HD-ONE LX

This HDBaseT extender uses 3Play™ technology to send HDMI 1.4 digital video, RS-232/IR and analog stereo audio as far as 100m on a single Cat.6 cable. IR control offers three frequency settings for greater compatibility with a variety of IR systems. The HD-ONE LX is fully HDCP compliant and supports embedded digital audio.

1T-CT-551/552

This DVI Extension solution utilizes HDBaseT technology to transmit DVI-D WUXGA (1920x1200) computer signals up to 100m over a single Cat.5/.6 cable. Control signals can also be managed (Ethernet, Infrared or RS-232), and PoH (Power over HDBaseT) allows powering of the Receiver from a PoH supporting Transmitter (1T-CT-551, 1T-CT-653, MX-8488).

1T-CT-641/642

This economical HDMI v1.4 extension system utilizes HDBaseT-Lite technology to allow transmission of uncompressed, 1080p video signals up to 60m over a single Cat.5/6 cable. Embedded digital audio is supported and the system is fully HDCP compliant.

1T-CT-647

This HDBaseT-Lite 7-port transmitter is for use with 1T-CT-642 Receivers (each purchased separately) which employs HDMI v1.4 capability. Embedded digital audio is supported and the system is fully HDCP compliant.

1T-CT-653/654A

Extend HDMI up to 100m on a single Cat.5/6 cable using HDBaseT 5Play™ technology. HDMI v1.4 signals - including 3D and 4k UHD formats - are supported with most embedded audio. In addition, control signals can be passed via Ethernet, Infrared or RS-232, and support for Power over HDBaseT (PoH) allows the Receiver to be powered by a PoH Transmitter (1T-CT-653, MX-8488) if a local power connection is not available.

MultiView II DVI

This UTP digital video extension system is compatible with the entire MultiView™ family of distribution and switching products. It extends DVI/HDMI video signals over standard twisted-pair cable to lengths up to 1000ft (305m). There are user-configurable settings for video, audio, and serial options which can be controlled from the front panel.

This system also allows the daisy-chaining of numerous receivers from a single transmitter, so it is ideal for extended digital signage systems.

Voyager CFS

These units support the transmission of up to 1920x1200 uncompressed video (either HDMI w/ HDCP or DVI), plus audio and serial to distances of 6,600 feet over multimode fiber. While it ships with one MMF SFP standard, the transmitter features a second port that, when populated with a second SFP, introduces a variety of signal distribution options. For example, users could cascade signals to a second transmitter, or feed a second grouping of Voyager receivers which can be daisy-chained.
