Compliance Statements

FEDERAL COMMUNICATIONS COMMISSION INTERFERENCE STATEMENT
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

The device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution
Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Warning
Operation of this equipment in a residential environment could cause radio interference.

Achtung
Der Gebrauch dieses Geräts in Wohnumgebung kann Funkstörungen verursachen.

About this Manual

This user manual is provided to help you get the most from the VS0801HB. It covers all aspects of installation, configuration, and operation. An overview of the information found in the manual is provided below.

Chapter 1, Introduction introduces you to the 8-Port True 4K HDMI Switch. Its purpose, features, and installation considerations are described and discussed.

Chapter 2, Hardware Setup describes the panel components and the steps to quickly and safely set up the VS0801HB.

Chapter 3, Operation provides details on how to operate and configure the VS0801HB using the panel pushbuttons, IR remote control unit, and RS-232 commands.

Chapter 4, The Firmware Upgrade Utility explains how to download the VS0801HB’s firmware and upgrade the device using the utility.

An Appendix provides a list of safety instructions and precautions, contact information for ATEN technical support, product specifications, and other technical information.

Note:

- Read this manual thoroughly and follow the installation and operation procedures carefully to prevent any damage to the unit or any connected devices.

- ATEN regularly updates its product documentation for new features and fixes. For an up-to-date VS0801HB documentation, visit http://www.aten.com/global/en/
Conventions
This manual uses the following conventions:

**Monospaced** Indicates text that you should key in.

[] Indicates keys you should press. For example, [Enter] means to press the Enter key. If keys need to be chorded, they appear together in the same bracket with a plus sign between them: [Ctrl+Alt].

1. Numbered lists represent procedures with sequential steps.

• Bullet lists provide information, but do not involve sequential steps.

> Indicates selecting the option (on a menu or dialog box, for example), that comes next. For example, Start > Run means to open the Start menu, and then select Run.

⚠ Indicates critical information.

Overview

The ATEN VS0801HB is designed for applications that require routing of 8 sources to one compatible display device. The VS0801HB supports video resolutions up to true 4K (4096 x 2160 @ 60Hz 4:4:4), data rates up to 18 Gbps, 3D, Deep Color up to 12-bit, and HD lossless audio formats. The VS0801HB features different switch modes for automatic port selection and multiple control options (panel pushbuttons, RS-232 commands, IR remote control unit) are available to conveniently operate the unit, allowing for easy integration.

Engineered to meet today’s demand of true 4K signal transmission and user-oriented design, the ATEN VS0801HB is a powerful solution for a wide range of settings, such as home theater, meeting rooms, trade shows, and shopping centers.
Chapter 1. Introduction

Features

- Allows up to 8 HDMI sources to be connected to one HDMI display
- HDMI (3D, Deep Color, 4K); HDCP 2.2 compliant
- Superior video quality – True 4K resolutions of 4K x 2K @ 60 Hz (4:4:4)
  and standard 1080p (1920 x 1080 @ 60 Hz)
- Built-in bi-directional RS-232 serial port for high-end system control
- Switch modes for automatic port selection
- Supports IR extension
- Clear LED indication of device status
- Plug-and-play
- Rack Mountable
Planning the Installation

**Required Equipment**

- 1 ~ 8 source devices equipped with an HDMI Type-A connector
- 1 display device equipped with an HDMI Type-A connector
- 1 ~ 8 HDMI cables (each not exceeding 3 m) to connect the VS0801HB to source devices
- 1 HDMI cable (not exceeding 3 m) to connect the VS0801HB to the display device

**Note:**

- You can connect a DVI source to the VS0801HB via a DVI to HDMI adapter.
- ATEN strongly recommends that you use high-quality HDMI cables of appropriate length since this will affect the quality of the audio and video output. Contact your dealer to purchase the correct table sets.

**Optional Equipment**

To control the VS0801HB using RS-232 serial commands, prepare the following equipment:

- 1 hardware controller, e.g. a PC
- 1 serial cable with a 9-pin male connector

Chapter 2. Hardware Setup

**Installation**

1. Please review the safety information regarding the placement of this device in *Safety Instructions*, page 23.

2. Do not power on the VS0801HB and the connected devices until all the necessary hardware is connected.

Follow the steps below to safely connect the required devices to the VS0801HB.

1. Connect the HDMI in port of your display device to the HDMI out port on the VS0801HB using an HDMI cable.*

2. Connect the HDMI out port(s) of your source device(s) to the HDMI in port(s) on the VS0801HB using HDMI cables.*

3. Plug the provided power adapter into an appropriate AC power source, and then plug the power adapter cable into the power jack on the VS0801HB.

4. For remote control using the IR remote control unit, plug the IR receiver cable to the IR extend port.
5. To configure the VS0801HB system settings using RS-232 serial commands, connect a hardware/software controller to the RS-232 serial port on the VS0801HB.

6. Power on the VS0801HB and the connected devices.

**Note:** To ensure the output quality, make sure the HDMI cables used in this setup do not exceed 3 m.
You can operate the VS0801HB using the panel pushbuttons, the IR remote control unit, or an RS-232 serial controller. The availability of actions with the three methods is summarized in the table below.

Switching the Display Source

You can switch the display source using either the panel pushbuttons, IR remote control unit, or RS-232 serial controller:

- **Panel pushbuttons**
  Press the Port Selection Pushbutton that corresponds to the source you wish to switch to. The corresponding Port LED lights green to indicate that the source is selected.

- **IR remote control unit**
  Aim the IR remote control unit at the VS0801HB and press the corresponding Port Selection Button. Alternatively, cycle through the available sources by pressing the Port Up button to cycle forward (e.g. from source 1 to 2), and the Port Down button to cycle backward (e.g. from source 2 to 1).

- **RS-232 serial controller**
  You can switch the display to a specific source by executing RS-232 commands. For detailed steps, refer to the RS-232 Commands, page 15.

**Note:**

- Make sure to use the IR mote control unit within the effective range (6 m).
- For optimum performance, make sure there is a clear line-of-sight between the remote control unit and the connected IR receiver on the VS0801HB.
Setting the Switch Mode

You can have VS0801HB automatically switch ports for display. The VS0801HB supports the following switch modes:

<table>
<thead>
<tr>
<th>Switch Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>off mode</td>
<td>The VS0801HB does not switch ports automatically.</td>
</tr>
<tr>
<td>next mode</td>
<td>The VS0801HB switches to the next port that has a new source device connected to it.</td>
</tr>
<tr>
<td>(default)</td>
<td></td>
</tr>
<tr>
<td>priority mode</td>
<td>The VS0801HB switches to and only displays the source from a user-defined port as soon as a source is detected from the port.</td>
</tr>
<tr>
<td>POD mode</td>
<td>The Power-on Detection (POD) mode allows the VS0801HB to automatically switch to the next port with a powered-on source device when the currently connected source device is powered off. The POD mode works independently of the other switch modes.</td>
</tr>
</tbody>
</table>

Enabling/Disabling the Next Mode

Use any of the following methods to enable/disable the next mode

- Device Panel
  Put the auto switch to **ON** or **Off** to enable or disable the next mode respectively.

- RS-232 serial controller
  Send an RS-232 command from the serial controller. For detailed steps, refer to the "Setting the Switch Mode", page 13.

**Note:**

When the auto switch is put to **ON**, the VS0801HB will remain in next mode regardless of any RS-232 commands to set the unit into other switch modes.

Enabling/Disabling the Priority and the POD Mode

Send an RS-232 command from the serial controller. For detailed steps, refer to the "Setting the Switch Mode", page 13.
Enabling/Disabling the Standby Mode

The standby mode is a low-power mode where the port selection pushbuttons, port LEDs, and IR receiver are disabled. To enable standby mode, press the Power button on the device panel; press again to disable the standby mode. When the standby mode is enabled, the port LEDs are immediately turned off, and the Power LED lights green.

Executing an RS-232 Command

1. Make sure you have connected a hardware device (e.g. PC) to the VS0801HB. For information on device requirements and installation, see Optional Equipment, page 3 and Installation, page 8 respectively.

2. Send the command from your serial controller. For details on RS-232 commands, see RS-232 Commands, page 15.

Restarting the VS0801HB

Make sure to follow the steps below to safely restart the VS0801HB.

1. Power off the attached devices.

2. Unplug the power adapter cable from the VS0801HB.

3. Wait 10 seconds, and then replug the power adapter cable

4. After the VS0801HB is powered on, power on the attached devices.

Note:

When the VS0801HB is restarted, it selects the first port detected with a powered-on source.

The Firmware Upgrade Utility

Introduction

The purpose of the Windows-based Firmware Upgrade Utility is to provide an easy process for upgrading the VS0801HB. The program comes as part of a Firmware Upgrade Package that is specific for each device.

As new firmware versions become available, new firmware upgrade packages are posted on our website. Check the website regularly to find the latest information and packages.

Downloading the Firmware Upgrade Package

To download the firmware upgrade package:

1. On our Website go to: Download - Firmware and choose the device model, or from the VS0801HB product page under the Resources tab, select Firmware. A list of available firmware upgrade packages appears.

2. Choose the firmware upgrade package that you wish to install (usually the most recent) and download it to your computer.
Preparation

To prepare for the firmware upgrade, do the following:

1. Use an RS-232 cable to connect a COM port on your computer to the RS-232 serial port of your VS0801HB.

2. Unplug the VS0801HB’s power adapter.

3. Press and hold the port 1 selection pushbutton located on the VS0801HB’s front panel, and plug the power adapter into the VS0801HB to power on the unit.

4. If successful, all the port LEDs will start to flash and you can start the upgrade process as explained on the next page.
Starting the Upgrade

To upgrade the firmware:

1. Run the downloaded firmware upgrade package file either by double-clicking the file icon.
   The Firmware Upgrade Utility welcome screen appears:

   ![Firmware Upgrade Utility welcome screen](image)

   **Note:** The screens shown in this section are for reference only. The wording and layout of the actual screens put up by the Firmware Upgrade Utility may vary slightly from these examples.

2. Read and **Agree** to the License Agreement (click the *I Agree* radio button).
3. Click Next to continue. The Firmware Upgrade Utility main screen appears. The devices capable of being upgraded are listed in the Device List panel:

4. Click Next to perform the upgrade. The Port LEDs 1, 3, and 4 will flash while the upgrade is in process.
   If you enabled Check Firmware Version, the Utility compares the device's firmware level with that of the upgrade files. If it finds that the device's version is higher than the upgrade version, it brings up a dialog box informing you of the situation and gives you the option to continue or cancel.

   If you didn't enable Check Firmware Version, the Utility installs the upgrade files without checking whether they are a higher level, or not. Status messages appear in the Status Messages panel, and the progress toward completion is shown on the Progress bar.
Chapter 4. The Firmware Upgrade Utility

## Upgrade Succeeded

After the upgrade has completed, all port LEDs will stop flashing and a screen appears to inform you that the procedure was successful:

Click **Finish** to close the *Firmware Upgrade Utility*.

## Upgrade Failed

If the *Upgrade Succeeded* screen doesn't appear, it means that the upgrade failed to complete successfully. See the next section, *Firmware Upgrade Recovery*, for how to proceed.
Firmware Upgrade Recovery

There are three conditions that call for firmware upgrade recovery:
- When a firmware upgrade is manually aborted.
- When the mainboard firmware upgrade fails.
- When the I/O firmware upgrade fails.

To perform a firmware upgrade recovery, do the following:
1. Power off the device.
2. Connect the RS-232 cable to the RS-232 Serial Port.
3. Repeat the upgrade procedure.
Appendix

Safety Instructions

General
- This product is for indoor use only.
- Read all of these instructions. Save them for future reference.
- Follow all warnings and instructions marked on the device.
- Do not place the device on any unstable surface (cart, stand, table, etc.). If the device falls, serious damage will result.
- Do not use the device near water.
- Do not place the device near, or over, radiators or heat registers.
- The device cabinet is provided with slots and openings to allow for adequate ventilation. To ensure reliable operation, and to protect against overheating, these openings must never be blocked or covered.
- The device should never be placed on a soft surface (bed, sofa, rug, etc.) as this will block its ventilation openings. Likewise, the device should not be placed in a built in enclosure unless adequate ventilation has been provided.
- Never spill liquid of any kind on the device.
- Unplug the device from the wall outlet before cleaning. Do not use liquid or aerosol cleaners. Use a damp cloth for cleaning.
- The device should be operated from the type of power source indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.
- To prevent damage to your installation it is important that all devices are properly grounded.
- Do not allow anything to rest on the power cord or cables. Route the power cord and cables so that they cannot be stepped on or tripped over.
- Position system cables and power cables carefully; Be sure that nothing rests on any cables.
Appendix

- Never push objects of any kind into or through cabinet slots. They may touch dangerous voltage points or short out parts resulting in a risk of fire or electrical shock.
- Do not attempt to service the device yourself. Refer all servicing to qualified service personnel.
- If the following conditions occur, unplug the device from the wall outlet and bring it to qualified service personnel for repair.
  - The power cord or plug has become damaged or frayed.
  - Liquid has been spilled into the device.
  - The device has been exposed to rain or water.
  - The device has been dropped, or the cabinet has been damaged.
  - The device exhibits a distinct change in performance, indicating a need for service.
  - The device does not operate normally when the operating instructions are followed.
- Only adjust those controls that are covered in the operating instructions. Improper adjustment of other controls may result in damage that will require extensive work by a qualified technician to repair.
Rack Mounting

- Before working on the rack, make sure that the stabilizers are secured to the rack, extended to the floor, and that the full weight of the rack rests on the floor. Install front and side stabilizers on a single rack or front stabilizers for joined multiple racks before working on the rack.
- Always load the rack from the bottom up, and load the heaviest item in the rack first.
- Make sure that the rack is level and stable before extending a device from the rack.
- Use caution when pressing the device rail release latches and sliding a device into or out of a rack; the slide rails can pinch your fingers.
- After a device is inserted into the rack, carefully extend the rail into a locking position, and then slide the device into the rack.
- Do not overload the AC supply branch circuit that provides power to the rack. The total rack load should not exceed 80 percent of the branch circuit rating.
- Make sure that all equipment used on the rack – including power strips and other electrical connectors – is properly grounded.
- Ensure that proper airflow is provided to devices in the rack.
- Ensure that the operating ambient temperature of the rack environment does not exceed the maximum ambient temperature specified for the equipment by the manufacturer.
- Do not step on or stand on any device when servicing other devices in a rack.

Limited Warranty

ATEN warrants its hardware in the country of purchase against flaws in materials and workmanship for a Warranty Period of two [2] years (warranty period may vary in certain regions/countries) commencing on the date of original purchase. This warranty period includes the LCD panel of ATEN LCD KVM switches. Select products are warranted for an additional year (see A+ Warranty for further details). Cables and accessories are not covered by the Standard Warranty.

What is covered by the Limited Hardware Warranty

ATEN will provide a repair service, without charge, during the Warranty Period. If a product is defective, ATEN will, at its discretion, have the option to (1) repair said product with new or repaired components, or (2) replace the entire product with an identical product or with a similar product which fulfills the same function as the defective product. Replaced products assume the warranty of the original product for the remaining period or a period of 90 days, whichever is longer. When the products or components are replaced, the replacing articles shall become customer property and the replaced articles shall become the property of ATEN.
