The AC25 is an ultra-compact fullrange loudspeaker system designed to provide maximum bandwidth and SPL in a single system package and yet be visually unobtrusive. The enclosure design allows for installation very close to walls and ceilings making it an ideal choice for under balcony, column, or wall mounting. The high frequency device is a 1" dome tweeter integrated into a newly designed 90° x 90° waveguide providing even coverage throughout the intended usage area. The combination exhibits smooth power response resulting in extremely natural voicing. The AC25 utilizes dual 5.25" Symmetrical Field Geometry (SFG[™]) LF Transducers each with a copper-clad aluminum edge wound 1.5" voice coil and a copper-capped pole piece that improves performance by reducing voice coil inductance and distortion. In addition Filtered Array Technology (FATTM) is utilized to independently control the dual woofers for magnitude and phase response resulting in smoother power response and constant coverage.

The rugged multiply hardwood enclosure is designed to work in the vertical plane as well as in the horizontal plane. Mounting points are provided for an optional U-bracket and for an OmniMount[®] type bracket.

The rugged plywood enclosure features JBL's textured DuraFlex[™] finish and is equipped with a heavy duty powder coated steel, foam-backed grille.
