Product Overview:

The LP-51-IR receiver pack gives you a convenient way to purchase all of the equipment needed to begin offering IR assistive listening or expand your existing system to accommodate more clients and customers. The package includes twelve (12) LR-5200-IR iDSP advanced personal receivers and one LA-381 Intelligent 12-unit charging tray, as well as neck loops/lanyards for each receiver and more.

The LR-5200-IR iDSP receiver from Listen Technologies is the smallest device of its kind, giving users a lightweight and convenient way to utilize your assistive listening technology. Each high-performance receiver offers unmatched sensitivity, range, and clarity, and the advanced green battery technology makes it more convenient and affordable for businesses and venues.

Each receiver features an OLED display for clearly communicating the channel name and status, battery charge level, and volume level. A programmable channel select button lets users cycle through the available/active channels, and the micro USB connection allows for easy setup, programming, and firmware updates.

The LA-381 drop-in charging/dispensing station for the Listen iDSP receivers provides a convenient way to charge, store, dispense, and collect ListenIR receivers. The tray accommodates all twelve (12) of the receivers included with the package, providing plenty of storage and charging capacity.

Get everything you need to offer industry-leading IR assistive listening to your customers, clients, visitors, and more with the LP-51-IR Advanced iDSP IR Receiver 12-pack from Listen Technologies.
