THE FAIRMOUNT 20-IN. ELECTRIC COMMUTER BIKE WITH THUMB THROTTLE AND PEDAL ASSIST

Go farther, faster with the Fairmount 20-in. electric commuter bike with thumb throttle and pedal assist. This sleek, aluminum frame e-bike has everything you want from a bike, like sturdy Kenda tires and 1-8 Shimano Drivetrain—plus extra electric power. The Fairmount features pedal assist and electric thumb throttle technology to take the strain out of traditional biking. Cycling to work is a money-saving and environmentally-friendly alternative to cars, but brings the downside of showing up to work sweaty and disheveled. Use the Fairmount's easy to control, premium features to give you an extra boost of power so you can arrive at work without breaking a sweat. There are three levels of pedal assist to give you just the right boost of electric power to help you along as you pedal. Don't feel like pedaling? Then use the fully automatic thumb throttle to take you where you need to go, no pedaling required. Use them to ride faster, climb hills with ease and save your joints by putting less pressure on your knees and hips. The powerful battery allows the bike to run for up to 4 hours or between 35-50 miles using pedal assist and up to two hours or 20-30 miles using the throttle. Go farther without limits with FreeForce.
