Stunning projection with flexible installation

Experience bright 5,000 lumen 1080p projection with the lamp-less Optoma ProScene ZH500T. Laser phosphor technology eliminates the need for lamp and filter replacements for 20,000 hours of low-cost and virtually maintenance-free operation.

Its low weight and quiet operation make it perfect for boardrooms, higher education, houses of worship and smaller entertainment venues. Horizontal and vertical lens shift, four corner correction, 360° and portrait mode operation enable flexible installations.

A variety of inputs, including HDBaseT and HDMI, enable simple connections to a wide variety of video sources. HDBaseT connectivity facilitates easy installations, enabling long cable runs of up to 328 feet for audio, video and control from a single CAT6 cable.

Light source life is dependent on brightness mode, display mode, operational environment and more. Light source brightness can decrease over time.

Watching 3D projection while wearing 3D glasses for an extended period of time may cause headaches or fatigue. If you experience a headache, fatigue or dizziness, stop viewing the 3D projection and rest.

Portrait orientation must follow the recommended positions. Please consult the user manual for further details.
