

USB 3.2 Gen 1 Active Extension Cable - USB-C to USB-A (M/F), 5 Gbps, Data Only, 5 m (16.4 ft.)

MODEL NUMBER: U330-05M-C2A

Active 16 ft. extension cord increases the distance between 2 connected USB devices, including Chromebooks, without signal loss.

Features

5 m Extension Cable Connects Computers, Printers, Modems and Other USB Equipment This USB-C to USB-A Active Extension Cable (M/F) attaches to your current USB 3.0 cable to extend it by 16.4 feet (5 meters). It connects your computer, tablet, notebook, MacBook, Chromebook, smartphone or other compatible USB-C device to a USB-A keyboard, printer, portable hard drive, patch panel or other peripheral. The 16.4-foot length allows you great flexibility in placing equipment.

Built-In Signal Booster for Peak Performance Just connect the active cable's USB-C plug to your computer's USB port and the USB-A female connector to a USB device cable to extend your total connection beyond USB's natural 16.4-foot limit. The bus-powered signal booster ensures USB 3.1 Gen 1 data transfer speeds up to 5 Gbps with no signal loss. The cable is backward compatible with previous USB generations, so you can use it with legacy equipment.

770mA of Proper Power to Keep Devices Functioning The U330-05M-C2A works with standard USB 3.0 cables and provides up to 770mA of power to a connected device. For power applications stronger than 770mA, you must connect a compatible DC 5V external power supply with a barrel connector of 3.5 x 1.35 x 7.5 mm; positive pin, negative sleeve (sold separately).

Reversible USB-C Connector Attaches in Either Direction Unlike traditional USB cables that connect in only one direction, the reversible USB-C male connector plugs into a USB-C port in either direction for a fumble-free connection every time.
