**6x6 HDBaseT Matrix Switcher with HDMI Mirror Outputs, Bidirectional IR, Routed RS-232 and PoH**

**MX-0606-PP-POH v1**

**Quickstart Guide**

**In the Box**
1x MX-0606-PP-POH Matrix Switcher
1x IR Remote Handset
1x IR Receiver (38kHz)
6x Wide-band IR Receivers (30-50kHz)
6x IR Emitters
1x 100~240V AC 50/60Hz Power Cord with US Plug
1x 100~240V AC 50/60Hz Power Cord with UK Plug
1x 100~240V AC 50/60Hz Power Cord with EU Plug
2x Mounting Brackets
1x Quickstart Guide (this document)

**Basic Wiring Diagram**

**Key**
- HDMI/Digital Video
- HDBaseT/Ethernet
- IR
- RS-232

**Additional Information**
This Quickstart Guide provides the basic steps for the common uses of this product. Detailed installation and configuration information may be found in the download tab located on the product page.

- WebUI Reference Guide – Setup for advanced Matrix features such as IP and testing of connections
- Drivers and API – Preconfigured drivers for popular control systems and API document.

**Before Beginning**
- WyreStorm recommends visiting the product page before installing this product for updates to this Quickstart Guide as well as other information about the product.
- Verify that all items are included in the packaging per the In the Box list.

**Pre Wire**
1. Run a Cat5e/6/6a cable from the matrix location to the receiver location. See for resolution distance restrictions. Terminate the cable per the HDMI/HDBaseT Wiring section.
2. (Optional) If using IR emitters or connecting blocks, run the wire and terminate per the IR TX (Emitter) Wiring section.
3. (Optional) If using IR receivers, run the wire and terminate per the IR RX (Receiver) Wiring section.
4. (Optional) If using RS-232 pass-through, run the wire and terminate per the RS-232 Wiring section.

**Installation**
1. Connect the output of an HDMI source to an HDMI In on the matrix using a cable from a high quality brand such as WyreStorm Express. Repeat for additional sources.
2. Using the cable created in Pre Wire step 1, connect the 8-pin RJ-45 female plug to the HDBT Out jack on the matrix. Repeat for additional HDBaseT receivers.
3. (Optional) Using the included IR emitter or the cable created in Pre Wire step 2, place an IR emitter onto a source device near the device's IR sensor. Connect the 3.5mm (1/8in) Mono Plug to an IR TX port. Repeat for additional sources.
4. (Optional) Using the included IR receiver, connect the 3.5mm (1/8in) Stereo Plug to an IR RX (IR to Zone) port. If using a control system, use the WyreStorm CAB-IR-LINK or the cable created in Pre Wire step 3. Repeat for additional zones.
5. (Optional) Using an included IR receiver, connect the 3.5mm (1/8in) Stereo Plug to an IR Ext port. If using a control system, use the WyreStorm CAB-IR-LINK or the cable created in Pre Wire step 3.
6. (Optional) Using the cable created in Pre Wire step 4, connect the 9-pin DB9 male jack to the RS-232 port on the matrix and the opposite end to an RS-232 control system.
7. Install HDBaseT receivers (RX-70-POH recommended) following the instructions provided with the model being installed.
### Front Panel

**Output Channel Indicator**
- 1-6 (6x6) or 1-8 (8x8)
- Displays the source input number currently selected for the corresponding output number.

**IR Sensor**
- Receives IR signals from included handheld IR remote or attached emitter from IR control system for switcher control.

**Source/Output Navigation**
- **Left/Right:** Output Selection
- **Up/Down:** Input Selection
- **Enter:** Confirm Selection

### Rear Panel

**Power Input**
- 8-pin RJ-45 female
- Connect to the HDBT In of an HDBaseT receiver. See HDMI/HDBaseT Wiring for important wiring guidelines.
  
  **HDBT Out LED Operation**
  - **Green Solid:** HDBaseT link has been established with the receiver.
  - **Green Flashing or Off:** HDBaseT link has NOT been established with the receiver.
  - **Amber Flashing:** HDBaseT functioning normally and can establish a link with the receiver.
  - **Amber Off:** HDBaseT has discovered a fault and cannot establish a link with the receiver.

**HDMI IN/Out**
- 19-pin type A HDMI female:
  - Supports HDMI and DVI/D (requires adapter-not included). See HDMI/HDBaseT Wiring for important wiring guidelines.

**IR RX/Ext/TX**
- **IR RX/Ext - 3.5mm (1/8in) Stereo Jack:**
  - Connect to an IR receiver for matrix control (Ext) or IR pass-through (RX) via HDBaseT.
- **IR TX - 3.5mm (1/8in) Mono Jack:**
  - Connect to an IR emitter to control a local device from the remote display location via HDBaseT. See IR Wiring.

**Power**
- Power Switch: 0 – Power Off / I – Power On
- Fuse Holder
- IEC Power Cord Port

**LAN**
- 8-pin RJ-45 female | 10/100 Mbps auto-negotiating
- Connect to a network router or switch for accessing the Web UI or matrix control via IP.

**RS-232**
- 9-pin DB9 Female
- Used to control the matrix functions and firmware updates. See RS-232 Wiring.

**EDID**
- 4 Position Dipswitch:
  - Used to set EDIDs to correct resolution conflicts between the source and the display. See EDID Settings.
HDMI/HDBaseT Wiring

**IMPORTANT! Wiring Guidelines**

- The use of patch panels, wall plates, cable extenders, kinks in cables, and electrical or environmental interference can have an adverse effect on HDMI or HDBaseT transmission limiting performance. Steps should be taken to minimize these factors (or remove completely) during installation for best results.
- While similar in nature, the HDBaseT protocol is different than Ethernet and voltages provided for PoH can be higher than those provided by PoE. For this reason, never connect an HDBaseT link to an Ethernet router or switch to avoid damaging the connected devices.

Wiring for HDBaseT follows the EIA T568B standard.

![HDMI/HDBaseT Wiring Diagram](image)

Wire colors shown follow EIA/TIA-568B standard.

**Resolutions Distances**

The type of category cable used and the distance between the matrix and receiver can restrict the available video resolution. Refer to Video Resolutions in the Specifications table for the max distance based on resolution.

**IR Wiring**

**IR TX (Emitter) Wiring**

Connection for IR TX (transmit) uses a 3.5mm (1/8in) mono plug.

<table>

<td>White/Green</td>
<td>Blue</td>
<td>White/Blue</td>
<td>Green</td>
<td>White/Brown</td>
<td>Brown</td>
</tr>
</tbody>
</table>

**IR RX (Receiver) Wiring**

Connection for IR RX (receive) uses a 3.5mm (1/8in) stereo jack that outputs +5V DC to power the included IR receiver.

**IMPORTANT! IR TX Connection Guidelines**

3rd party IR receivers may require a different voltage, refer to the documentation provided with the IR receiver before making any connections to avoid damaging the device.

**RS-232 Wiring**

**RS-232 Connection Guidelines**

The following wiring diagram shows the pinouts for the extender set. While not shown, connect the TX (transmit) to RX (receive) pins at the control system or PC side of the cable.

Most control systems and computers are DTE where pin 2 is RX, this can vary from device to device. Refer to the documentation for the connected device for pin functionality to ensure that the correct connections can be made.

EDID Settings

EDIDs can be configured to resolve issues with video output on displays that may not accept the maximum resolution available from the source.

- When set to Smart EDID (default) the matrix will scan all selected displays for the lowest resolution.
- When EDID Copy or a direct EDID is being used, SmartEDID is turned Off.
- Ensure that a display is connected and powered On to the selected output before copying EDIDs or the copy will fail. When this occurs, EDID will be set to 1080p @60Hz 2ch.
- Power to the matrix must be cycled (Off/On) after changing dip switches in order for the setting to take effect.
- Grayed out switches in the diagrams below can be in any position for the identified EDID.

**Copying EDIDs**

1. Set the EDID dipswitch to EDID Copy (all switches down).
2. Reboot the matrix.
3. Using the front navigation buttons, select the input port for the output. Example: Input 2 for Output 2
4. Once the output port indicator blinks, press and hold Enter for 5 seconds. An OK message on the display indicates that the copy was successful, an FL-2 indicates that the copy failed.
5. Reboot the matrix.
## Warranty Information

This product is covered by a 3 year limited parts and labor warranty. During this period there will be no charge for unit repair, component replacement or complete product replacement in the event of malfunction. The decision to repair or replace will be made by the manufacturer. This limited warranty only covers defects in materials or workmanship and excludes normal wear and tear or cosmetic damage.

Visit the product page located at [wyrestorm.com](http://wyrestorm.com) for additional information on this product including important technical information not provided in this document and warranty terms & conditions.

#### Troubleshooting

### No or Poor Quality Picture (snow or noisy image)

- Verify that power is being supplied to the matrix and receiving device and that both devices are powered on.

**Note:**

When using PoH, to power the receivers, verify that the HDBaseT cable is properly terminated per the HDMI/HDBaseT Wiring section.

Verify that the transmitter, matrix/receiver, and display support the output resolution of the source. Refer to Video Resolutions in the Specifications table for the max distance based on resolution.

- Configure EDID Settings to a lower resolution.
- If transmitting 3D or 4K, verify that the HDMI cables used are 3D and/or 4K rated.
- Verify that the HDBaseT cable is properly terminated per the HDMI/HDBaseT Wiring section.
- Verify that all source and HDBaseT connections are not loose and are functioning properly.

### No or Intermittent 3rd party Device Control

- Verify that IR and RS-232 cable(s) are properly terminated per the appropriate wiring section.
- Verify that the IR emitter is located over or near the IR sensor on the device. Move the emitter closer or further from the sensor as the IR signal can be too strong in some cases.
- Verify that the IR receiver is in line of sight of the handheld remote.

**Troubleshooting Tips:**

- WyreStorm recommends using a cable tester or connecting the cable to other devices to verify functionality.
- Use a flashlight to locate the IR receiver behind any tinted panels on the device being control.
