

CHRISTIE® ENERGY ⚡ GUIDE

Product category

ProAV

High brightness projection

Lumens: 25,300 ISO

Series/model

M 4K25 RGB

M 4K+25 RGB

Efficiency - Lumens per watt

31% 

Estimated yearly operational cost-savings over the leading competitor model

 **6,140**
BTU/hour

 **Best in class**

Here's how we calculate these results:

We calculate energy efficiency as lumens/watt: The maximum power consumption of the projector model at 77 F (25 C) required for the total available brightness in lumens.

We calculate BTU load as the amount of air that needs to be extracted from the projector's environment for adequate system cooling.

We calculate the cost of operation on the projector model's efficiency, which depends on your local utility rates and use.

Any questions

For a detailed breakdown on how much you can save on operating costs using this projector, go to christiedigital.com and click Contact.
