display or OSD feature enables real-time text updates to appear on the display device’s screen for any configuration changes made to the Output port via the VM5404H / VM5808H’s front panel, IR remote control or Browser GUI.

To configure the OSD setting for each output port, do the following:

1. From the Operation Mode page, press 8 to go to the next page, then press pushbutton 1:

   ![OSD Configuration Screen](image)

2. Press pushbuttons 1–8 to enable (ON) or disable (NA) the OSD feature for the output port.

   ![Output Status Screen](image)

   **Note:** The default OSD setting is On.

3. Press **Menu** to return to the Menu page.

4. Press **Cancel** to return to the previous step without saving.
Output Status

To configure the Output Status settings for each output port, do the following:

1. From the Operation Mode page, press 8 to go to the next page, then press pushbutton 2:

2. Press pushbuttons 1–8 to enable (ON) or disable (NA) the video/audio of the output port.

Note: The default Output Status setting is On.

3. Press Menu to return to the Menu page.

4. Press Cancel to return to the previous step without saving.
Security Mode

The Security Mode page allows users to manage the VM5404H / VM5808H’s password-related settings; the Password page configures the VM5404H / VM5808H to require a password for local operation after the LCD display times out or is powered off/on; the Change Password option allows users to set a new password for the VM5404H / VM5808H.

To configure the VM5404H / VM5808H’s password settings from the Main Screen, use the Menu pushbutton to access the Menu page, press 8 to navigate to the next pages, then press pushbutton 2 to access the Security Mode page.

Password

1. To set the VM5404H / VM5808H to require a password for local operation, press pushbutton 1.

2. To require a password after the LCD display times out or is powered off/on, press pushbutton 1. Otherwise, press pushbutton 2.

Note: If Password is Enabled, the LCD display’s default time-out is 5 minutes.

3. Press Menu to return to the Menu page.
4. Press Cancel to return to the previous step without saving.
Chapter 3. Front Panel Configuration

Change Password

1. To change the password for accessing the unit, press pushbutton 2.

2. In the Old Password field, the cursor flashes at the first digit. Enter the old password (see Enter Password, page 16). If the old password is entered correctly, you can proceed to the next step.

   ![Old Password Field]

Note: If you entered an incorrect password, an error message appears and the cursor goes back to the first digit (flashing). The Incorrect Password message clears as soon as a new digit is entered.

3. In the New Password field, the cursor flashes at the first digit. Enter the new password using the front panel number pushbuttons (1111–8888).

4. Re-enter the new password in the following screen. The new password is applied by the VM5404H / VM5808H immediately.

   ![Re-enter New Password Field]

If the password you entered does not match the one entered in the previous screen, an error message appears. Enter the new password correctly.

5. Press Menu to return to the Menu page.

6. Press Cancel to return to the previous step without saving.
Save to a Profile

The switch allows users to store up to 8 (VM5404H) or 16 (VM5808H) different connection profiles that can be saved and recalled later.

The active Input-to-Output port connections on the LCD Main Screen is the configuration saved to a profile. When a user loads a profile, the change is immediate and the profile number is shown on the lower right corner of the LCD screen.

To save a profile once the desired port connections are set, do the following:

1. Press the Menu pushbutton to access the Menu page, then 8 to navigate to the next pages. Press pushbutton 1 to open the select Save to a Profile page.

2. On the page that opens, you are asked to give the profile a number. Use the front panel number pushbuttons to select a profile number into which you want to save the configuration.

VM5404H: Options are P1–P8 (when saving a profile via the LCD), where:
- Input port pushbuttons 1–4 correspond to Profile P1 to P4
- Output port pushbuttons 1–4 correspond to Profile P5 to P8

VM5808H: Options are P1–P16 (when saving a profile via the LCD), where:
- Input port pushbuttons 1–8 correspond to Profile P1 to P8
- Output port pushbuttons 1–8 correspond to Profile P9 to P16

3. Press Enter to store the configuration – the LCD shows Profile Saved.

4. Press Menu to return to the Menu page,

5. Press Cancel to return to the previous step without saving.

Note: Access the Save to a Profile page quickly by pressing the Profile pushbutton for longer than 3 seconds.
Profile Pushbutton

The PROFILE pushbutton lets users conveniently switch between connection profiles that have been saved or added to the Profile List (see Profile List, page 37).

If a Profile is in use, its profile number (P1–P32) is shown on the lower right corner of the LCD display.

The Profile pushbutton functions as follows:

- Press the Profile pushbutton for 1–2 seconds to cycle between profiles stored in the GUI’s Profile List (from 1 up to 16, depending on how many are added to the list)
- Alternatively, after pressing the Profile pushbutton (lights), use the Input/Output pushbuttons to switch to a specific profile (from P1 to P16 only). Note that:
  - Input ports 1–8 or 1-4 correspond to Profile P1 to P8 or P1 to P4
  - Output ports 1–8 or 1-4 correspond to Profile P9 to P16 or P5 to P8 (where Output Port 1=Profile 9, Output Port 2=Profile 10... Output Port 8=Profile 16)

The selected pushbutton lights steady, and the VM5404H / VM5808H immediately applies the port connections configured in the selected profile.

- When the Profile pushbutton is pressed for 3 seconds or more, the LCD directs to the Save to a Profile page (see Save to a Profile, page 30)
- Press the Cancel pushbutton to exit

Note: If there are no profiles configured on the VM5404H / VM5808H device, an error message “No Profile List defined. Profile List can be edited via the Web GUI” is displayed when the Profile pushbutton is pressed.

A Profile’s port connections can be edited using the front panel pushbuttons (see Port Switching, page 17) or via the Connections page of the Browser GUI (see Main Page, page 36). Additionally, the Profile List can be configured via the Profile page of the Browser GUI (see Profile List, page 37).
IR Remote Control Operation

The IR remote control (IR Remote Control, page 9) included with the VM5404H / VM5808H can be used to:

- change the Input source of any Output display
- power on/off individual Output displays; or
- power on/off all Output displays simultaneously

Before using the remote control, a user must first plug the IR External Receiver into the rear panel of the VM5404H / VM5808H and place the receiver where the IR signal can be reached (see IR Port, page 8).

Change the Input source of an Output display

To change the Input source of an Output display, using the remote control, do the following:

1. Press the Output port number (1–8) or (1-4) you want to change.
2. Within 2 seconds press the Input port number (1–8) or (1-4) you want the Output port to display.*
3. Repeat steps 1-2 to change additional ports.

*For the change to occur the Input number must be pressed within 2 seconds of pressing the Output number.

Power on/off individual Output displays

To power on/off individual Output displays, using the remote control, do the following:

1. Press the Output port number (1–8) or (1-4) you want to power on/off.
2. Within 2 seconds press the ON or OFF pushbutton.*
3. Repeat steps 1-2 to change the power status back on/off.

*If the ON or OFF pushbutton is pressed after 2 seconds of pressing the Output port number, all the displays are powered on or off instead of just the intended Output port.
Power on/off all Output displays

To power on/off all Output displays simultaneously, with the remote control, do the following:

1. Press the **ON** or **OFF** pushbutton.*

2. Repeat step 1 to simultaneously change back the power status of all Output ports, to on or off, respectively.

*The **ON** or **OFF** pushbuttons bring all displays to the same power status, regardless of the individual power statuses.
Chapter 4
Browser Operation

Overview

The VM5404H / VM5808H can be configured over a standard TCP/IP connection via its built-in Graphical User Interface (GUI). Because it can be accessed from anywhere over a network or the Internet, operators can easily log in via web browser. Security is ensured by password protection and user-configurable time-out. The VM5404H / VM5808H supports three levels of remote users with various privileges, and up to 32 users can log into the GUI at one time. For full details, see the sections that follow.

Logging In

To access the GUI, type the VM5404H / VM5808H’s IP address into the address bar of any browser. If a Security Alert dialog box appears, accept the certificate – it can be trusted. The login screen appears:

- The default IP address is http://192.168.0.60
- The default Username and Password are: administrator / password
- Enter the username and password, then click Login.
- The same user can not be logged in simultaneously.
- Use the drop-down menu to select the GUI language

Note: The username supports lower case letters only.
Main Page

The Main Page opens to the **Profile List**. This is where you configure the input to output connections by creating profiles. The page is divided into three parts: the **Menu Bar**, **Profile List**, and **Profile Scheduling**.

**Menu Bar**

The Menu Bar consists of the **Settings** icon and two drop-down menus.

- Click **Settings** to enter the System Settings (see page 52).
- Click the **User** menu to select **Logout** or **User Management** (see page 67).
- Click the **Language** menu to select the GUI language.
Profile List

The Profile List lets you configure the input to output port connections by creating profiles to use. You can store up to 8 (VM5404H) or 16 (VM5808H) differently configured profiles that can be saved and played by two methods: locally via the unit’s front panel pushbuttons and via the web GUI.

Adding/Playing a Profile

To configure a connection profile:

1. From the Profile List, click a [Profile].
2. Select the profile type:

   Digital Signage: Select this option for video that is displayed independently on separate monitors (page 42).

   Video Wall: Select this option for monitors that are displayed together - tiled or as a large screen (page 45).
3. Configure the input to output connections for a Digital Signage (page 42) or Video Wall (page 45) profile.

4. New profiles appear in the Profile List, as shown here:

![Profile List Image]

5. Select the profile and click **Apply**.

6. The profile appears in the large **Play** window and the connections start:

![Profile List Image with selected profile]

**Note:** More information about Profile List page options are provided on the next page.
Profile List Options
Clicking a Profile or the Play window opens a pop-up menu with options.

Profile

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apply</td>
<td>Click Apply to put the profile in the Play window. This allows you to start the profile connections.</td>
</tr>
<tr>
<td>Edit</td>
<td>Click Edit to configure the profile’s input to output connections.</td>
</tr>
</tbody>
</table>

Play Window

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hide OSD</td>
<td>Check Hide OSD to show/hide text updates that appear on the display when configuration or port changes are made.</td>
</tr>
<tr>
<td>Mute All</td>
<td>Check Mute All to mute the audio for all ports.</td>
</tr>
<tr>
<td>Blank All</td>
<td>Check Blank All to turn off the video to all displays.</td>
</tr>
<tr>
<td>On Sequence</td>
<td>On Sequence will appear when a profile schedule is playing (see page 41).</td>
</tr>
<tr>
<td>&lt;</td>
<td>Click &lt; to go back to the previous profile in the sequence, when Profile Scheduling is in use. Only available with On Sequence.</td>
</tr>
<tr>
<td>&gt;</td>
<td>Click &gt; to advance to the next profile in the sequence, when Profile Scheduling is in use. Only available with On Sequence.</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>----------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Positioning</td>
<td>Click <strong>Positioning</strong> to open a window that allows you to adjust the image position on each display. For Video Wall profiles you can also set the Bezel Dimension, which is the line size between each display.</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the profile from the Play window.</td>
</tr>
<tr>
<td>Edit</td>
<td>Click <strong>Edit</strong> to configure the profile's input to output connections.</td>
</tr>
</tbody>
</table>
Profile Scheduling

Profile Scheduling is located below the Profile List. Scheduling allows you to queue and play connection profiles in sequence for a specific amount of time.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Add Profile]</td>
<td>Click to add profiles to the schedule in the order to be played, left to right, then set the amount of time each profile plays.</td>
</tr>
</tbody>
</table>
| ![Profile Options] | Click a profile for a pop-up menu to appear:  
  * Select **Startup** to use the profile as the starting point for the schedule.  
  * Click **Replace** to replace the selected profile with another profile.  
  * Click **Remove** to delete the profile from the schedule.  
  * Use `< >` to change the profile’s position in the schedule. |
| ![Duration Options] | Use the drop-down menu to select the duration (Hours, Minutes, or Seconds) and enter the amount of time for the profile to play. After the time expires the schedule switches to the next profile.  
  Use **Repeat** to stop the schedule and stay on that profile. If repeat isn’t used the schedule will loop back to the first profile. |
| ![Save & Play] | **Save & Play** Click **Save & Play** to save the schedule and put it in the Play window to start the connections schedule. After saving, the Profile Scheduling window will close and the schedule will start. |
| ![Save Only] | **Save Only** Click **Save Only** to save the schedule as it appears. After saving, the Profile Scheduling window will close.  
  When a Profile Schedule is playing the On Sequence box will appear in the Play window. |
| ![Cancel] | **Cancel** Click **Cancel** to discard changes and return to the Profile Schedule page. |
Connection Profiles

There are two types of profiles: Digital Signage and Video Wall. Digital Signage profiles are for displays where video is viewed on separate monitors. Video Wall profiles are for displays that are tiled together, where multiple monitors form one large screen – in various arrangements.

Digital Signage Profile

Each icon represents an output port and the connected display. The large number is the Input port selected for the display. The small number (upper-left corner) is the Output port for the display. Click the icons to select options.

- Select icons to choose the Video Input from the Select Source menu.
- Click the PEN icon or name to edit the profile name.
- Click OSD to select Turn All On or Turn All Off.
- Click Screen to select Blank All or Show All.
- Click Audio to select Mute All or Turn All On.
- Click Save to save the profile or Save as to save as a different profile number.
- Click Traditional View to use an alternate method for configuring connection profiles (see page 44).
Chapter 4. Browser Operation

</table>
Traditional View
The Traditional View allows you to select the Input to Output connections using a simple grid.

- From an Output Port column, click a box to select its Input Port. The box will turn orange.
- Uncheck an Output Port box to disable the video for that Output Port. The column will turn dark grey.
- Check an Output Port box to enable the video for that Output Port.
- Click Save to save the profile. Click Save as to save as a different profile number.

Output Options
For instructions on the Output Options, see Output Options, page 50.
Video Wall Profile

Each blank icon represents an Output port and the connected display. Use the icons to create Independent and Grouped Outputs. **Independent Outputs** will display video on a single monitor. **Grouped Outputs** will display video across multiple monitors as one large screen.

Video Wall Options

- Click an icon to choose its **Output** and **Video Input** from the *Display Preference* menu (see page 47).
- Click multiple icons to Group Outputs (see *Grouping*, page 47) and choose the **Video Input** from the *Display Preference* menu.
- Use + next to **Display Layout _1** to create additional layouts under the same profile.
- Click the PEN icon or name to edit the profile name.
- Click **OSD** to select *Turn All On* or *Turn All Off*.
- Click **Screen** to select *Blank All* or *Show All*.
- Click **Audio** to select *Mute All* or *Turn All On*.
- Click **Save** to save the profile or **Save as** to save as a different profile number.
**Number of Displays / Bezel Dimension**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Displays</td>
<td>Use the Horizontal and Vertical drop-down menu to select the number of displays that make up the video wall. Match this to the physical layout of the displays. Click Apply to set the layout.</td>
</tr>
<tr>
<td>Bezel Dimension</td>
<td>Use the four boxes to increase/decrease the line size (gap) between the active displays.</td>
</tr>
<tr>
<td>Monitor Lock / Unlock</td>
<td>Click the monitor icon to Lock the (4) bezel settings, so that when one size is changed they all change. Click the monitor icon to Unlock the (4) bezel settings, so that each size can be set independently.</td>
</tr>
</tbody>
</table>

**Blank Output**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blank Icon</td>
<td>Click Blank Output icons to highlight icons in green and use the Display Preferences menu to set the video options (see Display Preferences, page 48). Select a single icon to set the Output and Video Input for an independent display (see Independent Output, page 47). Select multiple icons and set the Video Input to group displays as one screen (see Grouping, page 47). You must first set the Output port for each icon.</td>
</tr>
<tr>
<td>Drop-down Menu</td>
<td>Use the drop-down menu to select the Output port.</td>
</tr>
</tbody>
</table>
## Independent Output

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| Independent Output | Independent Outputs are displays that have their own Video Input and Output selected. Independent Outputs:  
  - Display their own video  
  - Icons have their own color and Video Input  
  Select an Independent Output and use the Display Preferences (page 48) menu select the Video Input. |
| Drop-down Menu  | Use the drop-down menu to select the Output port.                                                                                           |
| Mute / Video    | Click the speaker icon to mute the audio on/off. Click the video icon to turn the video on/off.                                              |
| OSD: ON / OFF   | Click OSD:ON / OSD:OFF to show/hide text updates that appear on the display when configuration or port changes are made.                     |

## Grouping

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| Grouping | Click multiple icons to Group Outputs (highlighted in green) and click →← to group the displays into one screen*. Use the Display Preferences menu to select the Video Input for the group - each Output icon in the Group will appear with the same Video Input number and icon color (see Group, page 48).  
  **Note:** Before grouping you must set the Output port for each icon. |
| Ungroup | Select a group and click ←→ to ungroup the displays.                                                                                       |
## Group

A **Group** (of Outputs) shares the same **Video Input** and displays the video together as one large screen. A Group of Outputs:

- Displays video across multiple monitors to form one screen.
- Icons have the same color and Video Input number.
- Select a Group and use the **Display Preferences** menu to select the **Video Input**.
- To group outputs see *Grouping*, page 47.

### Mute / Video

- Click the **speaker** icon to mute the audio on/off.
- Click the **video** icon to turn the video off/on.

### OSD:ON / OFF

- Click **OSD:ON / OSD:OFF** to show/hide text updates that appear on the display when configuration or port changes are made.

## Display Preferences

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display Preferences</td>
<td>Click Output icons for the Display Preferences menu to appear— to select the <strong>Output</strong> and/or <strong>Video Input</strong> port.</td>
</tr>
</tbody>
</table>
Chapter 4. Browser Operation

Video Wall Example

The example below shows a video wall with 8 displays.

- Each Group and Independent Output has a unique color.
- This video wall has 1 Group and 4 Independent displays.
- The Group will show Video Input 02 across all four displays as one large screen.
- The Independent displays will show the video from their own Video Input – 03, 04, 05, and 06.
- Add Display Layouts to create separate video walls (see Video Wall Options, page 45).
Output Options

The Output Options page is used to configure HDMI Video and OSD/CEC options.

**HDMI Video Options**

HDMI Video Options allow you to set Seamless Switch options which determine how a display performs when the input port is changed.

- The Transition, Period and Scale Resolution apply only when Seamless Switching is on.
- **Seamless Switch**: Turning Seamless Switch on removes the video distortion and delay seen when an input port is switched.
  - Use the drop-down menu to apply to all ports, or the ON/OFF button to enable/disable Seamless Switching per port.
- **Transition**: Allows you to fade the video display when the input port is changed. Use the period option to set the fade speed.
  - Use the drop-down menu to apply to all ports, or ON/OFF button to enable/disable Transitions per port.
- **Period**: Sets the fade speed for the Transition option.
  - Use the drop-down menu to apply an option (Slow, Normal, or Fast) to all ports, or lower drop-down menus to apply options per port.
- **Scale Resolution**: Forces the port to scale the video displayed to the selected resolution.
Use the top drop-down menu to apply an option to all ports, or lower drop-down menus to apply options per port.

Click Save to save the settings. Click Save as to save the settings as a different profile number.

**Other Options**

This section allows you to set the OSD and CEC options.

- **OSD**: Sets the default OSD option for the port. When OSD is on: real-time text updates appear on the display when configuration and port changes are made to the output.
  
  - Use the drop-down menu to apply options to all ports, or ON/OFF button to enable/disable the OSD for a port.

- **CEC**: Consumer Electronics Control (CEC) allows interconnected HDMI devices to communicate and respond to one remote control.
  
  - Use the drop-down menu to apply options to all ports, or On/Off button to enable/disable CEC for a port.

- Click Save to save the settings. Click Save as to save the settings as a different profile number.
System Settings

Click the Settings link from the Main page for the System Settings to open on the General page:

- The General page allows you to set Fan, Baud Rate and HDCP settings.
- The Port Name page allows you to name each input and output port.
- The Network page allows configuration of the network settings.
- The EDID page is used to set the EDID modes.
- The Firmware page is for upgrading the device’s firmware.
- Click Back to Profile to return to the Main page.
Chapter 4. Browser Operation

General
The General page has three settings: Fan Status, Baud Rate and Fix HDCP.

```
Fan Status & Other

Fan Speed Low

Baudrate 115200

Fix HDCP
```

Fan Status & Other
- Use the drop-down menu to set the Fan Speed: High, Medium, or Low.
- Use the Baud Rate drop-down menu to select a serial port setting.
- Check Fix HDCP to fix the time delay when switching between HDCP and non-HDCP enabled devices. This setting improves Seamless Switching with HDCP enabled.
Port Name

The Port Name page lets you name the input and output ports for easy identification.

To name an Input/Output port, enter a descriptive name of up to 16 multi-language characters (excluding ;=][+\%-?/) in the corresponding field and click Save.

Language characters available include: English, Simplified Chinese, Traditional Chinese, Korean, Japanese, German, Russian, French, Spanish, Portuguese, and Italian.

To change an Input/Output port’s name, enter another value and click Save.

Input and Output port names can be the same.

Click Reset to clear all stored names and restore the original names.

Note: The VM5404H will only have four Output Port and four Input Port fields to name.
Network

The Network page lets you configure the IP settings, website timeout, and Telnet settings for connecting to the VM5404H / VM5808H.

Enable DHCP to allow the DHCP server to assign an IP address to the VM5404H / VM5808H. Select Disable to enter your own static IP address settings for the device.

Click Reset to use the following default values:

- IP Address – 192.168.0.60
- Subnet Mask – 255.255.255.0
- Default Gateway – 192.168.0.1
- Website Timeout* – 5 minutes
- Telnet Enabled

Enter the values, then click Save. Changes may take a few seconds and after refreshing the page automatically redirects you to the IP address specified.

* This option controls how long an inactive web connection stays logged into the VM5404H / VM5808H. Use N/A to disable to option. Any changes will take effect immediately.
EDID

The *EDID Setting* page lets users view and select an EDID Mode so that the VM5404H / VM5808H can use the best resolution for its display(s).

---

**Note:** The EDID Mode can also be selected via the Front Panel pushbuttons – see *EDID Mode*, page 24.

Extended Display Identification Data (EDID) is a data format that contains a display's basic information and is used to communicate with the video source/system.
EDID Mode
In the left panel of the page, users can select a pre-configured EDID Mode using the EDID Mode radio buttons.

Select the EDID Mode to use and click Apply. The VM5404H / VM5808H uses the settings configured for that EDID mode.

Options are:

- **ATEN Default**: All ports' EDID are the same as the hardware default EDID.
- **Port 1 Mode**: All ports' EDID are the same as Port1’s EDID.
- **Remix**: All ports' EDID use the best display resolution.
- **Customized**: See Customized Mode, see page 60.
Customized Mode

Use the Customized Mode to automatically retrieve and save the EDID settings of a connected monitor/display device to an input source port.

- In the left-most panel of the page, select Customized from the EDID Mode section and click Apply.
- Port EDID Status: Select which input source port you want to store the EDID configuration (01–08).
- Retrieve EDID: Click and a pop-up window appears to retrieve the EDID settings of a stored EDID configuration: Customized EDID 01-08, or ATEN Default. Select the port to retrieve:

  ![Retrieve EDID Window]

- The right panel displays a summary of the acquired EDID settings that you can edit. Click Save and select the configuration for the Current or All Ports for the duration of the session.
EDID & CEA Description

The right panel of the screen lets users view the configuration of the EDID and CEA Modes selected:

- From the left column, click the option that you want to view and/or edit. There are two categories: **EDID** (Extended Display Identification Data) and **CEA** (Consumer Electronics Association).
- When you highlight the menu items on the left column, the right column displays the current settings for the corresponding EDID configuration. Some of the screens are read-only.
- See *Customized EDID Settings*, page 60 for more information on these two columns.
**Customized EDID Settings**

The EDID structure is comprised of 128 bytes in total – each heading shown in the left column corresponds to a specific number of bytes.

The pages for the pre-configured EDID Modes (Port 1, Default and Remix) cannot be edited. The pages for the Customized EDID, which can be edited, are discussed in the proceeding sections:

**Established Timings**

This page lists video resolutions/timings that display devices can support.

- Select the resolution(s) you want to use for the attached monitor/display device.
- Click **Clear** to deselect all the items.
- Click **Select All** to check all the items.
- Click **Save** to apply the changes.
Standard Timings
This page shows eight resolutions/timings that display devices can support in addition to those listed in the Established Timings page.

- Select the \textit{H Active Pixel} from the drop-down menu.
- Select the \textit{Aspect Ratio} from the drop-down menu.
- Click \textit{Save} to apply the changes.

Detail Timing / Display Description
This screen gives more video resolution options, and provides resolution/timing details.

In the drop down menu, choose a resolution with values that fit the attached monitor/display device and click \textit{Save}.
Monitor Description
This screen lets you specify the viewing specifications, namely horizontal and vertical scan ranges and pixel clock rate, of your monitor/display device.

Enter the values that correspond to your device and click Save to apply the changes.
CEA Settings
CEA is an extension data of the EDID structure, which further extends the standard definitions of EDID to support advanced features of monitors/display devices.

Display Support
This screen describes the display’s basic digital components.

Select the YCbCr mode applicable to your display and click Save.
Video Data
This screen lists additional video resolution/timing displays that may be supported by other devices, other than PC monitors (for example, 1080i).

- Select the native resolution of the attached display device.
- Select the resolutions that work with the attached monitor/display device.
- Click Clear All to deselect all the items.
- Click Save to apply the changes.
**Audio Data**
This screen lets you select advanced audio configurations for your device.

Use the drop down menu to select the **Audio Format** (1–6) applicable to your audio output device, and click **Save** to apply the changes.

**Detail Timing / Display Description**
This screen gives more video resolution options, and provides resolution/timing details (in addition to those specified in the EDID structure).

In the **Resolution** drop down menu, choose a resolution with values that fit the attached monitor/display device and click **Save**.
Firmware

The Firmware page lets users view information about the firmware version and upgrade it, if needed. This is an Administrator only function.

To upgrade the VM5404H / VM5808H’s firmware, do the following:

1. Use the Browse... button to locate the firmware upgrade file. Make sure you have the correct file saved on your PC.

2. Click Upgrade to start the upgrade.
User Management

Selecting User Management from the drop-down menu on the main page opens the User Management page, which lets you add, edit, or delete users and change the password for accessing the VM5404H / VM5808H’s GUI.

Note: This is an Administrator only function.

- **Add account** – Click the add button to add another user to the list. The VM5404H / VM5808H supports up to 32 users at one time (See page 68 for more details).
- **Edit** – Click a user’s edit button to change the users information. This option allows an Administrator to rename the user, set the password, add a description, and set the user’s permission level (See page 68 for more details).
- **Delete** – Click the user’s Delete button to remove the user and all user information attached to the account. The Administrator account can not be deleted.
- The default username and password are: administrator/password.
New / Edit User

Use the New / Edit User page to name a user, set the user’s password, add a description, and set the user’s permission level (see Permission Level, page 69) for accessing the VM5404H / VM5808H’s GUI.

- Fill in the username or edit an existing one.
- Enter a password and re-type the password to confirm.

**Note:** Usernames and passwords accept multi-language characters, and must be 5–16 alphanumeric characters (excluding :;=][+=?]). Passwords are case sensitive. Usernames only support lower case letters.

- Add or edit the description for the user.
- Select the permission level that you want to grant the user (see Permission Level, page 69).
- Click **Create User** to save the data.
- Click **Cancel** to discard the changes and exit.
- If a user is logged in to the VM5404H / VM5808H’s GUI, their user settings cannot be edited, and the fields in this screen are grayed out.
Permission Level
At the bottom of the New/Edit User page is the permission section, which is used to set a user’s permission level.

The three available permission levels are as follows:

- **Administrator** – this level provides full access and control of the VM5404H / VM5808H, in addition to full User Management privileges.

- **Advanced User** – this level provides full access and control with no User Management privileges.

- **Basic User** – this level only provides basic functions (connections, and open profiles).
Telnet Operation

The VM5404H / VM5808H can be operated and configured via a remote terminal session using Telnet.

To log into the VM5404H / VM5808H by means of a Telnet session, do the following:

1. On your computer, open a terminal (command line) session.
2. At the prompt, key in the VM5404H / VM5808H’s IP address in the following way:
   
   `telnet [IP address]:23`

3. Press Enter. The login screen appears. At the login prompt, provide your Username and Password.

**Note:** If a user logs on using a Username that is already in session, the newest login takes effect and the previous session is replaced.

Configuration Menu

Once a Telnet connection to the VM5404H / VM5808H is established, the device’s text-based Configuration Menu comes up, with the following items:

1. **H – Call up the command list for help**
   Command list:
   
   GT – Set gateway address
   IM – Set IP subnet mask
   IP – Set IP address
   LO – Load connections from profile *nn*
   PW – Change password
   RI – Read what input is connected to *nn* output
   RO – Read what output is connected to *nn* input
   SB – Set the serial port baud rate
   SS – Switch input to specified port
   SV – Save the current connections into profile *nn*
   TI – Set timeout
VR – Software version information
Ctrl-Q – Quit

2. GT – Set gateway address
   GT
   Old gateway address: 192.168.0.1
   New gateway address:

3. IM – Set IP subnet mask
   IM
   Old IP subnet mask: 255.255.255.0
   New IP subnet mask:

4. IP – Set IP address
   IP
   Old IP address: 192.168.0.60
   New IP address:

5. LO – Load connections from profile
   LO 01
   Load profile 01 OK.

6. PW – Change password
   PW
   Old password: ********
   New password:

7. RI – Read what input is connected to nn output
   RI 01
   Input port 02 04 08 is connected to output port 01
8. RO – Read what output is connected to nn input
   RO 01
   Output port 02 is connected to input port 01

9. SB – Set serial port baud rate
   SB 96
   Serial port baud rate is set to 9600

10. SS – Switch input to specified output
    SS 01,03
    Switch input 01 to output 03 (00: Local Port)

11. SV – Save the current connections into a profile
    SV 01
    Save the current connections into profile 01

12. TI – Set timeout
    TI 30
    Set 30 minute timeout

13. VR – Software version information
    VR
    Software version 1.0.

Note: For further information about these functions, please reference the equivalent Browser GUI functions earlier in this chapter.
Chapter 5
RS-232 Commands

Serial Control Protocol Commands

The VM5404H / VM5808H’s built-in bi-directional RS-232 serial interface allows system control through a high-end controller or PC. The RS-232 commands for the VM5404H and VM5808H are the same, with the only difference being that the VM5808H has 4 additional ports.

Configuring the Serial Port

The controller’s serial port should be configured as follows:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Baud Rate</td>
<td>19200</td>
</tr>
<tr>
<td>Data Bits</td>
<td>8</td>
</tr>
<tr>
<td>Parity</td>
<td>None</td>
</tr>
<tr>
<td>Stop Bits</td>
<td>1</td>
</tr>
<tr>
<td>Flow Control</td>
<td>None</td>
</tr>
</tbody>
</table>

Verification

After entering a command, a verification message appears at the end of the command line as follows:

- **Command OK** - indicates that the command is correct and successfully performed by the switch
- **Command incorrect** - indicates that the command has the wrong format and/or values.
**Switch Port Command**

The Switch Port command allows you to switch ports on the VM5404H / VM5808H.

The formula for the Switch command is as follows:

\[
\text{Command} + \text{Input} + \text{Number} + \text{Output} + \text{Number} + \text{Control} + [\text{Enter}]
\]

1. For example, to switch input port 02 to output port 05, type:
\[\text{sw i02 o05 [Enter]}\]

2. To switch output port 04 to the next port, type:
\[\text{sw o04 + [Enter]}\]

3. To turn off video output on port 03, type:
\[\text{sw o03 off [Enter]}\]

The following tables show the possible values for the *Switch Port* command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sw</td>
<td>Switch command</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Input Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>i</td>
<td>Input command</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Port number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>xx</td>
<td>01-08 port</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Output Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>o</td>
<td>Output command</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Port number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>yy</td>
<td>01-08 port</td>
</tr>
<tr>
<td>*</td>
<td>All output ports</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Control</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>on</td>
<td>Turn on the display</td>
</tr>
<tr>
<td>off</td>
<td>Turn off the display</td>
</tr>
<tr>
<td>+</td>
<td>Next Port</td>
</tr>
<tr>
<td>-</td>
<td>Previous Port</td>
</tr>
</tbody>
</table>
### Chapter 5. RS-232 Commands

**Note:**
1. By default, input port 01 is tied to output port 01; input port 02 is tied to output port 02; and so on until port 08 (i.e., o01 i01, o02 i02).

2. Each command string can be separated with a space.

3. The **Port Number** can be skipped, and the default value will be used.

The following table lists the available Switch Port commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Input Command</th>
<th>Input Port</th>
<th>Output Command</th>
<th>Output Port</th>
<th>Control</th>
<th>Enter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sw i xx</td>
<td>o yy *</td>
<td></td>
<td></td>
<td></td>
<td>[Enter]</td>
<td></td>
<td>Switch Input Port xx to Output Port yy (xx:01<del>08; yy:01</del>08, *)</td>
</tr>
<tr>
<td>sw o yy</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>on off</td>
<td>[Enter]</td>
<td>Turn on Output Port yy Turn off Output Port yy (yy:01~08, *)</td>
</tr>
<tr>
<td>sw o yy</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* -</td>
<td>[Enter]</td>
<td>Switch Output port yy to next Output port Switch Output port yy to previous Output port (yy:01~08, *)</td>
</tr>
</tbody>
</table>
**EDID Mode Command**

Extended Display Identification Data (EDID) is a data that contains a display's basic information and is used to communicate with the video source.

The formula for the EDID command is as follows:

**Command + Control + [Enter]**

1. For example, to use the Port 1 EDID mode, type:

   **edid port1 [enter]**

The following tables show the possible values for the **EDID** command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>edid</td>
<td>EDID Mode command</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Control</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>port1</td>
<td>Implement the EDID of the connected display to Port 1, and pass it to the video source.</td>
</tr>
<tr>
<td>remix</td>
<td>Implement the EDID of each connected display according to its connection when the VM5808H is first powered on, or immediately after selecting the Remix option.</td>
</tr>
<tr>
<td>default</td>
<td>Implements ATEN’s default EDID. (default)</td>
</tr>
<tr>
<td>customized</td>
<td>Implements the customized mode as set in the EDID system settings. (See Customized EDID Settings, page 60)</td>
</tr>
</tbody>
</table>

**Note:** Each command string can be separated with a space.

The following table lists the available EDID commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Control</th>
<th>Enter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>edid</td>
<td>port1</td>
<td>[Enter]</td>
<td>The EDID from Port 1 is passed to the video source.</td>
</tr>
<tr>
<td>edid</td>
<td>remix</td>
<td>[Enter]</td>
<td>The VM5404H / VM5808H implements the EDID of each connected display according to its connection when the VM5808H is first powered on, or immediately after selecting the Remix option.</td>
</tr>
<tr>
<td>edid</td>
<td>default</td>
<td>[Enter]</td>
<td>ATEN’s default EDID is passed to the video source.</td>
</tr>
<tr>
<td>Command</td>
<td>Control</td>
<td>Enter</td>
<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>---------</td>
<td>-------</td>
<td>---------------------------------</td>
</tr>
<tr>
<td>edit</td>
<td>custom</td>
<td>[Enter]</td>
<td>Implements the customized mode.</td>
</tr>
</tbody>
</table>
Mute Command

Mute allows you to enable or disable an output port(s) audio.

The formula for the Mute command is as follows:

Command + Output + Number + Control + [Enter]

1. For example, to mute the audio coming from output port 1, type:

   mute 001 on [enter]

The following tables show the possible values for the Mute command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mute</td>
<td>Mute command</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Output Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>o</td>
<td>Output command</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Port number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>yy</td>
<td>01-08 port (default is 01)</td>
</tr>
<tr>
<td>*</td>
<td>All output ports</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Control</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>on</td>
<td>Mute on; audio from HDMI output port is disabled</td>
</tr>
<tr>
<td>off</td>
<td>Mute off; audio output enabled (default)</td>
</tr>
</tbody>
</table>

**Note:**

1. Each command string can be separated with a space.

2. Skip the output port command to mute or enable the audio of all output ports.

The following table lists the available Mute commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Output Port</th>
<th>Control</th>

**CEC Command**

Consumer Electronics Control (CEC) allows interconnected HDMI devices to communicate and respond to the same remote control.

The formula for the CEC command is as follows:

\[ \text{Command} + \text{Output} + \text{Number} + \text{Control} + [\text{Enter}] \]

1. For example, to enable the CEC function on output port 1, type:

   `cec o01 on [enter]`

The following tables show the possible values for the CEC command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>

</tr>
</tbody>
</table>
Scaling Command

The Scaling command allows you to set a resolution for scaling the display connected to an output port.

The formula for the Scaling command is as follows:

Command + Output + Number + Control + [Enter]

1. For example, to turn scaling off for output port 02, type:

   `scaling o02 off [Enter]`

2. To set the scaling for output port 04 to 1920x1080@60Hz, type:

   `scaling o04 1080p [Enter]`

3. To set the scaling for all output ports to the connected display’s native resolution, type:

   `scaling o* native [Enter]`

The following tables show the possible values for the Scaling command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>scaling</td>
<td>Scaling command</td>
</tr>
</tbody>
</table>

<table>

</tbody>
</table>
**Fan Speed Command**

The Fan Speed command allows you to set the internal fan speed that cools the VM5404H/VM5808H.

To set the fan speed, use the following command:

\[\text{Command + Control + [Enter]}\]

1. For example, to set the internal fan to full speed, type:
   \[\text{fan turbo [Enter]}\]

2. To turn the internal fan off, type:
   \[\text{fan off [Enter]}\]

The following tables show the possible values for the **Fan Speed** command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>fan</td>
<td>Fan Speed Command</td>
</tr>
</tbody>

<td>turbo</td>
<td>[Enter]</td>
<td>Sets fan speed to full</td>
</tr>
</tbody>
</table>
**Echo Command**

The Echo function updates the RS232 controller when operations are made via the front panel pushbuttons, web browser, or telnet. The changes echo back to the RS232 controller to keep the settings in sync with the device.

The formula for the Echo command is as follows:

\[ \text{Command} + \text{Control} + [\text{Enter}] \]

1. For example, to enable the echo feature, type:
   
   `echo on [Enter]`

The following tables show the possible values for the **Echo** command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>echo</td>
<td>Echo command</td>
</tr>
</tbody>

<th>Control</th>
<th>Enter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>echo</td>
<td>on</td>
<td>[Enter]</td>
<td>Turn on Echo function</td>
</tr>
<tr>
<td>echo</td>
<td>off</td>
<td>[Enter]</td>
<td>Turn off Echo function</td>
</tr>
</tbody>
</table>
**Black Screen Command**

The Black Screen command turns a display screen black when no source signal is detected. This prevents the display from showing the default blue or other color used when no source signal is detected.

The formula for the Black Screen command is as follows:

\[ \text{Command} + \text{Control} + \text{[Enter]} \]

1. For example, to enable the Black Screen function, type:

   `blackscreen on [Enter]`

The following tables show the possible values for the Black Screen command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

**Note:** Each command string can be separated with a space.

The following table lists the available Black Screen commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Control</th>
<th>Enter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>blackscren</td>
<td>on</td>
<td>[Enter]</td>
<td>Turn on Black Screen function</td>
</tr>
<tr>
<td>blackscren</td>
<td>off</td>
<td>[Enter]</td>
<td>Turn off Black Screen function</td>
</tr>
</tbody>
</table>
**Read Command**

The Read command allows you to view the current configuration, firmware and other information about the device.

The formula for the Read command is as follows:

\[ \text{Command} + \ [\text{Enter}] \]

1. To view information about the device, type:

   \[ \text{read} \ [\text{Enter}] \]

The following table shows the possible values for the Read command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>read</td>
<td>Read command</td>
</tr>
</tbody>
</table>

**Note:** Each command string can be separated with a space.

<th>Enter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>read</td>
<td>[Enter]</td>
<td>View information about the device</td>
</tr>
</tbody>
</table>

**Reset Command**

The Reset command allows you to reset the VM5404H / VM5808H to the default factory settings.

The formula for the Reset command is as follows:

\[ \text{Command} + \ [\text{Enter}] \]

The following tables show the possible values for the Reset command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>reset</td>
<td>Reset command</td>
</tr>
</tbody>
</table>

**Note:** Each command string can be separated with a space.

<tr>
<th>Command</th>
<th>Enter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>reset</td>
<td>[Enter]</td>
<td>Resets the device settings</td>
</tr>
</tbody>
</table>
Baud Rate Command

The Baud Rate command allows you to set the RS-232 data rate for the VM5404H / VM5808H to use. Options are 9600, 19200 (default) 38400 and 115200.

The formula for the Baud Rate command is as follows:

Command + Control + [Enter]

1. For example, to set 38400 as the baud rate, type:

    baud 38400 [Enter]

The following tables show the possible values for the Baud Rate command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>baud</td>
<td>Sets the RS-232 baud rate</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

<tr>
<td>38400</td>
<td>Use 38400 baud rate</td>
</tr>
<tr>
<td>115200</td>
<td>Use 115200 baud rate</td>
</tr>
</tbody>
</table>

**Note:** Each command string can be separated with a space.

The following table lists the available Baud Rate commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Control</th>
<th>Enter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>baud</td>
<td>9600 / 19200 / 38400 / 115200</td>
<td>[Enter]</td>
<td>Sets the RS-232 baud rate</td>
</tr>
</tbody>
</table>
Save/Load Profile Command

The Save/Load Profile command allows you to save and load connection profiles. Saving profiles will save the connections currently in use.

The formula for the Save/Load Profile command is as follows:

Command + Profile + Number + Control + [Enter]

1. For example, to save the current connection configuration to profile 02, type:

   profile f 02 save [Enter]

The following tables show the possible values for the Save/Load Profile commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>profile</td>
<td>Save / Load profile</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</tbody>
</table>
OSD Command

To enable or disable the On-Screen Display (OSD) using the following command:

Command + Control + [Enter]

1. For example, to enable the OSD, type:
   
   osd on [Enter]

   The following tables show the possible values for the **OSD** command:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>

Appendix

Safety Instructions

General

- Read all of these instructions. Save them for future reference.
- Follow all warnings and instructions marked on the device.
- This product is for indoor use only.
- Do not place the device on any unstable surface (cart, stand, table, etc.). If the device falls, serious damage will result.
- Do not use the device near water.
- Do not place the device near, or over, radiators or heat registers.
- The device cabinet is provided with slots and openings to allow for adequate ventilation. To ensure reliable operation, and to protect against overheating, these openings must never be blocked or covered.
- The device should never be placed on a soft surface (bed, sofa, rug, etc.) as this will block its ventilation openings. Likewise, the device should not be placed in a built in enclosure unless adequate ventilation has been provided.
- Never spill liquid of any kind on the device.
- Unplug the device from the wall outlet before cleaning. Do not use liquid or aerosol cleaners. Use a damp cloth for cleaning.
- The device should be operated from the type of power source indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.
- The device is designed for IT power distribution systems with 230V phase-to-phase voltage.
- To prevent damage to your installation it is important that all devices are properly grounded.
- The device is equipped with a 3-wire grounding type plug. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not attempt to defeat the purpose of the grounding-type plug. Always follow your local/national wiring codes.
- Do not allow anything to rest on the power cord or cables. Route the power cord and cables so that they cannot be stepped on or tripped over.
• If an extension cord is used with this device make sure that the total of the
ampere ratings of all products used on this cord does not exceed the
extension cord ampere rating. Make sure that the total of all products
plugged into the wall outlet does not exceed 15 amperes.

• To help protect your system from sudden, transient increases and
decreases in electrical power, use a surge suppressor, line conditioner, or
un-interruptible power supply (UPS).

• Position system cables and power cables carefully; Be sure that nothing
rests on any cables.

• Never push objects of any kind into or through cabinet slots. They may
touch dangerous voltage points or short out parts resulting in a risk of fire
or electrical shock.

• Do not attempt to service the device yourself. Refer all servicing to
qualified service personnel.

• If the following conditions occur, unplug the device from the wall outlet
and bring it to qualified service personnel for repair.
  ♦ The power cord or plug has become damaged or frayed.
  ♦ Liquid has been spilled into the device.
  ♦ The device has been exposed to rain or water.
  ♦ The device has been dropped, or the cabinet has been damaged.
  ♦ The device exhibits a distinct change in performance, indicating a need
for service.
  ♦ The device does not operate normally when the operating instructions
are followed.

• Only adjust those controls that are covered in the operating instructions.
Improper adjustment of other controls may result in damage that will
require extensive work by a qualified technician to repair.
Appendix

Rack Mounting

- Before working on the rack, make sure that the stabilizers are secured to the rack, extended to the floor, and that the full weight of the rack rests on the floor. Install front and side stabilizers on a single rack or front stabilizers for joined multiple racks before working on the rack.

- Always load the rack from the bottom up, and load the heaviest item in the rack first.

- Make sure that the rack is level and stable before extending a device from the rack.

- Do not overload the AC supply branch circuit that provides power to the rack. The total rack load should not exceed 80 percent of the branch circuit rating.

- Make sure that all equipment used on the rack – including power strips and other electrical connectors – is properly grounded.

- Ensure that proper airflow is provided to devices in the rack.

- Ensure that the operating ambient temperature of the rack environment does not exceed the maximum ambient temperature specified for the equipment by the manufacturer.

- Do not step on or stand on any device when servicing other devices in a rack.
